# Executive Summary

The 2022-2023 Monitoring and Maintenance Program has been conducted by Englobe Corp. (Englobe) at the property identified as the Come By Chance Hazardous Waste Landfill located near the intersection of Main Road and Refinery Road in Come By Chance, Newfoundland and Labrador (NL) (herein referred to as ‘the site’). The purpose of the work was to conduct one groundwater and surface water sampling event at the site, conduct inspection of the groundwater monitor wells, groundwater drainage system and the landfill cover, to carry out maintenance activities such as vegetation control, if required, as well as to conduct leachate sampling and pumping of the leachate collection system.

The field component of the monitoring program was conducted on multiple visits between December 21, 2022, and April 6, 2023, and included groundwater, surface and leachate sampling, site inspections and leachate collection system pumping and disposal.

Analytical results for petroleum hydrocarbons (PHCs), metals (total and dissolved), polycyclic aromatic hydrocarbons (PAHs), volatile organic compounds (VOCs), polychlorinated biphenyls (PCBs) and general chemistry parameters identified in samples collected from groundwater and surface water were compared to the 2021 Atlantic RBCA Version 4 Ecological Tier I Environmental Quality Standards (EQSs) for a commercial property with coarse-grained soil and a non-potable groundwater supply.

Analytical results for PHC, PAHs, VOCs, PCBs, general chemistry parameters and acute lethality identified in samples collected from the leachate collection chambers were compared to the 2021 Atlantic RBCA Version 4 Ecological Tier I EQS and the Newfoundland and Labrador Regulation 65/03, Environmental Control Water and Sewage Regulations (2003) under the Water Resources Act (O.C. 2003-231), Schedule A (discharge into a body of water).

The results of the 2022/2023 Maintenance and Monitoring Program are summarized as follows:

- Six existing monitor wells were located and sampled including MW93-1, MW93-1A, MW93-2, MW-932A, MW10-1 and MW10-1A, two surface water locations were sampled including SURF-UP and SURF-DOWN and two leachate samples were collected from each of the liner collection systems (PLCS and SLCS);
- The depths to groundwater in the monitor wells ranged from 0.99 mbgs in monitor well MW10-01 to 3.01 mbgs in MW93-1A on December 21, 2022 and January 4, 2023;
- Measurable free liquid phase petroleum hydrocarbons were not observed in groundwater in any of the monitor wells during the 2022/2023 maintenance and monitoring program;
- Concentrations of petroleum hydrocarbons, PAHs, VOCs and PCBs in groundwater samples collected from monitor wells MW93-1, MW93-1A, MW93-2, MW-932A, MW10-1 and MW10-1A satisfied the applicable Ecological Health Tier I EQSs;
- Concentrations of aluminum, cadmium, iron, manganese, molybdenum, silicon and zinc in some or all of the groundwater monitor wells exceeded the applicable Ecological Health Tier I EQSs. All other metal parameters satisfy applicable Ecological Health Tier I EQS;
- Concentrations of ammonia as N exceeded the applicable Ecological Health Tier I EQSs in 4 of the 6 groundwater samples collected the on-site monitor wells;
- Concentrations of petroleum hydrocarbons, PAHs, VOCs and PCBs in surface water samples collected from the unnamed brook located southeast of the landfill satisfied the applicable Ecological Health RBCA Tier I EQSs;

