# Atlantic Apprenticeship Curriculum Standard Sprinkler Fitter

# PLAN OF TRAINING

# Atlantic Apprenticeship Curriculum Standard

# **Sprinkler Fitter**

March, 2019

Government of Newfoundland and Labrador Department of Advanced Education, Skills and Labour Apprenticeship and Trades Certification Division

Approved by:

Chairperson, Provincial Apprenticeship and Certification Board

Date: Warch 20,2019

#### **Preface**

This Atlantic Apprenticeship Curriculum Standard is intended to assist instructional staff in the design and delivery of technical, in-class training in support of the Sprinkler Fitter program.

This document contains all the technical training elements required to complete the Sprinkler Fitter apprenticeship program and has been developed based on the 2017 Red Seal Occupational Standard (RSOS). The RSOS can be found on the Red Seal website (<a href="https://www.red-seal.ca">www.red-seal.ca</a>).

Implementation of this AACS for Apprenticeship training is outlined in the following table.

Level	Implementation Effective	
Level 1	2019/2020	
Level 2	2020/2021	
Level 3	2021/2022	

<sup>\*\*</sup> The above implementation schedule was current at time of printing. Please **confirm** with Apprenticeship Staff prior to commencing training.

Granting of credit or permission to challenge level examinations for pre-employment or pre-apprenticeship training for the Sprinkler Fitter trade will be based on the content outlined in this standard. Training providers must contact their provincial apprenticeship authority for more information on the process and requirements for determining eligibility for credit towards an apprenticeship program. Programs which have been deemed acceptable by the jurisdictional apprenticeship authority will be identified in transfer credit matrix developed through the Atlantic Apprenticeship Harmonization Project.

## Acknowledgements

The development of the Atlantic Apprenticeship Curriculum Standard (AACS) is an initiative of the Atlantic Apprenticeship Council's Atlantic Apprenticeship Harmonization Project (AAHP) through the Atlantic Workforce Partnership and Employment and Social Development Canada.

The Atlantic Apprenticeship Council wishes to acknowledge the contributions of the following industry and instructional representatives on the Atlantic Trade Advisory Committee (ATAC) who participated in the development of this document in June, 2018.

Edwin Corcoran New Brunswick
Bernard Furlong New Brunswick
Jamey Brown New Brunswick

Peter Russell Newfoundland and Labrador
Dan Whelan Newfoundland and Labrador

Victor Pettipas Nova Scotia Ryan Rees Nova Scotia Jamie Brightman Nova Scotia

Ryan Callaghan Prince Edward Island Brent MacLeod Prince Edward Island

Advisory committees, industry representatives, instructors and apprenticeship staff provided valuable input to the development of this document. Without their dedication to quality apprenticeship training, this document could not have been produced.

#### **User Guide**

Atlantic Apprenticeship Curriculum Standards (AACS) are developed based on Red Seal Occupational Standards (RSOS), National Occupational Analyses (NOA), Interprovincial Program Guides (IPG), if available, and extensive industry consultation. This document represents the minimum content to be delivered as part of the harmonized Atlantic program for the Sprinkler Fitter trade.

The AACS's are deliberately constructed for ease of use and flexibility of structure in order to adapt to all delivery requirements. They detail units of training, unit outcomes and objectives. They do not impose a delivery model or teaching format.

Jurisdictions and/or training providers will select and develop delivery materials and techniques that accommodate a variety of learning styles and delivery patterns. The AACS does not dictate study materials, textbooks or learning activities to be used in delivery.

The document includes a Level Structure to facilitate mobility for apprentices moving from one jurisdiction to another.

#### Structure

The content of the AACS is divided into units. Unit codes are used as a means of identification and are not intended to convey the order of delivery. It is at the discretion of the training provider to deliver the content in the required logical sequence of delivery within the level. Jurisdictions are free to deliver units one at a time or concurrently within a level, provided all outcomes are met.

The Learning Outcomes describe what the apprentice should know or be able to do at the end of training. Wording of the Learning Outcomes, "Demonstrate knowledge of..." acknowledges the broad spectrum of ways in which knowledge can be assessed (i.e. practical projects, multiple choice testing, presentations, etc.) by instructional staff within the training.

Summative evaluation will be through a multiple-choice Level Examination administered through the jurisdictional Apprenticeship Authority.

#### **User Guide** (continued)

The 2017 Red Seal Occupational Standard References (RSOS) to AACS Comparison chart outlines the relation between each RSOS sub-task and the AACS units. RSOS References have also been detailed in each unit to highlight the direct link between the unit and relevant sub-tasks in the RSOS.

In the Level Structure section, the document identifies suggested hours in order to provide an indication of the time it should take to cover the material in the unit and is provided as a guide only. Adjustments to the suggested hours for each unit may be required to account for rate of apprentice learning, statutory holidays, storm days, registration and examinations. These suggested hours detailed for each unit will represent both theory and practical training (if relevant) and for consistency will be based on a standard of 30 hours per week of training. The true length of time required to deliver an outcome successfully will depend upon the learning activities and teaching methods used.

There are two types of objectives found in the AACS document: theoretical and practical.

The theoretical objectives represent the material that is to be covered during the technical training in order to convey the required knowledge to the apprentice.

The practical objectives represent the tasks or skills that have been deemed by the Atlantic Trade Advisory Committee as critical for the apprentices to receive exposure to while attending technical training. For example, exposure could be done through instructor demonstration or individual or group performance of the skill or task. Training providers are encouraged to use practical demonstration and opportunities for hands-on learning whenever possible. Practical objectives are not intended to replace the on-the-job training component of the apprentice's program or to mirror or replace the logbook skills that are to be taught and evaluated in the workplace.

Detailed content for each objective has not been developed. Where detail is required for clarity, content has been provided.

## **Glossary of Terms**

These definitions are intended as a guide to how language is used in the document.

**ADJUST** To put in good working order; regulate; bring to a proper

state or position.

**APPLICATION** The use to which something is put and/or the circumstance

in which an individual would use it.

**CHARACTERISTIC** A feature that helps to identify, tell apart or describe

recognizably; a distinguishing mark or trait.

**COMPONENT** A part that can be separated from or attached to a system; a

segment or unit.

**DEFINE** To state the meaning of (a word, phrase, etc.).

**DESCRIBE** To give a verbal account of; tell about in detail.

**EXPLAIN** To make plain or clear; illustrate; rationalize.

**IDENTIFY** To point out or name objectives or types.

**INTERPRET** To translate information from observation, charts, tables,

graphs and written material.

**MAINTAIN** To keep in a condition of good repair or efficiency.

**METHOD** A means or manner of doing something that has procedures

attached to it.

**OPERATE** How an object works; to control or direct the functioning of.

**PROCEDURE** A prescribed series of steps taken to accomplish an end.

**PURPOSE** The reason for which something exists or is done, made or

used.

# **Glossary of Terms** (continued)

**SERVICE** Routine inspection and replacement of worn or deteriorating

parts.

An act or business function provided to a customer in the

course of an individual's profession (e.g., haircut).

**TECHNIQUE** Within a procedure, the manner in which technical skills are

applied.

TEST v. To subject to a procedure that ascertains effectiveness,

value, proper function or other quality.

n. A way of examining something to determine its

characteristics or properties, or to determine whether or not

it is working correctly.

#### **Essential Skills Profile**

Through extensive research, the Government of Canada and other national and international agencies have identified and validated key essential skills for the workplace. These skills are used in nearly every job and at different levels of complexity. They provide the foundation for learning all other skills and enable people to evolve with their jobs and adapt to workplace change.

Essential Skills Profiles describe how workers in various occupations use each of the key essential skills. They include:

- a brief description of the occupation;
- examples of tasks that illustrate how each essential skill is applied; and,
- complexity ratings that indicate the level of difficulty of the example tasks.

Essential Skills profiles can be found on the Employment and Social Development Canada (ESDC) website at <a href="https://www.esdc.gc.ca/eng/jobs/les/profiles/index.shtml">www.esdc.gc.ca/eng/jobs/les/profiles/index.shtml</a>

The development and improvement of these Essential Skills is inherent throughout the apprenticeship training program as apprentices work towards achieving journeyperson status.

## SSI-100 Safety

#### **Learning Outcomes:**

- Demonstrate knowledge of safe work practices.
- Demonstrate knowledge of regulatory requirements pertaining to safety.
- Demonstrate knowledge of personal protective equipment (PPE) and safety equipment, their applications, maintenance and procedures for use.
- Demonstrate knowledge of regulatory requirements pertaining to safety.
- Demonstrate knowledge of applications and procedures for locking out/tagging out equipment.
- Demonstrate knowledge of applications and procedures for working in confined spaces.

#### 2017 Red Seal Occupational Standard Reference:

- 1.01 Maintains safe work environment.
- 1.02 Uses personal protective equipment (PPE) and safety equipment.
- 1.03 Performs lock-out and tag-out procedures.
- 1.04 Performs work in confined space.

#### **Suggested Hours:**

9 Hours

#### **Objectives and Content:**

- 1. Define terminology associated with safe work practices, personal protective (PPE) and safety equipment, lock-out, tag-out and confined space procedures.
- 2. Identify and interpret workplace health and safety documentation and associated regulations.
  - i) safety-related documentation
    - field risk assessment
    - job hazard assessment
    - accident reports
    - equipment and PPE inspections

- tool box talk
- safety meeting minutes
- Workplace Hazardous Material Information System (WHMIS)/Globally Harmonized System (GHS) documents
- ii) federal regulations
  - WHMIS/GHS
  - Transportation of Dangerous Goods
- iii) provincial/territorial regulations
  - Occupational Health and Safety
- iv) municipal regulations
- v) confined space documentation
  - location
  - work description
  - hazard control
  - atmosphere testing
  - rescue plan
- 3. Identify workplace hazards, and describe safe work practices.
  - i) workplace hazards.
    - personal (confined space, working at heights, lifting and ergonomics, trenches).
    - workplace (hot work, lock-out/tag-out, high voltage, rotating equipment, barricades and flagging, radiation, extreme temperatures, noise).
    - environmental (hazardous materials, quality of air, system drainage and disposal requirements).
  - ii) safe work practices.
    - fall protection
    - hot work
    - confined space
    - travel restraint
    - using personal protective equipment (PPE)
    - following site-specific requirements
- 4. Identify types of PPE, and describe their applications and procedures for use.
  - i) Basic PPE
    - hard hats
    - safety glasses
    - hearing protection
    - safety boots.

- high-visibility vests
- ii) specialized
  - site-specific PPE
  - fall protection
  - travel restraints
- 5. Identify types and location of site safety equipment, and describe their applications and procedures for use.
  - i) fire extinguishers
  - ii) eye wash stations
  - iii) first aid kits
  - iv) spill kits
  - v) air monitoring devices
- 6. Identify lock-out and tag-out equipment, and describe their applications and procedures for use.
  - i) lock-out and tag-out equipment
    - lock and key
    - chains and tags
    - lock-out scissor clamp
    - lock-box
    - blanks
- 7. Identify safety procedures and hazards associated with confined spaces.
  - i) confined spaces
    - manholes
    - crawl spaces
    - trenches
    - tanks
    - service chases
    - elevator shafts
    - attics
    - vaults
  - ii) confined space hazards
    - air quality
    - lack of accessibility
    - location
    - hazards of the contents
- 8. Identify situations that require specialty safety equipment.

- i) confined space
- ii) fall protection
- iii) hot work
- iv) site specific
- 9. Describe the procedures used to inspect, maintain and store PPE and safety equipment.
  - i) inspect and identify outdated or damaged PPE
    - expired hard hats
    - excessively worn boots
    - cracked safety glasses
- 10. Describe procedures for locking out/tagging out equipment and piping.
  - i) determine lock-out and tag-out requirements for system components
  - ii) obtain and install lock-out and tag-out equipment
  - iii) remove designated lock-out and tag-out equipment
- 11. Describe procedures associated with confined spaces.
  - i) confirm if area has been classified as a confined space
  - ii) determine if confined space is safe for entry
  - iii) determine hazards within confined space

## SSI-105 Tools and Equipment

#### **Learning Outcomes:**

- Demonstrate knowledge of hand tools, their applications, maintenance and procedures for use.
- Demonstrate knowledge of portable and stationary power tools, their applications, maintenance and procedures for use.
- Demonstrate knowledge of measuring and testing equipment, their applications, maintenance and procedures for use.

#### 2017 Red Seal Occupational Standard Reference:

- 2.01 Uses hand tools.
- 2.02 Uses portable and stationary power tools.
- 2.03 Uses measuring and testing equipment.

#### **Suggested Hours:**

9 Hours

#### **Objectives and Content:**

- 1. Define terminology associated with tools and equipment.
- 2. Identify hazards and describe safe work practices pertaining to the use of tools, and equipment.
  - i) dull saws and cutting blades
  - ii) worn jaws on pipe wrenches
  - iii) chipped cutting wheels
  - iv) fractured, cracked or corroded equipment
  - v) missing parts
  - vi) defective or missing guards
  - vii) frayed cords
  - viii) defective blades

- 3. Identify types of tools and equipment, and describe their applications and procedures for use.
  - i) hand tools
  - ii) portable and stationary power tools
  - iii) measuring and testing equipment

# Practical Objectives

N/A

## SSI-110 Access Equipment

#### **Learning Outcomes:**

 Demonstrate knowledge of the selection, assembly and procedures for using access equipment.

