# Electrical Bulletin

## Information for Electrical Contractors

**Information contained in this bulletin does not negate the responsibility of Electrical Contractors, and others, to comply with the requirements of the Canadian Electrical Code, the *Public Safety Act*, the *Electrical Regulations* and the supply authority.**

### **RE: Expiration of Electrical Permits**

Please be aware that as of July 01, 2018 there will be no further written notifications coming from Service NL to the Electrical Contractors making contractors aware of expired electrical permits. All electrical permits must be made “Final” as per Part IV-Inspection and Certification of the *Electrical Regulations*.

It is the responsibility of electrical contractors to ensure that all documents are filed with Service NL to allow ample time to “Finalize” the inspection process. As electrical contractors, you are aware that once an electrical permit has been issued, the liability of that electrical installation remains with you until the electrical permit has been closed/Final.

All electrical permits that have expired are required to be extended before any new electrical installation and repair permits will be issued. The cost associated with the expired permits would be as per the fee stated on the “Application for Electrical Permit”.

Repeated occurrences of expired permits will result in the suspension or cancellation of the Electrical Contractor’s Certificate.
