

Formulas

$$WLL = D^2 \times 8$$

$$L/H \times W/2$$

$$\text{FORMULA: } C = \pi D$$

$$\text{FORMULA: } \left(\frac{D+d}{2}\right) \pi + 2C$$

$$\text{TEMPERATURE CHANGE} \times 7.2 \times 10^{-6} \times \text{DISTANCE}$$

$$10^{-6} \times \Delta T \times L$$

$$\text{hp} = (\text{gpm} \times \text{psi}) / 1714 \text{ (constant)}$$