#### 2017 Red Seal Occupational Standard Reference:

2.04 Uses access equipment.

#### **Suggested Hours:**

4 Hours

#### **Objectives and Content:**

- 1. Define terminology associated with access equipment.
- 2. Identify hazards and describe safe work practices pertaining to the use of access equipment.
- 3. Interpret codes and regulations pertaining to the use of access equipment.
  - i) jurisdictional limitations
  - ii) certification requirements
  - iii) Canadian Standards Association (CSA)
  - iv) American National Standards Institute (ANSI) standards
- 4. Identify types of access equipment, and describe their applications.
- 5. Describe the procedures used to inspect and maintain ladders and scaffolding.
- 6. Describe the procedures used to erect, level and dismantle scaffolding.
- 7. Describe the procedures used to store and secure access equipment.
- 8. Describe the procedures to inspect and operate power elevated work platforms.

# <u>Practical Objectives</u>

N/A

## SSI-115 Rigging, Hoisting and Lifting

#### **Learning Outcomes:**

- Demonstrate knowledge of rigging, hoisting and lifting equipment, their applications, limitations and procedures for use.
- Demonstrate knowledge of calculations required to perform rigging, hoisting and lifting operations.
- Demonstrate knowledge of knots, bends and hitches, their applications and procedures for tying.
- Demonstrate knowledge of communication methods used for hoisting and lifting.
- Demonstrate knowledge of the procedures used to plan and perform rigging, hoisting and lifting operations.

#### 2017 Red Seal Occupational Standard Reference:

2.05 Uses rigging, hoisting and lifting equipment.

#### **Suggested Hours:**

4 Hours

#### **Objectives and Content:**

- 1. Define terminology associated with rigging, hoisting and lifting equipment.
- 2. Identify hazards and describe safe work practices pertaining to rigging, hoisting and lifting equipment.
  - i) hazards
    - overhead obstructions
    - excavations
    - excessive loads
- 3. Identify documentation and regulations pertaining to rigging, hosting and lifting equipment.

- 4. Identify types of rigging, hoisting and lifting equipment, and describe their applications, limitations and procedures for use.
- 5. Identify types of ropes and slings, and describe their characteristics, safe working loads and applications.
  - i) nylon
  - ii) manila
  - iii) graded
  - iv) wire sling
- 6. Identify the factors to consider for selecting rigging equipment.
  - i) load characteristics
  - ii) environment
  - iii) safety factors
- 7. Identify types of knots, bends and hitches used on ropes, and describe their applications and procedures to tie them.
  - i) bowline
  - ii) sheet bend
  - iii) clove hitch
- 8. Identify and interpret hand signals used for hoisting and lifting.
- 9. Describe sling angle when preparing for hoisting and lifting operations.
- 10. Describe the procedures used to inspect, maintain and store hoisting, lifting and rigging equipment.
- 11. Describe the procedures used for attaching rigging equipment to the load.
- 12. Describe the factors to consider, and the procedures used to perform calculations related to rigging, hoisting and lifting operations.
- 13. Describe the communication methods used during hoisting, lifting and rigging operations.
  - i) hand signals
  - ii) electronic communications
  - iii) audible/visual

- 14. Describe the procedures used to ensure the work area is safe for lifting.
  - i) supervision of lift
  - ii) securing work area
  - iii) communication
- 15. Describe the procedures used to plan and perform a lift.
  - i) determine weight of the load
  - ii) select equipment
  - iii) determine set-up of equipment
  - iv) determine communication methods
  - v) set up hoisting/lifting equipment
  - vi) rig material/equipment to be lifted
  - vii) attach tag line
  - viii) perform pre-lift checks
  - ix) lift and place load
  - x) perform post-lift inspection of the load
  - xi) disconnect the load
- 16. Describe the procedures to apply mathematical concepts to rigging, hoisting and lifting procedures
  - i) weight conversions
  - ii) safe working load
  - iii) geometry
  - iv) sling angles

## Practical Objectives

- 1. Perform hand signals.
- 2. Perform tying of knots, bends and hitches.

# SSI-120 Drawings I

#### **Learning Outcomes:**

- Demonstrate knowledge of sprinkler system drawings and on-site drawings.
- Demonstrate knowledge of the procedures to read and interpret drawings and on-site drawings.

#### 2017 Red Seal Occupational Standard Reference:

3.02 Uses drawings and specifications.

#### **Suggested Hours:**

13 Hours

#### **Objectives and Content:**

- 1. Define terminology associated with reading and sketching drawings.
- 2. Explain the fundamentals of orthographic and isometric projections.
- 3. Identify types of lines found on sprinkler system drawings.
  - i) object (visible)
  - ii) hidden
  - iii) center
  - iv) dimension
  - v) extension
  - vi) section cutting
  - vii) material section
- 4. Identify symbols found on sprinkler system drawings.
- 5. Identify types of views found on sprinkler system drawings.
  - i) plan
  - ii) elevation
  - ii) sections

- iv) details
- 6. Identify types of scales and describe their characteristics and applications.
  - i) metric scale (S.I.)
  - ii) architect scale (imperial)
  - iii) engineer scales
- 7. Identify divisions of drawings and describe their purpose.
  - i) architectural
  - ii) structural
  - iii) mechanical
  - iv) electrical
  - v) plot
  - vi) specifications
  - vii) schedules

## **Practical Objectives**

1. Perform scaling of drawings in both imperial and metric.

#### SSI-125 Trade Related Documents

#### **Learning Outcomes:**

- Demonstrate knowledge of trade related codes, standards, regulations, procedures and their applications.
- Demonstrate knowledge of trade related documentation and reference material and their application.

# 2017 Red Seal Occupational Standard Reference:

- 3.03 Uses documentation and reference material.
- 3.01 Interprets codes, standards, regulations and procedures.

#### **Suggested Hours:**

4 Hours

#### **Objectives and Content:**

#### Theoretical Objectives

- 1. Define terminology associated with trade-related documentation, codes, standards, regulations, and reference material.
- 2. Identify types of trade-related documentation, codes, standards, regulations, reference material, and describe their applications.
- 3. Explain responsibilities associated with completing and/or signing trade related documents.
- 4. Describe the procedures used to complete trade related documents.

#### **Practical Objectives**

N/A

## SSI-130 Communication Techniques

#### **Learning Outcomes:**

- Demonstrate knowledge of trade terminology.
- Demonstrate knowledge of effective communication practices.
- Demonstrate knowledge of strategies for learning skills in the workplace.

#### 2017 Red Seal Occupational Standard Reference:

- 5.01 Uses communication techniques.
- 5.02 Uses mentoring techniques (from the perspective of the apprentice).

#### **Suggested Hours:**

4 Hours

#### **Objectives and Content:**

- 1. Define terminology used in the trade.
- 2. Describe the importance of using effective verbal and non-verbal communication with people in the workplace.
  - i) other tradespeople
  - ii) colleagues
  - iii) apprentices
  - iv) supervisors
  - v) clients
  - vi) authority having jurisdiction
  - vii) manufacturers
- 3. Identify sources of information to effectively communicate.
- 4. Identify communication and learning styles.
  - i) learning styles
    - audible
    - visual

- experiential
- theoretical
- any combination of the above
- 5. Describe effective listening and speaking skills.
  - i) hearing
  - ii) interpreting
  - iii) reflecting
  - iv) responding
  - v) paraphrasing
- 6. Identify personal responsibilities and attitudes that contribute to on-the-job success.
  - i) asking questions
  - ii) working safely
  - iii) accepting constructive feedback
  - iv) time management and punctuality
  - v) respect for authority
  - vi) good stewardship of materials, tools and property
  - vii) efficient work practices
- 7. Identify the value of diversity in the workplace.
- 8. Identify communication that constitutes harassment and discrimination.
  - i) harassment
    - objectionable conduct
    - comment or display made either on a one-time or continuous basis that demeans, belittles, or causes personal humiliation or embarrassment to the recipient
  - ii) discrimination
    - an opinion or negative action of someone based on race, national or ethnic origin, colour, religion, age, sex, sexual orientation, marital status, family status, disability or conviction for which a pardon has been granted
- 9. Describe the learner's role in workplace learning.
- 10. Determine one's own learning preferences and explain how these relate to learning new skills.

- 11. Describe the importance of different types of skills in the workplace.
- 12. Describe the importance of essential skills in the workplace.
  - i) reading
  - ii) document use
  - iii) writing
  - iv) oral communication
  - v) numeracy
  - vi) thinking
  - vii) working with others
  - viii) digital technology
  - ix) continuous learning
- 13. Identify different ways of learning.

# SSI-135 Steel Pipe and Fittings

#### **Learning Outcomes:**

- Demonstrate knowledge of steel pipe, tube and fittings.
- Demonstrate knowledge of the procedures used to install steel pipe, tube and fittings.

### 2017 Red Seal Occupational Standard Reference:

11.01 Installs steel pipe, tube and fittings.

#### **Suggested Hours:**

17 Hours

#### **Objectives and Content:**

- 1. Define terminology associated with steel pipe, tube and fittings.
- 2. Identify hazards and describe safe work practices related to installing steel pipe, tube and fittings.
- 3. Identify codes, standards and regulations pertaining to steel pipe, tube and fittings.
- 4. Identify information pertaining to steel pipe and tube installation found on drawings and specifications.
- 5. Identify types of steel pipe and tube.
  - i) stainless
  - ii) galvanized
  - iii) carbon
- 6. Identify tools and equipment for installing steel pipe, tube and fittings, and describe their applications and procedures for use.
  - i) wrenches

- ii) levels
- iii) sockets
- iv) chain vices
- 7. Identify friction loss as it applies to steel pipe schedules and hydraulically calculated systems.
- 8. Identify the design considerations for installing steel pipe, tube and fittings.
- 9. Describe the procedures used to install steel pipe, tube and fittings.
- 10. Describe connection types related to steel pipe and tube.
- 11. Describe the procedures to apply mathematical concepts to steel pipe, tube and fittings.
  - i) converting decimal feet in a linear measurement
  - ii) metric and imperial conversions
  - iii) geometry
  - iv) fitting allowances
  - v) bending allowances
  - vi) Pythagorean theorem
  - vii) pipe layout

1. Perform cutting, threading and grooving of steel pipe.

# SSI-140 Plastic Pipe and Fittings

#### **Learning Outcomes:**

- Demonstrate knowledge of plastic pipe, tube and fittings.
- Demonstrate knowledge of the procedures used to install plastic pipe, tube and fittings.

### 2017 Red Seal Occupational Standard Reference:

11.02 Installs plastic pipe, tube and fittings.

#### **Suggested Hours:**

17 Hours

# **Objectives and Content:**

- 1. Define terminology associated with plastic pipe, tube and fittings.
- 2. Identify hazards and describe safe work practices related to installing plastic pipe, tube and fittings.
- 3. Identify codes, standards and regulations pertaining to plastic pipe, tube and fittings.
- 4. Identify information pertaining to plastic pipe and tube installation found on drawings and specifications.
- Identify tools and equipment for installing plastic pipe and tube and, describe their applications and procedures for use.
- 6. Identify types of plastic pipe.
  - i) chlorinated polyvinyl chloride (CPVC)
  - ii) cross-linked polyethylene (PEX)
  - iii) polyvinyl chloride (PVC)

- 7. Identify friction loss as it applies to plastic pipe and tube and hydraulically calculated systems.
- 8. Describe the procedures used to install plastic pipe, tube and fittings.
- 9. Describe connection types related to plastic pipe and tube.
- 10. Identify compatibility of plastic pipe and tube with site conditions and other materials.
  - i) adhere to manufactures specifications and material safety data sheets (MSDS)
- 11. Identify the design considerations for installing plastic pipe, tube and fittings.
- 12. Describe the procedures to apply mathematical concepts to plastic pipe, tube and fittings.
  - i) converting decimal feet in a linear measurement
  - ii) metric and imperial conversions
  - iii) geometry
  - iv) fitting allowances
  - v) Pythagorean theorem
  - vi) pipe layout

1. Perform prep, cut and assemble of plastic pipe.

# SSI-145 Copper Pipe and Tubing

#### **Learning Outcomes:**

- Demonstrate knowledge of copper pipe, tubing and fittings.
- Demonstrate knowledge of the procedures used to install copper pipe, tubing and fittings.

#### 2017 Red Seal Occupational Standard Reference:

11.03 Installs copper pipe, tube and fittings.

### **Suggested Hours:**

9 Hours

#### **Objectives and Content:**

- 1. Define terminology associated with copper pipe, tubing and fittings.
- 2. Identify hazards and describe safe work practices related to installing copper pipe, tubing and fittings.
- 3. Identify codes, standards and regulations pertaining to copper pipe, tubing and fittings.
- 4. Identify information pertaining to copper pipe and tubing installation found on drawings and specifications.
- 5. Identify types of copper pipe and tubing and describe their applications.
- 6. Identify tools and equipment for installing copper pipe, tubing and fittings and describe their applications and procedures for use.
- 7. Describe the procedures used to install copper pipe, tubing and fittings.
- 8. Describe connection types related to copper pipe.

