After receiving the vaccine, you will be monitored for at least 15 minutes to ensure you are feeling well.

Vaccine side effects can develop in the day or two after receiving the vaccine and will go away on their own. Some side effects may be more noticeable following the second dose of vaccine. The most common side effects include:

- Pain, tenderness, and swelling at the injection site (a cool, damp cloth or wrapped ice pack may help relieve any discomfort).
- Tiredness, headache, muscle pain, joint pain, nausea, vomiting, diarrhea, chills or fever (acetaminophen or ibuprofen may help with pain and fever).
- Enlarged lymph nodes (swollen glands) that last for several days.
- Dizziness, decreased appetite, excessive sweating, itchy skin or rash.

Serious side effects are rare but can include:

- Hives (bumps on the skin that are often very itchy)
- Swelling of the face, tongue or throat
- Difficulty breathing

Serious side effects after vaccination should be reported by calling: \_\_\_\_\_. This number is for reporting adverse events and not for medical advice. The Healthline can be reached at 811 if you have medical questions.

Things to remember:

- Receiving the second dose of the vaccine will ensure long term protection from COVID-19.
- Continue to follow the public health measures, wearing a mask, staying at least 2 metres from others and limiting social contacts.
- Wait 28 days after a dose of COVID-19 vaccine before receiving any other vaccines.
- Pregnancy should be avoided for at least 28 days after a dose of the vaccine.
- Bring your immunization record with you for the second dose and report any side effects you experienced after the first dose.
- Keep this sheet or other immunization record in a safe place. You can also download the [CANImmunize](#) app to keep track of this and other vaccines.