- i) soldering
- ii) brazing
- iii) using grooved couplings
- iv) compression type fittings
- 9. Explain the effect of electrolysis on piping and tubing materials.
- 10. Identify friction loss as it applies to copper pipe and tubing, and hydraulically calculated systems.
- 11. Identify the design considerations for installing copper pipe, tubing and fittings.
- 12. Describe the procedures used to prepare and assemble flare and compression joints using hand tools.
- 13. Describe the procedures to apply mathematical concepts to copper pipe, tubing and fittings.
  - i) converting decimal feet in a linear measurement
  - ii) metric and imperial conversions
  - iii) geometry
  - iv) fitting allowances
  - v) bending allowances
  - vi) Pythagorean theorem
  - vii) pipe layout

1. Perform prep, cut, bend and assemble copper pipe, tubing and fittings.

# SSI-150 Sprinkler Heads and Nozzles

#### **Learning Outcomes:**

- Demonstrate knowledge of sprinklers and nozzles and their selection.
- Demonstrate knowledge of the procedures used to install sprinklers and nozzles.

#### 2017 Red Seal Occupational Standard Reference:

12.01 Selects sprinklers.

12.02 Installs sprinklers and nozzles.

#### **Suggested Hours:**

40 Hours

#### **Objectives and Content:**

- 1. Define terminology associated with sprinklers and nozzles.
- 2. Identify hazards and describe safe work practices pertaining to sprinklers and nozzles.
- 3. Identify codes, standards and regulations pertaining to sprinklers and nozzles.
- 4. Identify information pertaining to sprinklers and nozzles found on drawings, specifications and listings.
- 5. Identify tools and equipment relating to sprinklers and nozzles, and describe their applications and procedures for use.
- 6. Explain the operation of sprinklers and nozzles in systems.
- 7. Identify types of sprinklers and nozzles, and describe their characteristics and applications.
  - i) automatic sprinklers
    - solder

- bulb
- open
- ii) standard spray sprinklers
  - upright
  - pendant
  - sidewall
- iii) extended coverage sprinklers
  - pendant
  - upright
  - sidewall
- iv) specialty sprinklers and nozzles
  - residential
  - institutional
  - CMSA/large drop
  - ESFR, in-rack
  - attic
  - old-style/conventional
  - open sprinkler
  - window
  - dry
  - foam
  - CO<sup>2</sup>
  - clean agent
  - combustible concealed space
- v) flexible sprinkler assemblies
- 8. Identify conditions, hazard classification and commodity classification for selecting sprinklers.
  - i) conditions
    - freezing
    - excessive heat
    - corrosive environment
  - ii) commodity classification
    - high pile storage
    - in-rack
    - solid pile
- 9. Explain the importance of correct positioning for sprinklers and nozzles.

- 10. Identify required distances between standard spray and extended coverage sprinklers based on occupancy classification, manufacturers' specifications and National Fire Protection Association (NFPA) standards.
  - i) occupancy classifications
    - light hazard
    - ordinary hazard
    - extra hazard
- 11. Identify obstructions of sprinklers and nozzles.
- 12. Identify clearances required between piled storage materials and sprinkler deflectors.
- 13. Identify the factors that affect maximum ceiling temperature.
- 14. Identify temperature ratings and colour coding.
  - i) ordinary
  - ii) intermediate
  - iii) high
  - iv) extra-high
- 15. Identify performance characteristics that apply to automatic sprinklers.
  - i) deflector design/spray patterns
  - ii) orifice size
  - iii) temperature rating
  - iv) temperature sensitivity
  - v) orientation
- 16. Describe the procedures used to install sprinklers and nozzles.
- 17. Describe the procedures used and the factors to consider to protect, handle and care for sprinklers and nozzles prior to and during the installation process.

# SSI-155 Supports and Hangers

#### **Learning Outcomes:**

- Demonstrate knowledge of supports and hangers, their characteristics and applications.
- Demonstrate knowledge of the procedures used to install supports and hangers.

#### 2017 Red Seal Occupational Standard Reference:

12.04 Installs supports and hangers.

#### **Suggested Hours:**

17 Hours

#### **Objectives and Content:**

- 1. Define terminology associated with supports and hangers.
- 2. Identify hazards and describe safe work practices pertaining to supports and hangers.
- 3. Identify codes, standards and regulations pertaining to supports and hangers.
- 4. Identify information pertaining to supports and hangers found on drawings and specifications.
- 5. Identify the factors to consider to perform grade and hanger location calculations.
  - i) grade on pipe
  - ii) slope of ceiling
  - iii) hanger spacing
  - iv) distance from hanger to attachment points
  - v) surge restraints

- 6. Identify tools and equipment relating to supports and hangers, and describe their applications and procedures for use.
  - i) hammer drills
  - ii) adjustable wrenches
  - iii) hacksaws
  - iv) pliers
- 7. Identify types of supports and hangers used in the installation of pipe, tube and tubing, and describe their characteristics and applications.
  - i) supports
    - ceiling flanges
    - side beam attachments
    - c-clamps
  - ii) hangers
    - riser clamps
    - pipe clamps
    - swivel rings
    - clevis
    - split rings
- 8. Identify types and sizes of hanger rods, and describe their characteristics and applications.
- 9. Identify types of protective materials applied to hangers, and describe their purpose and applications.
- 10. Identify types of fasteners and inserts, and describe their characteristics and applications.
- 11. Describe the procedures used to install supports and hangers.
- 12. Describe the procedures used to install fasteners into structure material.
- 13. Describe the procedures to apply mathematical concepts to hangers, supports and bracing
  - i) converting decimal feet in a linear measurement
  - ii) metric and imperial conversions
  - iii) geometry
  - iv) Pythagorean theorem
  - v) pipe layout

# vi) trapeze

# <u>Practical Objectives</u>

# SSI-160 Pipe Design and Installation I

#### **Learning Outcomes:**

- Demonstrate knowledge of the procedures to plan and organize jobs.
- Demonstrate knowledge of procedures to receive materials.
- Demonstrate knowledge of procedures used to plan for and prepare work sites.
- Demonstrate knowledge of procedures used to store, secure, organize and maintain materials.
- Demonstrate knowledge of sprinkler system layout.
- Demonstrate knowledge of the tools, materials and procedures used to prepare pipe fittings.
- Demonstrate knowledge of the tools, equipment, materials used to cut, grind, groove, thread, bend, paint and label pipe and tube.
- Demonstrate knowledge of the procedures to cut, grind, groove, thread, bend, paint and label pipe and tube.
- Demonstrate knowledge of pipe sleeves and their installation.

#### 2017 Red Seal Occupational Standard Reference:

- 3.04 Plans job tasks and procedures.
- 3.05 Prepares work site.
- 3.06 Performs layout of systems.
- 10.01 Cuts pipe and tube.
- 10.02 Bends pipe and tube.
- 10.03 Threads pipe.
- 10.04 Grooves pipe.
- 10.05 Drills pipe and tube.
- 10.06 Grinds pipe.
- 10.07 Prepares fittings.
- 11.04 Paints and labels pipe and tube.
- 12.03 Installs sleeves.

### **Suggested Hours:**

17 Hours

### **Objectives and Content:**

- 1. Define terminology associated with pipe design and installation.
  - i) cutting pipe and tube
  - ii) grinding pipe
  - iii) grooving pipe
  - iv) threading pipe
  - v) drilling pipe and tube
  - vi) bending pipe and tube
  - vii) pipe fittings
  - viii) sleeves
  - ix) painting and labeling pipe and tube
  - x) job planning activities
  - xi sprinkler system layout
- 2. Identify hazards and describe safe work practices pertaining pipe design and installation.
- 3. Identify codes, standards and regulations pertaining to pipe design and installation.
- 4. Identify tools and equipment relating to pipe design and installation, and describe their applications and procedures for use.
- 5. Identify information pertaining to pipe design and installation found on drawings and specifications.
- 6. Identify the factors to consider for determining pipe design and installation requirements.
- 7. Describe the procedures used to cut pipe and tube to required dimensions.
- 8. Describe the procedures used to grind pipe.
- 9. Describe the procedures used to groove pipe.
- 10. Describe the procedures used to thread pipe.
- 11. Describe the procedures used to drilling pipe and tube.

- 12. Describe the procedures used to bend pipe and tube to required dimensions.
- 13. Describe the procedures used to prepare pipe fittings.
- 14. Describe the procedures used to size and install pipe sleeves.
- 15. Describe the procedures and materials used to paint and label pipe and tube.
- 16. Describe the procedures used to plan job tasks.
- 17. Describe the procedures used to lay out sprinkler systems and components.
- 18. Describe the procedures used to prepare work sites.
- 19. Describe the procedures used to and verify delivered materials.
- 20. Describe the procedures used to receive, store, secure, organize materials and maintain inventory.
- 21. Describe the procedures to apply mathematical concepts to pipe design and installation.
  - i) converting decimal feet in a linear measurement
  - ii) metric and imperial conversions
  - iii) geometry
  - iv) fitting allowances
  - v) bending allowances
  - vi) Pythagorean theorem
  - vii) pipe layout

1. Perform pipe installation and assembly.

# SSI-165 Soldering, Brazing and Oxy-Acetylene Cutting

## **Learning Outcomes:**

- Demonstrate knowledge of soldering and brazing equipment, applications and procedures.
- Demonstrate knowledge of the procedures used to grind pipe.
- Demonstrate knowledge of the procedures used to braze and solder joints.

# 2017 Red Seal Occupational Standard Reference:

- 2.06 Uses soldering and brazing equipment.
- 10.06 Grinds pipe.
- 11.03 Installs copper pipe, tube and fittings.

#### **Suggested Hours:**

9 Hours

### **Objectives and Content:**

- 1. Define terminology associated with soldering, brazing and oxy-acetylene cutting.
- 2. Identify hazards and describe safe work practices pertaining to soldering, brazing and oxy-acetylene cutting.
- 3. Identify codes, standards and regulations pertaining to soldering, brazing and oxy-acetylene cutting.
- 4. Interpret information pertaining to soldering, brazing and oxy-acetylene cutting found on drawings and specifications.
- 5. Identify types of soldering, brazing and oxy-acetylene equipment and consumables.
  - i) oxy-fuel and air-fuel torches
  - ii) gas cylinders
  - iii) torch heads and tips

- iv) brazing alloy and flux
- v) soldering alloy and flux
- vi) sand cloth
- vii) gases (oxygen, acetylene, MAPP, propane, butane)
- 6. Identify different soldering and brazing processes and applications.
- 7. Describe the procedures to use oxy-acetylene equipment.
- 8. Describe the procedures used to solder and braze joints.
- 9. Describe the procedures used to inspect, maintain and store soldering, brazing and oxy-acetylene equipment.

1. Perform soldering and brazing on various types of pipe

# SSI-170 Wet Pipe Sprinkler Systems

## **Learning Outcomes:**

- Demonstrate knowledge of wet pipe systems, and their operation and characteristics.
- Demonstrate knowledge of the procedures used to install wet pipe systems and components.

#### 2017 Red Seal Occupational Standard Reference:

13.01 Installs wet pipe systems.

#### **Suggested Hours:**

17 Hours

### **Objectives and Content:**

- 1. Define terminology associated with wet pipe systems.
- 2. Identify hazards and describe safe work practices pertaining to wet pipe systems.
- 3. Identify codes, standards and regulations pertaining to wet pipe systems.
- 4. Identify information pertaining to wet pipe systems found on drawings and specifications.
- 5. Identify tools and equipment relating to wet pipe systems, and describe their applications and procedures for use.
- 6. Identify types of wet pipe systems, and describe their operating principles and characteristics.
  - i) tree
  - ii) gridded
  - iii) looped

- 7. Identify wet pipe system components, and describe their location, purpose and operation.
  - i) fire department connection
  - ii) test connections and drains
  - iii) sprinklers, alarm devices
  - iv) control valves
  - v) alarm check valves
  - vi) water flow alarm devices
  - vii) relief valves
  - viii) valves
  - ix) flow switches
  - x) riser manifolds
  - xi) air vents
- 8. Identify alarm valves to be trimmed, and describe their components and relevant design characteristics.
- 9. Determine characteristics and application of sprinklers.
- 10. Identify design criteria for wet pipe systems.
  - i) density
  - ii) square footage
  - iii) occupancy classifications
- 11. Identify drainage requirements for each water-based system.
- 12. Describe the procedures used to layout and install wet pipe systems and their components.
- 13. Describe the procedures used to install alarm valve trim.
- 14. Identify the factors to consider and requirements for installing auxiliary drains on wet pipe systems.
- 15. Describe the preventative methods used to prevent false alarms.
- 16. Identify the requirements for pressure testing of wet pipe systems and describe the associated procedures.
- 17. Describe methods used to prevent freezing.

- 18. Describe the procedures to apply mathematical concepts to wet pipe sprinkler systems.
  - i) converting decimal feet in the a linear measurement
  - ii) metric and imperial conversions
  - iii) geometry
  - iv) Pythagorean theorem
  - v) pipe layout

# SSI-175 Dry Pipe Sprinkler Systems

## **Learning Outcomes:**

- Demonstrate knowledge of dry pipe systems, their operation and characteristics.
- Demonstrate knowledge of the procedures used to install dry pipe systems and their components.

#### 2017 Red Seal Occupational Standard Reference:

13.02 Installs dry pipe systems.

#### **Suggested Hours:**

20 Hours

# **Objectives and Content:**

- 1. Define terminology associated with dry pipe systems.
- 2. Identify hazards and describe safe work practices pertaining to dry pipe systems.
- 3. Identify codes, standards and regulations pertaining to dry pipe systems.
- 4. Identify information pertaining to dry pipe systems found on drawings and specifications.
- 5. Identify tools and equipment relating to dry pipe systems, and describe their applications and procedures for use.
- 6. Identify types of dry pipe systems, and describe their operating principles and characteristics.
  - i) tree
  - ii) looped
- 7. Identify dry pipe system components, and describe their locations, purpose and operation.

- i) fire department connections
- ii) test connections and drains
- iii) water flow alarm devices
- iv) control valves
- v) dry pipe valves
- vi) regulated air supply
- vii) regulated nitrogen supply
- viii) valves
- ix) qods
- x) anti-flooding devices
- xi) auxiliary drains
- xii) drum drips
- xiii) high/low supervisory devices
- xiv) pressure gauges
- 8. Identify dry pipe valves to be trimmed, and describe their components and design characteristics.
- 9. Identify the factors to consider and requirements for installing auxiliary drains on dry pipe systems.
- 10. Identify the requirements for pressure testing of dry pipe systems, and describe the associated procedures.
- 11. Describe the procedures used to layout and install dry pipe systems and components.
  - i) grade pipe mains and branch lines
  - ii) low point drains
- 12. Describe the procedures used to install dry pipe valve trim.
- 13. Describe the preventative methods used to prevent false alarms.
  - i) air and nitrogen supply
  - ii) air dryer
  - iii) air maintenance device
- 14. Identify calculations pertaining to capacity of dry pipe systems and air or nitrogen supply.

- 15. Describe the procedures to apply mathematical concepts to dry pipe sprinkler systems.
  - i) converting decimal feet in a linear measurement
  - ii) metric and imperial conversions
  - iii) geometry
  - iv) Pythagorean theorem
  - v) pipe layout

1. Reset a dry pipe valve (DPV).

# SSI-180 Antifreeze Sprinkler Systems

## **Learning Outcomes:**

- Demonstrate knowledge of antifreeze systems, their operation and characteristics.
- Demonstrate knowledge of the procedures to install and maintain antifreeze systems.

#### 2017 Red Seal Occupational Standard Reference:

13.03 Installs antifreeze systems.

#### **Suggested Hours:**

4 Hours

### **Objectives and Content:**

- 1. Define terminology associated with antifreeze systems.
- 2. Identify hazards and describe safe work practices pertaining to antifreeze systems.
- 3. Identify codes, standards and regulations pertaining to antifreeze systems.
- 4. Identify information pertaining to antifreeze systems found on drawings and specifications.
- 5. Identify tools and equipment relating to antifreeze systems, and describe their applications and procedures for use.
- 6. Identify the factors to consider for determining the need for freezing protection or antifreeze systems.
  - i) location
  - ii) accessibility
  - iii) cost

- 7. Identify types of antifreeze systems and their components, and describe their purpose and applications.
  - i) configuration
  - ii) types of solutions
  - iii) temperature mixtures
- 8. Identify types and mixtures of antifreeze solutions, and describe their characteristics and applications.
  - i) used with potable water supply
  - ii) used with non-potable water supply
- 9. Identify the requirements and describe the procedures used to handle, store and dispose of antifreeze.
- 10. Identify valves required for antifreeze systems.
- 11. Identify installation requirements for antifreeze systems.
  - i) antifreeze loop
  - ii) cross-connection control
- 12. Describe the procedures used to test and maintain antifreeze systems.
- 13. Identify the requirements for pressure testing of antifreeze systems, and describe the associated procedures.

# SSI-185 Pre-Action Systems I

## **Learning Outcomes:**

 Demonstrate knowledge of pre-action systems, their applications and operating principles.

#### 2017 Red Seal Occupational Standard Reference:

13.04 Installs pre-action systems.

## **Suggested Hours:**

9 Hours

#### **Objectives and Content:**

- 1. Define terminology associated with pre-action systems.
- 2. Identify hazards and describe safe work practices pertaining to pre-action systems.
- 3. Identify codes, standards and regulations pertaining to pre-action systems.
- 4. Identify information pertaining to pre-action systems found on drawings and specifications.
- 5. Identify tools and equipment relating to pre-action systems, and describe their applications and procedures for use.
- 6. Identify types of pre-action systems and describe their operating principles and applications.
  - i) pre-action systems
    - non-interlock
    - single interlock
    - double interlock
  - ii) applications

- computer rooms
- freezers
- aircraft hangers
- electrical rooms
- 7. Identify trim components used on pre-action valves, and describe their design variations and applications.
- 8. Identify types of alarms that a pre-action valve will operate.
  - i) solenoid actuators
  - ii) diaphragm actuators
- 9. Identify supplemental fire detection systems, and describe their operating principles and applications.
  - i) electric
  - ii) pneumatic
  - iii) hydraulic
- 10. Identify the system controls required for pre-action systems.

# SSI-190 Deluge Systems I

## **Learning Outcomes:**

Demonstrate knowledge of deluge systems, their applications and operating principles.

#### 2017 Red Seal Occupational Standard Reference:

13.04 Installs deluge systems.

### **Suggested Hours:**

9 Hours

### **Objectives and Content:**

- 1. Define terminology associated with deluge systems.
- 2. Identify hazards and describe safe work practices pertaining to deluge systems.
- 3. Identify codes, standards and regulations pertaining to deluge systems.
- 4. Identify information pertaining to deluge systems found on drawings and specifications.
- 5. Identify tools and equipment relating to deluge systems, and describe their applications and procedures for use.
- 6. Identify types of deluge systems, and describe their operating principles and applications.
  - i) deluge systems
    - deluge
    - high speed deluge
  - ii) applications
    - aircraft hangers
    - petro-chemical

- mining
- pulp and paper
- theatrical stages
- marine
- wharfs
- transformers
- 7. Identify trim components used on deluge valves, and describe their design variations and applications.
- 8. Identify types of alarms that a deluge valve will operate.
  - i) solenoid actuators
  - ii) diaphragm actuators
- 9. Identify supplemental fire detection systems, and describe their operating principles and applications.
  - i) electric
  - ii) pneumatic
  - iii) hydraulic
- 10. Identify the system controls required for deluge systems.

# <u>Practical Objectives</u>

# SSI-195 System Drainage I

## **Learning Outcomes:**

Demonstrate knowledge of system drainage.

#### 2017 Red Seal Occupational Standard Reference:

12.07 Installs system drainage.

#### **Suggested Hours:**

4 Hours

#### **Objectives and Content:**

- 1. Define terminology associated with system drainage.
- 2. Identify hazards and describe safe work practices pertaining to system drainage.
- 3. Identify tools and equipment relating to system drainage, and describe their applications and procedures for use.
- 4. Identify types of system drainage, and describe their operating principles and characteristics.
  - i) main
  - ii) auxiliary
  - iii) sectional
- 5. Identify grading requirements for system drainage.
- 6. Identify system drainage components and their applications.
  - i) drain valves
  - ii) drain cups
  - iii) air gaps
  - iv) drum drip

- 7. Describe the procedures to apply mathematical concepts to systems of drainage.
  - i) converting decimal feet in a linear measurement
  - ii) metric and imperial conversions
  - iii) geometry
  - iv) Pythagorean theorem
  - v) pipe layout

# SSI-600 Principles of Electricity

#### **Learning Outcomes:**

- Demonstrate knowledge of the basic concepts of electricity.

#### 2017 Red Seal Occupational Standard Reference:

N/A

# **Suggested Hours:**

4 Hours

### **Objectives and Content:**

- 1. Define terminology associated with electricity as related to the trade.
- 2. Identify hazards and describe safe work practices pertaining to electricity.
- 3. Identify electrical-related information found on drawings and specifications.
- 4. Identify tools and equipment used to test electrical circuits, and describe their applications and procedures for use.
- 5. Identify and explain Ohm's law.
- 6. Identify types of current and describe their characteristics and applications.
  - i) direct current (DC)
  - ii) alternating current (AC)
- 7. Identify types of electrical circuits and describe their characteristics, operation and applications.
  - i) series
  - ii) parallel
  - iii) series-parallel

1. Use a multimeter.

# Level 2

Code	Title	Hours	Page
SSI-200	Pipe Design and Installation II	24	72
SSI-205	Drawings II	23	74
SSI-210	System Drainage II	11	77
SSI-215	Commissioning Water Supply Systems I	13	79
SSI-220	Commissioning Fire Protection Systems I	13	81
SSI-225	Seismic Protection	14	83
SSI-230	Cross-Connection Control	9	85
SSI-235	Standpipe and Hose Systems	25	87
SSI-240	Water Supply, Hydrants and Fire Department Connections	24	90
SSI-245	Detection Devices	14	94
SSI-250	Signal-Initiating Devices	16	96
SSI-255	Pre-Action Systems II	28	98
SSI-260	Deluge Systems II	26	101

## SSI-200 Pipe Design and Installation II

#### **Learning Outcomes:**

- Demonstrate knowledge of the procedures to plan and organize jobs.
- Demonstrate knowledge of procedures to receive materials.
- Demonstrate knowledge of procedures used to plan for and prepare work sites.
- Demonstrate knowledge of procedures used to store, secure, organize and maintain materials.
- Demonstrate knowledge of sprinkler system layout.
- Demonstrate knowledge of the procedures to paint and label pipe and tube.
- Demonstrate knowledge of pipe sleeves and their installation.

#### 2017 Red Seal Occupational Standard Reference:

- 3.01 Interprets codes, standards, regulations and procedures.
- 3.03 Uses documentation and reference material.
- 3.04 Plans job tasks and procedures.
- 3.05 Prepares work site.
- 3.06 Performs layout of systems.
- 11.04 Paints and labels pipe and tube.
- 12.03 Installs sleeves.

## **Suggested Hours:**

24 Hours

#### **Objectives and Content:**

- 1. Define terminology associated with pipe design and installation.
  - i) sleeves
  - ii) painting and labeling pipe and tube
  - iii) job planning activities
  - iv) sprinkler system layout
- 2. Identify hazards and describe safe work practices pertaining to pipe design and installation.

- 3. Identify codes, standards and regulations pertaining to pipe design and installation.
- 4. Interpret information pertaining to pipe design and installation found on drawings and specifications.
- 5. Identify tools and equipment relating to pipe design and installation, and describe their applications and procedures for use.
- 6. Identify the factors to consider for determining pipe design and installation requirements.
- 7. Describe and apply mathematical concepts related to pipe design and installation.
- 8. Describe the procedures used to size and install pipe sleeves.
- 9. Describe the procedures and materials used to paint and label pipe and tube.
- 10. Describe the procedures used to plan job tasks.
- 11. Describe the procedures used to lay out sprinkler systems and components.
- 12. Describe the procedures used to prepare work sites.
- 13. Describe the procedures used to and verify delivered materials.
- 14. Describe the procedures used to receive, store, secure, organize materials and maintain inventory.

1. Calculate friction loss on sprinkler system types of pipe.

## SSI-205 Drawings II

#### **Learning Outcomes:**

- Demonstrate knowledge of sprinkler system drawings and on-site drawings.
- Demonstrate knowledge of the procedures to read and interpret drawings and on-site drawings.
- Demonstrate knowledge of the procedures to draw and label orthographic and isometric drawings.
- Demonstrate knowledge of the procedures to read and interpret information pertaining to sprinkler systems found in construction drawings.

#### 2017 Red Seal Occupational Standard Reference:

3.02 Uses drawings and specifications.

#### **Suggested Hours:**

23 Hours

## **Objectives and Content:**

- 1. Define terminology associated with reading and sketching drawings.
- 2. Explain the fundamentals of orthographic and isometric projections.
- 3. Identify types of lines found on sprinkler system drawings.
  - i) object (visible)
  - ii) hidden
  - iii) center
  - iv) dimension
  - v) extension
  - vi) section cutting
  - vii) material section
- 4. Identify symbols found on sprinkler system drawings.

- 5. Identify types of views found on sprinkler system drawings.
  - i) plan
  - ii) elevation
  - iii) sections
  - iv) details
- 6. Identify types of scales and describe their characteristics and applications.
  - i) metric scale (S.I.)
  - ii) architect scale (imperial)
  - iii) engineer scales
- 7. Identify drafting tools and drawing equipment, and describe their applications and procedures for use.
- 8. Identify divisions of drawings, and describe their purpose.
  - i) architectural
  - ii) structural
  - iii) mechanical
  - iv) electrical
  - v) plot
  - vi) specifications
  - vii) schedules
- 9. Identify views and drawings of a building, and describe their purpose.
- 10. Describe the procedures used to interpret sprinkler systems information found on drawings.
- 11. Describe the procedures used to interpret dimensions on drawings.
- 12. Describe the procedures used to interpret a site plan in both metric and imperial units.
- 13. Describe the procedures used to create orthographic and isometric drawings.
- 14. Describe the procedures used to interpret metric and imperial scaling.
- 15. Describe the procedures used to prepare orthographic and isometric sketches.

16. Describe the procedures used to prepare single line pipe drawings such as orthographic and isometric.

## **Practical Objectives**

- 1. Produce isometric drawings.
- 2. Scale drawings and sketches.
- 3. Perform take-offs.

## SSI-210 System Drainage II

## **Learning Outcomes:**

- Demonstrate knowledge of system drainage, and its operation and characteristics.
- Demonstrate knowledge of the procedures to install system drainage and components according to code requirements.

#### 2017 Red Seal Occupational Standard Reference:

- 3.01 Interprets codes, standards, regulations and procedures.
- 3.03 Uses documentation and reference material.
- 12.07 Installs system drainage.

#### **Suggested Hours:**

#### 11 Hours

#### **Objectives and Content:**

- 1. Define terminology associated with system drainage.
- 2. Identify hazards and describe safe work practices pertaining to system drainage.
- 3. Identify codes, standards and regulations pertaining to system drainage.
- 4. Interpret information pertaining to system drainage found on drawings and specifications.
- 5. Identify tools and equipment relating to system drainage, and describe its applications and procedures for use.
- 6. Identify types of system drainage, and describe its operating principles and characteristics.
  - i) main
  - ii) auxiliary

- iii) sectional
- 7. Identify system drainage components, and describe its location, purpose and operation.
  - i) drain valves
  - ii) drain cups
  - iii) air gaps
- 8. Describe the procedures used to layout and install system drainage and components.
- 9. Describe and apply mathematical concepts related to system drainage.

## SSI-215 Commissioning Water Supply Systems I

### **Learning Outcomes:**

 Demonstrate knowledge of the procedures used to commission water supply systems.

#### 2017 Red Seal Occupational Standard Reference:

- 3.01 Interprets codes, standards, regulations and procedures.
- 3.03 Uses documentation and reference material.
- 4.01 Commissions water supply systems.

#### **Suggested Hours:**

13 Hours

#### **Objectives and Content:**

- 1. Define terminology associated with participating in the commissioning of water supply systems.
- 2. Identify workplace hazards and describe safe work practices pertaining to participating in the commissioning of water supply systems.
- 3. Identify codes, standards and regulations pertaining to participating in the commissioning of water supply systems.
- 4. Interpret information pertaining to participating in the commissioning of water supply systems found on drawings and specifications.
- 5. Identify tests to be performed on water supply systems.
- 6. Describe the procedures used to commission water supply systems.
- 7. Calculate flow rates and discharge pressures.

## SSI-220 Commissioning Fire Protection Systems I

#### **Learning Outcomes:**

 Demonstrate knowledge of the procedures used to commission fire protection systems.

#### 2017 Red Seal Occupational Standard Reference:

- 3.01 Interprets codes, standards, regulations and procedures.
- 3.03 Uses documentation and reference material.
- 4.02 Commissions fire protection systems.

#### **Suggested Hours:**

13 Hours

#### **Objectives and Content:**

- 1. Define terminology associated with participating in the commissioning of fire protection systems.
- 2. Identify safety hazards and describe safe work practices pertaining to participating in the commissioning of fire protection systems.
- 3. Identify codes, standards and regulations pertaining to participating in the commissioning of fire protection systems.
- 4. Interpret information pertaining to participating in the commissioning of fire protection systems found on drawings and specifications.
- 5. Identify tests and checks to be performed on fire protection systems.
- 6. Describe the procedures used to commission fire protection systems.

#### SSI-225 Seismic Protection

### **Learning Outcomes:**

- Demonstrate knowledge of the procedures used to select and locate sway/seismic bracing.
- Demonstrate knowledge of the procedures used to install sway/seismic bracing.

#### 2017 Red Seal Occupational Standard Reference:

- 3.01 Interprets codes, standards, regulations and procedures.
- 3.03 Uses documentation and reference material.
- 12.05 Installs seismic-protection.

### **Suggested Hours:**

14 Hours

#### **Objectives and Content:**

- 1. Define terminology associated with sway/seismic bracing.
- 2. Identify hazards and describe safe work practices pertaining to sway/seismic bracing.
- 3. Identify codes, standards and regulations pertaining to sway/seismic bracing.
- 4. Interpret information pertaining to sway/seismic bracing found on drawings and specifications.
- 5. Identify tools and equipment relating to sway/seismic bracing, and describe their applications and procedures for use.
- 6. Identify types of sway/seismic bracing, and describe their purpose and applications.

- 7. Identify types of fasteners and inserts, and describe their characteristics and applications.
- 8. Describe the procedures used to install sway/seismic bracing assemblies.
- 9. Describe the procedures used to install fasteners and inserts.
- 10. Describe the procedures used to install flexible joints.
- 11. Describe and apply mathematical concepts related to seismic protection.
  - i) converting decimal feet in a linear measurement
  - ii) geometry
  - iii) Pythagorean theorem
  - iv) pipe layout

#### SSI-230 Cross-Connection Control

#### **Learning Outcomes:**

- Demonstrate knowledge of cross-connection control assemblies, their applications and operating principles.
- Demonstrate knowledge of the procedures used to install cross-connection control assemblies.

#### 2017 Red Seal Occupational Standard Reference:

- 3.01 Interprets codes, standards, regulations and procedures.
- 3.03 Uses documentation and reference material.
- 12.06 Installs cross-connection control assemblies.

#### **Suggested Hours:**

9 Hours

#### **Objectives and Content:**

- 1. Define terminology associated with cross-connection control assemblies.
- 2. Identify types of cross-connection control assemblies, and describe their characteristics, purpose and operation.
  - i) reduced pressure backflow (RP)
  - ii) double check valve assembly (DCVA)
- 3. Identify hazards and describe safe work practices pertaining to cross-connection control assemblies.
- 4. Identify codes, standards and regulations pertaining to cross-connection control assemblies.
- 5. Identify training and certification requirements regarding testing of crossconnection control assemblies.

- 6. Interpret information pertaining to cross-connection control assemblies found on drawings and specifications.
- 7. Identify tools and equipment pertaining to cross-connection control assemblies, and describe their applications and procedures for use.
- 8. Identify the factors to consider for selecting and installing cross-connection control assemblies.
- 9. Describe the procedures used to install cross-connection control assemblies.

## SSI-235 Standpipe and Hose Systems

#### **Learning Outcomes:**

- Demonstrate knowledge of standpipe and hose systems, their applications and operating principles.
- Demonstrate knowledge of installation requirements and associated test procedures for standpipe systems.

#### 2017 Red Seal Occupational Standard Reference:

- 3.01 Interprets codes, standards, regulations and procedures.
- 3.03 Uses documentation and reference material.
- 13.06 Installs standpipe systems.

#### **Suggested Hours:**

25 Hours

#### **Objectives and Content:**

- 1. Define terminology associated with standpipe and hose systems.
- 2. Identify hazards and describe safe work practices pertaining to standpipe and hose systems.
- 3. Identify codes, standards and regulations pertaining to standpipe and hose systems.
- 4. Identify code requirements pertaining to flushing connections in piping systems.
- 5. Interpret information pertaining to standpipe and hose systems found on drawings and specifications.
- 6. Identify tools and equipment relating to standpipe and hose systems, and describe their applications and procedures for use.

- 7. Identify the classes of standpipe systems, and describe their characteristics and applications.
  - i) class 1
  - ii) class 2
  - iii) class 3
- 8. Identify types of standpipe systems, and describe their operating principles, characteristics and applications.
  - i) wet pipe
  - ii) dry pipe
  - iii) manual
  - iv) automatic
  - v) combined
  - vi) semi-automatic dry
- 9. Identify the factors to consider and the requirements to determine standpipe system design.
  - i) pipe sizing
  - ii) flow rate
  - iii) pressures
  - iv) hose valve location
  - v) hose thread connection
  - vi) AHJ
  - vii) gauge location
- 10. Identify types of hoses, hose valves and associated fittings, and describe their characteristics and applications.
- 11. Identify types of hose cabinets and hose stations.
- 12. Identify types of hose spray nozzles, and describe their applications.
- 13. Describe the procedures used to lay out standpipe and hose systems.
- 14. Describe the procedures used to install hose cabinets and stations, and associated equipment.
- 15. Describe the procedures used to install hose spray nozzles.
- 16. Describe the procedures used to test and maintain standpipe systems.

- 17. Identify the requirements for pressure testing of standpipe and hose systems, and describe the associated procedures.
- 18. Describe and apply mathematical concepts related to standpipe and hose systems.
  - i) converting decimal feet in a linear measurement
  - ii) geometry
  - iii) Pythagorean theorem
  - iv) pipe layout

# SSI-240 Water Supply, Hydrants and Fire Department Connections

#### **Learning Outcomes:**

- Demonstrate knowledge of safety procedures and requirements for trenching and backfilling.
- Demonstrate knowledge of communication practices for trenching and backfilling.
- Demonstrate knowledge of clearances and tolerances for underground piping.
- Demonstrate knowledge of water source connections for underground piping.
- Demonstrate knowledge of underground piping and their components' installation procedures.
- Demonstrate knowledge of flushing requirements of underground systems.
- Demonstrate knowledge of safe work procedures for flushing of underground systems.
- Demonstrate knowledge of fire department equipment and their installation procedures.
- Demonstrate knowledge of fire department equipment and their installation procedures.

#### 2017 Red Seal Occupational Standard Reference:

- 3.01 Interprets codes, standards, regulations and procedures.
- 3.03 Uses documentation and reference material.
- 6.01 Supervises trenching and backfilling
- 6.02 Installs underground piping and components.
- 6.03 Flushes underground system.
- 8.01 Determines location, size and type of fire department connections.
- 8.02 Installs fire department connection piping and components.

#### **Suggested Hours:**

24 Hours

#### **Objectives and Content:**

- 1. Define terminology associated with water supply, hydrants and fire department connections.
- 2. Identify worksite hazards and describe safe work practices pertaining to water supply, hydrants and fire department connections.
  - i) personal safety
  - ii) safety of infrastructure
  - iii) environmental requirements
- 3. Identify codes, standards and regulations pertaining to water supply, hydrants and fire department connections.
- 4. Interpret information pertaining to water supply, hydrants and fire department connections, found on drawings and specifications.
- 5. Identify tools and equipment relating to water supply, hydrants and fire department connections.
  - i) pitot tube
  - ii) fire hoses
  - iii) fire hydrant wrenches
  - iv) diffusers
  - v) burlap sack and tie wires
  - vi) cut-off saws
  - vii) portable grinders
  - viii) torque wrenches
  - ix) pry bars
  - x) measuring devices
  - xi) levels
  - xii) straight edges
- 6. Identify types of access equipment related to trenching and backfilling.
- 7. Identify types of water supply, hydrants and fire department connections, and describe their purpose and their installation requirements.
  - i) water supply
    - municipal water supply
    - raw water sources
    - tanks
    - cisterns
  - ii) fire department hose connections

- National Hose Standard (NHS)
- Canadian Standards Association (CSA)
- Storz
- iii) installation requirements
  - requirements for check valves
  - placement of fire department connections
  - requirements for drainage of fire department connections
  - requirements for hose thread connections (AHJ)
- 8. Identify required flow rates for flushing of underground systems.
- 9. Identify required proximity of fire department connections in relation to hydrants.
- 10. Describe audible/visual procedures for communicating during trenching and backfilling.
- 11. Describe shoring requirements and piping requirements for water supply, hydrants and fire department connections.
- 12. Describe site conditions that affect trenching and backfilling.
- 13. Describe the procedures used to flush underground systems.
- 14. Describe procedures used to install underground water mains.
  - i) joining
  - ii) controlling thrust
  - iii) trenching and shoring
  - iv) bedding and backfilling
  - v) leakage testing
  - vi) chlorination/disinfection
  - vii) flushing
  - viii) completing documentation
- 15. Describe and apply mathematical concepts related to water supply, hydrants and fire department connections.
  - i) converting decimal feet in a linear measurement
  - ii) geometry
  - iii) Pythagorean theorem
  - iv) pipe layout

- 1. Assemble underground piping.
- 2. Flow testing.
- 3. Flush and treat an underground system.

## SSI-245 Detection Devices

#### **Learning Outcomes:**

- Demonstrate knowledge of the procedures used to install, test and maintain wet and dry pilot lines and their associated pilot line detectors.
- Demonstrate knowledge of the procedures used to install, test and maintain heat-actuated devices (HADs) and their associated components.

#### 2017 Red Seal Occupational Standard Reference:

- 3.01 Interprets codes, standards, regulations and procedures.
- 3.03 Uses documentation and reference material.
- 15.01 Installs wet and dry pilot lines.
- 15.02 Installs heat-actuated devices. (HADs)

#### **Suggested Hours:**

14 Hours

#### **Objectives and Content:**

- 1. Define terminology associated with wet and dry pilot lines.
- 2. Define terminology associated with heat-actuated devices (HADs).
- Identify hazards and describe safe work practices pertaining to wet and dry pilot lines.
- 4. Identify hazards and describe safe work practices pertaining to HADs.
- 5. Identify codes, standards and regulations pertaining to wet and dry pilot lines.
- 6. Identify codes, standards and regulations pertaining to HADs.
- 7. Interpret information pertaining to wet and dry pilot lines, found on drawings and specifications.

- 8. Interpret information pertaining to HADs, found on drawings and specifications.
- 9. Identify tools and equipment relating to wet and dry pilot lines, and describe their applications and procedures for use.
- 10. Identify tools and equipment relating to HADs, and describe their applications and procedures for use.
- 11. Identify types of wet and dry pilot lines and their components, and describe their characteristics, parameters and applications.
- 12. Identify types of HADs and describe their characteristics, parameters and applications.
  - i) types of HADs
    - fixed temperature
    - rate of rise detectors
    - linear heat detector
  - ii) parameters
    - spacing
    - temperature
    - type
- 13. Describe the procedures used to install, test and maintain wet and dry pilot lines.
- 14. Describe the procedures used to install, test and maintain HADs.

## SSI-250 Signal-Initiating Devices

#### **Learning Outcomes:**

- Demonstrate knowledge of the procedures used to test alarm-initiating devices.
- Demonstrate knowledge of procedure used to install alarm-initiating devices.
- Demonstrate knowledge of procedures used to maintain alarm-initiating devices.
- Demonstrate knowledge of the procedures used to test supervisory-initiating devices.
- Demonstrate knowledge of procedure used to install supervisory-initiating devices.
- Demonstrate knowledge of procedures used to maintain supervisory-initiating devices.

#### 2017 Red Seal Occupational Standard Reference:

- 3.01 Interprets codes, standards, regulations and procedures.
- 3.03 Uses documentation and reference material.
- 16.01 Installs alarm-initiating devices.
- 16.02 Installs supervisory-initiating devices.

#### **Suggested Hours:**

16 Hours

#### **Objectives and Content:**

- 1. Define terminology associated with signal-initiating devices.
- 2. Identify hazards and describe safe work practices pertaining to signal-initiating devices.
- 3. Identify codes, standards and regulations pertaining to signal-initiating devices.
- 4. Interpret information pertaining to signal-initiating devices found on drawings and specifications.

- 5. Identify tools and equipment relating to signal-initiating devices, and describe their applications and procedures for use.
- 6. Identify types of signal-initiating devices, and describe their applications and operating principles.
  - i) alarm-initiating devices
    - paddle-type flow switches
    - pressure switches
  - ii) supervisory-initiating devices
    - low air pressure
    - low water pressure
    - tamper (switches)
- 7. Describe the procedures used to install signal-initiating devices.
- 8. Describe the procedures used to test and maintain signal-initiating devices.
- 9. Identify installation locations for signal-initiating devices.

- 1. Adjust a pressure switch.
- 2. Troubleshoot signal-initiating devices using multimeters.

## SSI-255 Pre-Action Systems II

#### **Learning Outcomes:**

- Demonstrate knowledge of pre-action systems, their applications and operating principles.
- Demonstrate knowledge of installation requirements and associated test procedures for pre-action systems.

#### 2017 Red Seal Occupational Standard Reference:

- 3.01 Interprets codes, standards, regulations and procedures.
- 3.03 Uses documentation and reference material.
- 13.04 Installs pre-action/deluge systems.

#### **Suggested Hours:**

28 Hours

#### **Objectives and Content:**

- 1. Define terminology associated with pre-action systems.
- 2. Identify hazards and describe safe work practices pertaining to pre-action systems.
- 3. Identify codes, standards and regulations pertaining to pre-action systems.
- 4. Interpret information pertaining to pre-action systems found on drawings and specifications.
- 5. Identify tools and equipment relating to pre-action systems, and describe their applications and procedures for use.
- 6. Identify types of pre-action systems, and describe their operating principles and applications.
  - i) pre-action systems

- non-interlock
- single interlock
- double interlock
- ii) applications
  - computer/data rooms
  - freezers
  - aircraft hangers
  - electrical rooms
- 7. Identify trim components used on pre-action valves, and describe their design variations and applications.
- 8. Identify types of alarms that a pre-action valve will operate.
  - i) solenoid actuators
  - ii) diaphragm actuators
- 9. Identify supplemental fire detection systems, and describe their operating principles and applications.
  - i) electric
  - ii) pneumatic
  - iii) hydraulic
- 10. Identify the system controls required for pre-action systems.
- 11. Describe the procedures used to install system controls required for pre-action systems.
- 12. Explain the requirements for drainage of pre-action systems.
- 13. Describe the procedures used to layout and install pre-action systems.
- 14. Describe the procedures used to trim pre-action valves.
- 15. Describe the procedures used to service and maintain pre-action systems.
- 16. Identify the requirements for functional and pressure testing of pre-action systems and describe the associated procedures.
- 17. Describe and apply mathematical concepts related to applications and pre-action systems.

- i) converting decimal feet in a linear measurement
- ii) geometry
- iii) Pythagorean theorem
- iv) pipe layout

1. Trim, test and reset a valve.

## SSI-260 Deluge Systems II

#### **Learning Outcomes:**

- Demonstrate knowledge of deluge systems, their applications and operating principles.
- Demonstrate knowledge of installation requirements and associated test procedures for deluge systems.

#### 2017 Red Seal Occupational Standard Reference:

- 3.01 Interprets codes, standards, regulations and procedures.
- 3.03 Uses documentation and reference material.
- 13.04 Installs pre-action/deluge systems.

## **Suggested Hours:**

26 Hours

#### **Objectives and Content:**

- 1. Define terminology associated with deluge systems.
- 2. Identify hazards and describe safe work practices pertaining to deluge systems.
- 3. Identify codes, standards and regulations pertaining to deluge systems.
- 4. Interpret information pertaining to deluge systems found on drawings and specifications.
- 5. Identify tools and equipment relating to deluge systems, and describe their applications and procedures for use.
- 6. Identify types of deluge systems, and describe their operating principles and applications.
  - i) deluge systems
    - deluge

- high speed deluge
- ii) applications
  - aircraft hangers
  - petro-chemical
  - mining
  - pulp and paper
  - theatrical stages
  - marine
  - wharfs
  - transformers
- 7. Identify trim components used on deluge valves, and describe their design variations and applications.
- 8. Identify types of alarms that a deluge valve will operate.
  - i) solenoid actuators
  - ii) diaphragm actuators
- 9. Identify supplemental fire detection systems, and describe their operating principles and applications.
  - i) electric
  - ii) pneumatic
  - iii) hydraulic
- 10. Identify the system controls required for deluge systems.
- 11. Describe the procedures used to install system controls required for deluge systems.
- 12. Describe the requirements for drainage of deluge systems.
- 13. Describe the procedures used to lay out and install deluge systems.
- 14. Describe the procedures used to trim deluge valves.
- 15. Describe the procedures used to service and maintain deluge systems.
- 16. Identify the requirements for functional and pressure testing of deluge systems and describe the associated procedures.

- 17. Describe and apply mathematical concepts related to application deluge systems.
  - i) converting decimal feet in a linear measurement
  - ii) geometry
  - iii) Pythagorean theorem
  - iv) pipe layout

1. Trim, test and reset a valve.

### SSI-300 Portable Fire Extinguishers

#### **Learning Outcomes:**

- Demonstrate knowledge of procedures and requirements used to install portable fire extinguishers.
- Demonstrate knowledge of the procedures used to inspect and maintain portable fire extinguishers.

#### 2017 Red Seal Occupational Standard Reference:

- 14.02 Installs portable extinguishers.
- 18.03 Inspects portable fire extinguishers.

#### **Suggested Hours:**

8 Hours

#### **Objectives and Content:**

- 1. Define terminology associated with portable fire extinguishers.
- 2. Identify hazards and describe safe work practices pertaining to portable fire extinguishers.
- 3. Identify codes, standards and regulations pertaining to portable fire extinguishers.
- 4. Interpret information pertaining to portable fire extinguishers found on drawings and specifications.
- 5. Identify tools and equipment relating to portable fire extinguishers, and describe their applications and procedures for use.
- 6. Identify classes and types of portable fire extinguishers, and describe their characteristics, operation and applications.
  - i) wet and dry chemical

- ii) carbon dioxide
- iii) water-based
- iv) clean agent
- 7. Identify the components of portable fire extinguishers.
- 8. Identify the installation requirements and procedures for portable fire extinguishers and cabinets.
- 9. Identify installation locations for portable fire extinguishers.
  - i) cabinet
  - ii) wall-mount
  - iii) wheeled
- 10. Describe the procedures used to operate portable fire extinguishers.
- 11. Describe the liabilities and responsibilities for the installation of portable fire extinguishers.
- 12. Describe the procedures used to inspect and service portable fire extinguishers

# SSI-305 Fire Pumps & Controllers

## **Learning Outcomes:**

- Demonstrate knowledge of pumps, drivers, controllers and components.
- Demonstrate knowledge of water source connections.
- Demonstrate knowledge of the procedures used to install fire pumps.

#### 2017 Red Seal Occupational Standard Reference:

- 3.01 Interprets codes, standards, regulations and procedures.
- 3.03 Uses documentation and reference material.
- 7.01 Determinates location of pumps, drivers, controllers and components.
- 7.02 Installs pumps, drivers, controllers and components.

#### **Suggested Hours:**

24 Hours

#### **Objectives and Content:**

- 1. Define terminology associated with locating and installing pumps, drivers, controllers and components.
- 2. Identify hazards and describe safe work practices pertaining to locating and installing pumps, drivers, controllers and components.
  - i) personal safety
  - ii) safety of infrastructure
  - iii) environmental requirements
- 3. Identify codes, standards and regulations pertaining to locating and installing pumps, drivers, controllers and components.
- 4. Interpret information pertaining to locating and installing pumps, drivers, controllers and components, found on drawings and specifications.

- 5. Identify tools and equipment relating to locating and installing pumps, drivers, controllers and components, and describe their applications and procedures for use.
  - i) measuring devices
  - ii) chalk lines
  - iii) laser levels
  - iv) straight edges
  - v) hoisting equipment
- 6. Identify types of water supplies used for fire pump installations and system demand requirements.
  - i) municipal
  - ii) limited (tanks, reservoirs)
  - iii) raw water
- 7. Identify the requirements of cross-connection control as they relate to fire pump demand.
- 8. Identify fire pump components.
  - i) sensing lines
  - ii) test headers
  - iii) flow meters
  - iv) by-pass connections
  - v) relief valves
  - vi) controller cabinets
  - vii) suction and discharge piping
  - viii) anti-vortex plate
- 9. Identify types of fire pumps.
  - i) diesel
  - ii) electric
  - iii) steam
- 10. Describe the procedures used to install fire pumps.
- 11. Describe and apply mathematical concepts related to fire pumps and controllers.
  - i) converting decimal feet in a linear measurement
  - ii) geometry
  - iii) pipe layout

- 1. Interpret graphs for flow calculations.
- 2. Plot a pump curve on a graph.

# SSI-310 Private Water Supply Systems

## **Learning Outcomes:**

- Demonstrate knowledge of water tanks and related equipment.
- Demonstrate knowledge of the procedures used to install of water tanks and related equipment.

#### 2017 Red Seal Occupational Standard Reference:

- 3.01 Interprets codes, standards, regulations and procedures.
- 3.03 Uses documentation and reference material.
- 9.01 Installs water tanks.
- 9.02 Installs related equipment.

#### **Suggested Hours:**

16 Hours

#### **Objectives and Content:**

- 1. Define terminology associated with water tanks and related equipment.
- 2. Identify hazards and describe safe work practices pertaining to water tanks and related equipment.
- 3. Identify codes, standards and regulations pertaining to water tanks and related equipment.
- 4. Interpret information pertaining to water tanks and related equipment found on drawings and specifications.
- 5. Identify tools and equipment pertaining to water tanks and related equipment, and describe their applications and procedures for use.
- 6. Identify types of water tanks and related equipment, and describe their characteristics, principles of operation and applications.

- i) water tanks
  - gravity
  - pressure
  - below-grade
  - residential water supply
- ii) related equipment
  - overflow
  - vent
  - water level
  - drain and heating system
- 7. Identify types of water supplies, and describe their purpose and installation requirements.
  - i) water supply
    - raw water sources
    - tanks
    - cisterns
- 8. Identify types of water connections and their associated components.
- 9. Identify the methods used for protection of tanks.
- 10. Identify the arrangement of fire pump unit components.
- 11. Describe procedures used in the installation of water tanks and related equipment.
- 12. Describe procedures used to maintain private water supply systems.
- 13. Describe supply and discharge piping requirements.
- 14. Describe and apply mathematical concepts related to private water supply systems.
  - i) converting decimal feet in a linear measurement
  - ii) head pressures
  - iii) water volume
  - iv) unit conversion

# SSI-315 Drawings III

## **Learning Outcomes:**

- Demonstrate knowledge of sprinkler system drawings and on-site drawings.
- Demonstrate knowledge of the procedures to read and interpret drawings and on-site drawings.
- Demonstrate knowledge of the procedures to draw and label orthographic and isometric drawings.
- Demonstrate knowledge of the procedures to read and interpret information pertaining to sprinkler systems found in construction drawings.

## 2017 Red Seal Occupational Standard Reference:

3.02 Uses drawings and specifications.

#### **Suggested Hours:**

18 Hours

# **Objectives and Content:**

- 1. Define terminology associated with reading and sketching drawings.
- 2. Explain the fundamentals of orthographic and isometric projections.
- 3. Identify types of lines found on sprinkler system drawings.
  - i) object (visible)
  - ii) hidden
  - iii) center
  - iv) dimension
  - v) extension
  - vi) section cutting
  - vii) material section
- 4. Identify symbols found on sprinkler system drawings.

- 5. Identify types of views found on sprinkler system drawings.
  - i) plan
  - ii) elevation
  - iii) sections
  - iv) details
- 6. Identify types of scales and describe their characteristics and applications.
  - i) metric scale (S.I.)
  - ii) architect scale (imperial)
  - iii) engineer scales
- 7. Identify drafting tools and drawing equipment, and describe their applications and procedures for use.
- 8. Identify divisions of drawings and describe their purpose.
  - i) architectural
  - ii) structural
  - iii) mechanical
  - iv) electrical
  - v) plot
  - vi) specifications
  - vii) schedules
- 9. Identify views and drawings of a building, and describe their purpose.
- 10. Describe the procedures used to interpret sprinkler systems information found on drawings.
- 11. Describe the procedures used to interpret dimensions on drawings.
- 12. Describe the procedures used to interpret a site plan in both metric and imperial units.
- 13. Describe the procedures used to create orthographic and isometric drawings.
- 14. Describe the procedures used to interpret metric and imperial scaling.
- 15. Describe the procedures used to prepare orthographic and isometric sketches.

- 16. Describe the procedures used to prepare single line pipe drawings such as orthographic and isometric.
- 17. Describe the procedures used to perform material take-offs.
- 18. Describe the procedures used to create as-built drawings.

- 1. Generate a material take-off list.
- 2. Generate an as-built drawing.

# SSI-320 Commissioning Water Supply Systems II

## **Learning Outcomes:**

 Demonstrate knowledge of the procedures used to commission water supply systems.

#### 2017 Red Seal Occupational Standard Reference:

- 3.01 Interprets codes, standards, regulations and procedures.
- 3.03 Uses documentation and reference material.
- 4.01 Commissions water supply systems.

#### **Suggested Hours:**

9 Hours

### **Objectives and Content:**

- 1. Define terminology associated with the commissioning of water supply systems.
- 2. Identify workplace hazards and describe safe work practices pertaining to the commissioning of water supply systems.
- 3. Identify codes, standards and regulations pertaining to the commissioning of water supply systems.
- 4. Interpret information pertaining to the commissioning of water supply systems found on drawings and specifications.
- 5. Identify tests to be performed on water supply systems.
  - i) hydrostatic
  - ii) chlorination
  - iii) flushing
  - iv) acceptance test of fire pump
  - v) component operation (cross-connection control assemblies, water tanks, reservoirs)

- vi) signal initiating devices
- 6. Describe the procedures used to commission water supply systems.
- 7. Calculate flow rates and discharge pressures.

# SSI-325 Commissioning Fire Protection Systems II

## **Learning Outcomes:**

 Demonstrate knowledge of the procedures used to commission fire protection systems.

# 2017 Red Seal Occupational Standard Reference:

- 3.01 Interprets codes, standards, regulations and procedures.
- 3.03 Uses documentation and reference material.
- 4.02 Commissions fire protection systems.

#### **Suggested Hours:**

12 Hours

#### **Objectives and Content:**

- 1. Define terminology associated with commissioning of fire protection systems.
- 2. Identify safety hazards and describe safe work practices pertaining to the commissioning of fire protection systems.
- 3. Identify codes, standards and regulations pertaining to the commissioning of fire protection systems.
- 4. Interpret information pertaining to the commissioning of fire protection systems found on drawings and specifications.
- 5. Identify tests and checks to be performed on fire protection systems.
  - i) hydrostatic
  - ii) pneumatic
  - iii) seal of penetrations
  - iv) placement of
    - hangers
    - brackets

- supports
- restraints
- v) grade/elevation
- vi) flushing and swabbing
- vii) labelling
- viii) blank testing gaskets
- ix) escutcheons
- x) performance (trip test)
- 6. Describe the procedures used to commission fire protection systems.

# SSI-330 Mentoring Techniques

## **Learning Outcomes:**

- Demonstrate knowledge of trade terminology.
- Demonstrate knowledge of effective communication practices.
- Demonstrate knowledge of strategies for learning skills in the workplace.
- Demonstrate knowledge of strategies for teaching workplace skills.

## 2017 Red Seal Occupational Standard Reference:

- 3.01 Interprets codes, standards, regulations and procedures.
- 3.03 Uses documentation and reference material.
- 5.01 Uses communication techniques.
- 5.02 Uses mentoring techniques.

#### **Suggested Hours:**

14 Hours

# **Objectives and Content:**

- 1. Define terminology used in the trade.
- 2. Describe the importance of using effective verbal and non-verbal communication with people in the workplace.
  - i) other tradespeople
  - ii) colleagues
  - iii) apprentices
  - iv) supervisors
  - v) clients
  - vi) authority having jurisdiction
  - vii) manufacturers
- 3. Identify sources of information to effectively communicate.

- 4. Identify communication and learning styles.
  - i) learning styles
    - audible
    - visual
    - experiential
    - theoretical
    - any combination of the above
- 5. Describe effective listening and speaking skills.
  - i) hearing
  - ii) interpreting
  - iii) reflecting
  - iv) responding
  - v) paraphrasing
- 6. Identify personal responsibilities and attitudes that contribute to on-the-job success.
  - i) asking questions
  - ii) working safely
  - iii) accepting constructive feedback
  - iv) time management and punctuality
  - v) respect for authority
  - vi) good stewardship of materials, tools and property
  - vii) efficient work practices
- 7. Identify the value of diversity in the workplace.
- 8. Identify communication that constitutes harassment and discrimination.
  - i) harassment
    - objectionable conduct
    - comment or display made either on a one-time or continuous basis that demeans, belittles, or causes personal humiliation or embarrassment to the recipient
  - ii) discrimination
    - an opinion or negative action of someone based on race, national or ethnic origin, colour, religion, age, sex, sexual orientation, marital status, family status, disability or conviction for which a pardon has been granted
- 9. Describe the importance of individual experience in the mentoring process.

- 10. Describe the shared responsibilities for workplace learning.
- 11. Determine one's own learning preferences and explain how these relate to learning new skills.
- 12. Describe the importance of different types of skills in the workplace.
- 13. Describe the importance of essential skills in the workplace.
  - i) reading
  - ii) document use
  - iii) writing
  - iv) oral communication
  - v) numeracy
  - vi) thinking
  - vii) working with others
  - viii) digital technology
  - ix) continuous learning
- 14. Identify different ways of learning.
- 15. Identify different learning needs and strategies to meet learning needs.
  - i) learning needs
    - learning disabilities
    - learning preferences
    - language proficiency
- 16. Identify strategies to assist in learning a skill.
  - i) understanding the basic principles of instruction
  - ii) developing coaching skills
  - iii) being patient
  - iv) providing feedback
- 17. Identify different roles played by a workplace mentor.
- 18. Describe the steps involved in teaching skills.
  - i) identifying the point of the lesson
  - ii) linking the lesson
  - iii) demonstrating the skill
  - iv) providing practice

- v) giving feedback
- vi) assessing skills and progress
- 19. Explain the importance of identifying the point of a lesson.
- 20. Identify how to choose a good time to present a lesson.
- 21. Explain the importance of linking the lessons.
- 22. Identify the components of the skill (the context).
- 23. Describe considerations in setting up opportunities for skill practice.
- 24. Explain the importance of providing feedback.
- 25. Identify techniques for giving effective feedback.
- 26. Describe a skills assessment.
- 27. Identify methods of assessing progress.
- 28. Explain how to adjust a lesson to different situations.

# SSI-335 Wet and Dry Chemical Extinguishing Systems

## **Learning Outcomes:**

- Demonstrate knowledge of wet and dry chemical systems, their applications and operating principles.
  - Demonstrate knowledge of installation of wet and dry chemical systems.
- Demonstrate knowledge of procedures used to inspect and maintain wet and dry chemical systems.

#### 2017 Red Seal Occupational Standard Reference:

- 3.01 Interprets codes, standards, regulations and procedures.
- 3.03 Uses documentation and reference material.
- 14.01 Installs dry and wet chemical, clean agent and carbon dioxide systems.

#### **Suggested Hours:**

10 Hours

# Objectives and Content:

- 1. Define terminology associated with wet and dry chemical systems.
- 2. Identify hazards and describe safe work practices pertaining to wet and dry chemical systems.
- 3. Identify codes, standards, regulations and manufacturers' specifications pertaining to wet and dry chemical systems.
- 4. Interpret information pertaining to wet and dry chemical systems found on drawings and specifications.
- 5. Identify tools and equipment relating to wet and dry chemical systems, and describe their applications and procedures for use.
  - i) swabs
  - ii) acetone

- iii) rags
- 6. Identify types of wet and dry chemical systems, and describe their characteristics, operation and applications.
- 7. Identify applicable certification requirements pertaining to wet and dry chemical systems.
- 8. Identify the components of wet and dry chemical systems, and describe their purpose and operation.
- 9. Identify types of pipe and fittings used for wet and dry chemical systems.
- 10. Describe fixed pipe systems.
  - i) total flooding
  - ii) local application
- 11. Describe the operating principles and applications of wet and dry chemical systems.
- 12. Identify the extinguishing properties of wet and dry chemical systems.
- 13. Identify the factors to consider and limitations pertaining to wet and dry chemical systems.
- 14. Identify the installation requirements for wet and dry chemical systems.
- 15. Describe the procedures used to install wet and dry chemical systems.
- 16. Identify the requirements of inspection and acceptance testing of wet and dry chemical systems.
- 17. Describe the liabilities and responsibilities for the inspection and testing of wet and dry chemical systems.
- 18. Describe the procedures used to service, maintain and remove wet and dry chemical systems.

# SSI-340 Water Mist and Hybrid Extinguishing Systems

## **Learning Outcomes:**

- Demonstrate knowledge of water mist and hybrid systems, their applications and operating principles.
- Demonstrate knowledge of procedures used to install water mist and hybrid systems.

# 2017 Red Seal Occupational Standard Reference:

- 3.01 Interprets codes, standards, regulations and procedures.
- 3.03 Uses documentation and reference material.
- 13.07 Installs water mist and hybrid systems.

#### **Suggested Hours:**

10 Hours

## **Objectives and Content:**

- 1. Define terminology associated with water mist and hybrid systems.
- 2. Identify hazards and describe safe work practices pertaining to water mist and hybrid systems.
- 3. Identify codes, standards and regulations pertaining to water mist and hybrid systems.
- 4. Interpret information pertaining to water mist and hybrid systems found on drawings and specifications.
- 5. Identify tools and equipment relating to water mist and hybrid systems, and describe their applications and procedures for use.

- 6. Identify types of water mist and hybrid systems, and describe their operating principles, characteristics and applications.
  - i) single fluid
  - ii) twin fluid
  - iii) high pressure
  - iv) medium pressure
  - v) low pressure
- 7. Identify applicable certification requirements pertaining to water mist and hybrid systems.
- 8. Describe the procedures used to layout and install water mist and hybrid systems and components.
- 9. Identify system controls for water mist and hybrid systems and their installation requirements.
  - i) materials
  - ii) supports and hangers
  - iii) system actuation
  - iv) testing
  - v) manufacturers' specifications/training
  - vi) handling and storage
- 10. Explain the requirements for drainage of water mist and hybrid systems.
- 11. Identify the requirements for pressure testing of water mist and hybrid systems and describe the associated procedures.

# SSI-345 Foam Extinguishing Systems

## **Learning Outcomes:**

- Demonstrate knowledge of foam systems, their applications and operating principles.
- Demonstrate knowledge of procedures used to install foam.

#### 2017 Red Seal Occupational Standard Reference:

- 3.01 Interprets codes, standards, regulations and procedures.
- 3.03 Uses documentation and reference material.
- 13.05 Installs foam systems.

### **Suggested Hours:**

12 Hours

# **Objectives and Content:**

- 1. Define terminology associated with foam systems.
- 2. Identify hazards and describe safe work practices pertaining to foam systems.
  - i) environmental considerations
  - ii) containment
  - iii) disposal
- 3. Identify codes, standards and regulations pertaining to foam systems.
- 4. Interpret information pertaining to foam systems found on drawings and specifications.
- 5. Identify tools and equipment relating to foam systems, and describe their applications and procedures for use.
- 6. Identify types of foam systems, and describe their operating principles and applications.

- 7. Identify the system controls required for foam systems.
- 8. Identify types of concentrate used in foam systems, and describe their characteristics and applications.
  - i) aircraft hangers
  - ii) fuel storage tanks
  - iii) chemical manufacturing and storage facilities
- 9. Identify supplemental fire detection systems, and describe their operating principles and applications.
  - i) electric
  - ii) pneumatic
  - iii) hydraulic
- 10. Describe the procedures used to layout and install foam systems and components.
- 11. Describe the installation requirements of foam systems.
  - i) materials
  - ii) hangers
  - iii) supports and bracing
  - iv) system actuation
  - v) testing, manufacturers' specifications
- 12. Describe the procedures used to fill foam concentrate tanks.
- 13. Describe the requirements for drainage of the system.
- 14. Describe the operation of a balanced pressure proportioning system.
- 15. Describe the procedures used to trim foam systems.
- 16. Describe the operation of a pressure proportioning tank with and without bladder.
- 17. Describe the procedures used to test and maintain foam systems.
- 18. Identify the requirements for pressure testing of foam systems and describe the associated procedures.

# <u>Practical Objectives</u>

# SSI-350 Carbon Dioxide Extinguishing Systems

#### **Learning Outcomes:**

- Demonstrate knowledge of carbon dioxide systems and their operation and characteristics.
- Demonstrate knowledge of the procedures used to install carbon dioxide systems.
- Demonstrate knowledge of procedures used to inspect and maintain carbon dioxide systems.

### 2017 Red Seal Occupational Standard Reference:

- 3.01 Interprets codes, standards, regulations and procedures.
- 3.03 Uses documentation and reference material.
- 14.01 Installs dry and wet chemical, clean agent and carbon dioxide systems.

#### **Suggested Hours:**

9 Hours

#### Objectives and Content:

- 1. Define terminology associated with carbon dioxide systems.
- 2. Identify hazards and describe safe work practices pertaining to carbon dioxide systems.
- Identify codes, standards, regulations and manufacturers' specifications pertaining to carbon dioxide systems.
- 4. Interpret information pertaining to carbon dioxide systems found on drawings and specifications.
- 5. Identify tools and equipment relating to carbon dioxide systems, and describe their applications and procedures for use.
  - i) swabs

- ii) acetone
- iii) rags
- 6. Identify types of carbon dioxide systems, and describe their characteristics, operation and applications.
- 7. Identify applicable certification requirements pertaining to carbon dioxide systems.
- 8. Identify the components of carbon dioxide systems, and describe their purpose and operation.
- 9. Identify types of pipe and fittings used for carbon dioxide systems.
- 10. Describe fixed pipe systems.
  - i) total flooding
  - ii) local application
- 11. Identify the extinguishing properties of carbon dioxide systems.
- 12. Identify the factors to consider and limitations pertaining to carbon dioxide systems.
- 13. Identify the installation requirements for carbon dioxide systems.
- 14. Describe the procedures used to install carbon dioxide systems.
- 15. Identify the requirements of inspection and acceptance testing of carbon dioxide systems.
- 16. Describe the liabilities and responsibilities for the inspection and testing of carbon dioxide systems.
- 17. Describe the procedures used to service, maintain and remove carbon dioxide systems.
- 18. Describe the procedures used to calculate the quantity of carbon dioxide extinguishing agent required for a system.

# SSI-355 Clean Agent Extinguishing Systems

#### **Learning Outcomes:**

- Demonstrate knowledge of clean agent systems and their operation and characteristics.
- Demonstrate knowledge of installation of clean agent systems.
- Demonstrate knowledge of procedures used to inspect and maintain clean agent systems.

#### 2017 Red Seal Occupational Standard Reference:

- 3.01 Interprets codes, standards, regulations and procedures.
- 3.03 Uses documentation and reference material.
- 14.01 Installs dry and wet chemical, clean agent and carbon dioxide systems.

#### **Suggested Hours:**

8 Hours

# **Objectives and Content:**

- 1. Define terminology associated with clean agent systems.
- 2. Identify hazards and describe safe work practices pertaining to clean agent systems.
- 3. Identify codes, standards, regulations and manufacturers' specifications pertaining to clean agent systems.
- 4. Interpret information pertaining to clean agent systems found on drawings and specifications.
- 5. Identify tools and equipment relating to clean agent systems, and describe their applications and procedures for use.
  - i) swabs
  - ii) acetone

- iii) rags
- 6. Identify types of clean agent systems, and describe their characteristics, operation and applications.
- 7. Identify applicable certification requirements pertaining to clean agent extinguishing systems.
- 8. Identify the components of clean agent systems, and describe their purpose and operation.
- 9. Identify types of pipe and fittings used for clean agent systems.
- 10. Describe fixed pipe systems.
  - i) total flooding
  - ii) local application
- 11. Identify the extinguishing properties of clean agent systems.
- 12. Identify the factors to consider and limitations pertaining to clean agent systems.
- 13. Identify the installation requirements for clean agent systems.
- 14. Describe the procedures used to install clean agent systems.
- 15. Identify the requirements of inspection and acceptance testing of clean agent systems.
- 16. Describe the liabilities and responsibilities for the inspection and testing of clean agent systems.
- 17. Describe the procedures used to service, maintain and remove clean agent systems.
- 18. Describe the procedures used to calculate the quantity of clean agent extinguishing agent required for a system.

# SSI-360 Specialty Detection Devices

## **Learning Outcomes:**

- Demonstrate knowledge of the procedures used to install, test and maintain spark detection systems and their associated components.
- Demonstrate knowledge of the procedures used to install, test and maintain air sampling systems and their associated components.
- Demonstrate knowledge of the procedures used to install, test and maintain electrical detection systems and their associated components.

### 2017 Red Seal Occupational Standard Reference:

- 3.01 Interprets codes, standards, regulations and procedures.
- 3.03 Uses documentation and reference material.
- 15.03 Installs spark detection systems.
- 15.04 Installs air sampling systems.
- 15.05 Installs electrical detection systems.

#### **Suggested Hours:**

9 Hours

#### **Objectives and Content:**

- 1. Define terminology associated with specialty detection devices.
- 2. Identify hazards and describe safe work practices pertaining to specialty detection devices.
- 3. Identify codes, standards and regulations pertaining to specialty detection devices.
- 4. Interpret information pertaining to specialty detection devices found on drawings and specifications.

- 5. Identify tools and equipment relating to specialty detection devices, and describe their applications and procedures for use.
- 6. Identify types of specialty detection devices, and describe their characteristics, parameters and applications.
- 7. Describe the procedures used to install, test and maintain specialty detection devices.

# SSI-365 Fire Protection Systems Repair and Maintenance

#### **Learning Outcomes:**

- Demonstrate knowledge of procedures and requirements used to troubleshoot,
   repair and maintain fire protection systems and their components.
- Demonstrate knowledge of the relationship between sprinkler systems and fire panels.

## 2017 Red Seal Occupational Standard Reference:

- 3.01 Interprets codes, standards, regulations and procedures.
- 3.03 Uses documentation and reference material.
- 17.01 Troubleshoots fire protection systems.
- 17.02 Repairs deficiencies.
- 17.03 Performs scheduled maintenance.

#### **Suggested Hours:**

21 Hours

#### **Objectives and Content:**

- 1. Define terminology associated with troubleshooting, repairing and maintaining fire protection systems and their components.
- 2. Identify hazards and describe safe work practices pertaining to troubleshooting, repairing and maintaining fire protection systems and their components.
- Identify codes, standards and regulations pertaining to troubleshooting, repairing and maintaining fire protection systems and their components.
- 4. Identify tools and equipment relating to troubleshooting, repairing and maintaining fire protection systems, and describe their applications and procedures for use.

- 5. Identify types of fire panels and signals, and describe their operation and purpose.
  - i) fire panels
    - alarm
    - release
    - annunciator
  - ii) signals
    - trouble
    - alarm
    - supervisory
- 6. Identify the testing and troubleshooting methods for signaling devices.
- 7. Identify the classifications of needed corrections and repairs, and explain the associated requirements.
  - i) impairment (pre-plan and emergency)
  - ii) critical deficiency
  - iii) non-critical deficiency
- 8. Identify requirements for inspecting and testing systems that have been altered or repaired.
- 9. Identify common causes of fire protection system failures.
- 10. Identify frequency of maintenance of fire protection systems and components.
- 11. Describe the liabilities and responsibilities for the maintenance of fire protection systems.
- 12. Describe the operation of release devices.
- 13. Describe the procedures used to troubleshoot fire protection systems and components.
- 14. Describe the procedures used to repair fire protection systems and components.
- 15. Describe the procedures used to maintain fire protection systems and components.
  - i) checking for blockage or frost plugs
  - ii) changing desiccant in air dryers

- iii) cleaning strainers
- iv) investigating obstructions
- v) draining low points on dry and pre-action systems
- vi) performing lubrication and corrosion prevention measures
- 16. Describe the procedures used to shut down and reactivate sprinkler systems and associated alarms and supervisory devices.

# SSI-370 Fire Protection Systems Inspection and Testing

#### **Learning Outcomes:**

- Demonstrate knowledge of procedures and requirements used to test fire protection systems and their components.
- Demonstrate knowledge of the procedures and requirements to perform scheduled inspections of fire protection systems and their components.
- Demonstrate knowledge of the relationship between sprinkler systems and fire panels.

### 2017 Red Seal Occupational Standard Reference:

- 3.01 Interprets codes, standards, regulations and procedures.
- 3.03 Uses documentation and reference material.
- 18.01 Performs scheduled tests.
- 18.02 Performs scheduled inspections.

## **Suggested Hours:**

20 Hours

#### **Objectives and Content:**

- 1. Define terminology associated with the inspection and the testing of fire protection systems.
- 2. Identify hazards and describe safe work practices pertaining to the testing of fire protection systems.
- 3. Identify codes, standards and regulations pertaining to the inspection and testing of fire protection systems.
- 4. Interpret information found on drawings and specifications pertaining the inspection and testing of fire protection systems.

- 5. Identify tools and equipment relating to the inspection and testing of fire protection systems.
- 6. Identify frequency of the inspection and testing of fire protection systems.
- 7. Describe the liabilities and responsibilities for the inspection and testing of fire protection systems.
- 8. Identify requirements for the inspection and testing of fire protection systems.
- 9. Describe the procedures used to inspect and test fire protection systems
- 10. Identify applicable certification requirements pertaining to inspecting and testing fire protection systems

# SSI-375 Job Planning

## **Learning Outcomes:**

- Demonstrate knowledge of the procedures to plan and organize jobs.
- Demonstrate knowledge of the procedures to produce material take-off lists.

# 2017 Red Seal Occupational Standard Reference:

3.04 Plans job tasks and procedures.

#### **Suggested Hours:**

10 Hours

#### **Objectives and Content:**

- 1. Define terminology associated with job planning activities.
- 2. Identify sources of information relevant to job planning.
  - i) documentation
  - ii) drawings
  - iii) related professionals
  - iv) clients
- 3. Identify the factors to consider for determining job requirements.
  - i) personnel
  - ii) tools and equipment
  - iii) materials
  - iv) permits
- 4. Describe the procedures used to plan job tasks.
  - i) scheduling
  - ii) estimating
  - iii) coordinating site access
- 5. Describe the procedures used to receive and verify delivered materials.

- 6. Describe the procedures used to store, organize and maintain inventory.
- 7. Describe the procedures used to interpret and extract information from drawings.
- 8. Identify the purpose of submittals and shop drawings, and describe the procedures used to interpret them.
- 9. Identify the types of material take-off lists, and describe their applications and the procedures used to produce them.
  - i) material estimation
  - ii) material installation
- 10. Describe the procedures used to prepare work sites.
  - i) erecting barricades and flagging
  - ii) identifying hazards
  - iii) locating service points
  - iv) locating isolation points
- 11. Describe and apply mathematical concepts related to job planning.

- 1. Generate a complete job plan.
  - i) material list
  - ii) tools list
  - iii) labour quantities
  - iv) site access
  - v) safety requirements
  - vi) regulatory requirements

# SSI-380 Program Review

# **Learning Outcomes:**

- Demonstrate knowledge of the Red Seal Occupational Standard (RSOS) and its relationship to the Interprovincial Examination.
- Demonstrate knowledge of overall comprehension of the trade in preparation for the Red Seal Examination.

# Entire 2017 Red Seal Occupational Standard

# **Suggested Hours:**

30 Hours

## **Objectives and Content:**

- 1. Define terminology associated with a Red Seal Occupational Standard (RSOS).
  - i) levels
  - ii) major work activities
  - iii) tasks
  - iv) sub-tasks
- 2. Explain how an RSOS is developed and the link it has with the Red Seal Examination.
  - i) development
  - ii) validation
  - iii) level and task weighting
  - iv) examination breakdown (pie-chart)
- 3. Identify Red Seal products and describe their use for preparing for the Red Seal Examination.
  - i) Red Seal website
  - ii) examination preparation guide
  - iii) sample questions
  - iv) examination counselling sheets

- 4. Explain the relationship between the RSOS and the Atlantic Apprenticeship Curriculum Standard (AACS).
- 5. Review common occupational skills for the Sprinkler Fitter trade as identified in the RSOS.
  - i) safety-related functions
  - ii) tools and equipment
  - iii) organizes work
  - iv) commissions systems
  - v) communication and mentoring
- 6. Review process to perform water supply installation for the Sprinkler Fitter trade as identified in the RSOS.
  - i) underground water supplies
  - ii) fire pump units
  - iii) fire department connections
  - iv) private water supply systems
- 7. Review process to perform piping installation for the Sprinkler Fitter trade as identified in the RSOS.
  - i) prepares pipe, tube and fittings
  - ii) installs pipe, tube and fittings
  - iii) installs piping components
- 8. Review process to perform installations and layout of fire protection systems and devices for the Sprinkler Fitter trade as identified in the RSOS.
  - i) installs water-based systems
  - ii) installs specialty fire suppression systems
  - iii) installs detection devices
  - iv) installs signal-initiating devices
- 9. Review process to inspect, test and maintain (ITM) fire protection systems for the Sprinkler Fitter trade as identified in the RSOS.
  - i) maintains and repairs fire protection systems
  - ii) inspects and tests fire protection systems

#### Feedback and Revisions

This AACS will be amended periodically; comments or suggestions for improvements should be directed to:

#### **New Brunswick:**

Apprenticeship and Occupational Certification Post-Secondary Education, Training and Labour 470 York St., Rm. 110, PO Box 6000 Fredericton, NB E3B 5H1

Tel: 506-453-2260

Toll Free in NB: 1-855-453-2260

www.gnb.ca

#### Prince Edward Island:

Apprenticeship, Training and Certification Workforce and Advanced Learning 176 Great George St., PO Box 2000 Charlottetown, PE C1A 7N8

Tel: 902-368-4460

www.apprenticeship.pe.ca

#### Newfoundland and Labrador:

Apprenticeship and Trades Certification Advanced Education, Skills and Labour Confederation Building, West Block Prince Philip Dr., PO Box 8700 St. John's, NL A1B 4J6

Toll Free: 877-771-3737 www.aes.gov.nl.ca/app

#### **Nova Scotia:**

Nova Scotia Apprenticeship Agency 1256 Barrington Street, 3<sup>rd</sup> Floor PO Box 578

Halifax, NS B3J 2S9 Tel: 902-424-5651

Toll Free in NS: 1-800-494-5651 www.nsapprenticeship.ca

Any comments or suggestions received will be reviewed and considered to determine the course of action required. If the changes are deemed to be minor, they will be held for implementation during the next review cycle. If immediate change is deemed appropriate and approved by the Atlantic Trade Advisory Committee, it will result in a revision to this version of the AACS and will be detailed in the following section.

## **Version Changes**