- Concentrations of aluminum and iron in surface water samples collected from the unnamed brook located southeast of the landfill exceeded the applicable Ecological Health RBCA Tier I EQSs. All other metal parameters satisfy applicable Ecological Health Tier I EQS;
- pH in one of the surface water samples (i.e., SURF-DOWN) collected from the unnamed brook located to the southeast of the landfill was reported to be outside of the acceptable range for pH as per the Ecological Health Tier I EQS;
- Concentrations of dissolved and total iron in one of the leachate samples (i.e., SLCS) collected from the liner containment chambers was reported to exceed the NL Regulation 65/03, ECWSR (2003) under the Water Resources Act (O.C. 2003-231), Schedule A (discharge into a body of water). Based on this reported exceedance Englobe recommended pumping of the leachate for offsite disposal;
- Between April 5 and 6, 2023, 50,000 L of leachate was pumped from the PLCS and the SLCS containment chambers by Pardy's Waste Management under the supervision of Englobe personnel;
- An inspection of the groundwater drainage system clean outs indicated that only three of the four clean-outs were located (i.e., CO1 to CO3). Where located, the clean-outs appear to be in good condition; and,
- Englobe could not access the adjacent property to inspect the outfall as it is a fenced private property; however, based on a visual assessment of the general area from the outside of the fenced area, the outfall could not be located.

Based on the available environmental data, no unacceptable risks to ecological receptors are anticipated at the site under current site conditions.

However, some considerations with respect to future operations of the site are outlined below:

- Continue to conduct annual groundwater, surface water and leachate monitoring and sampling in 2023/2024 to confirm groundwater, surface water and leachate quality at the site and down-gradient of the site. Conduct a trend analysis of the historical data including the additional monitoring;
- Complete a full assessment of the groundwater drainage system to determine if the system is still functioning as designed with emphasis on locating CO4 and the outfall on the adjacent property; and,
- Consideration should be given to placement of GW monitor wells downgradient of the landfill to aid in monitoring the conditions of the offsite groundwater conditions downgradient from the landfill.

# 1 Introduction

The 2022-2023 Monitoring and Maintenance Program has been conducted by Englobe Corp. (Englobe) at the property identified as the Come By Chance Hazardous Waste Landfill located near the intersection of Main Road and Refinery Road in Come By Chance, Newfoundland and Labrador (NL) (herein referred to as the ‘site’). The purpose of the work was to conduct one groundwater and surface water sampling event at the site, conduct inspection of the groundwater monitor wells, groundwater drainage system and the landfill cover, to carry out maintenance activities such as vegetation control, if required, as well as to conduct leachate sampling and pumping of the leachate collection system.

# 2 Background

## 2.1 Subject Property Description

The site is located near the intersection of Refinery Road and Main Road, approximately 2.5 km west of the Trans-Canada Highway and approximately 4 km south of the Town of Come By Chance, NL. The site has an approximate area of 2.0 hectares and is located in an industrial zoned property within the municipality of Come By Chance. A general Site Location Map, Figure 2.1, indicates the site's approximate extent for this investigation.

Figure 2-1 - Site Location Map - Intersection of Refinery Road and Main Road, Come By Chance, NL

Image source: Land Use Atlas, 2022.

Based on the information provided within the request for proposals (RFP) the landfill was constructed between 1994 and 1996 to facilitate the clean-up of hazardous waste associated with the original operators of the Come By Chance Oil Refinery and is filled with industrial waste and contaminated soil. The landfill was capped by the end of 1996.

From the review of previous site reports Englobe understands that four monitor wells were installed around the perimeter of the site (MW93-2, MW93-2A, MW10-1 and MW10-1A) to monitor potential leachate impacts in groundwater and two monitor wells (MW93-1 and MW93-1A) were installed upgradient of the site to monitor background analyte concentrations. Leachate containment is achieved through the use of a liner system consisting of independent primary and secondary liner collection systems (PLCS and SLCS, respectively) as well as a groundwater drainage system (GWDS) to manage excess fluid and provide a means for leachate discharge.

Indications that the landfill cap and primary liner appeared to be minimizing the infiltration of precipitation into the landfill were reported during monitoring events conducted between 2004 and 2007.

However, a historical monitoring report, noted that large volumes of leachate identified in the SLCS is an indication that groundwater may be entering the SLCS via perforations in the liner. The report further noted that the groundwater levels identified north of the landfill appear to be higher than the base of the SLCS at various times throughout the year. As a result, in 2009, a GWDS, consisting of a french drain was installed along the north and east sides of the landfill which was connected to a storm drain located along the east side of the landfill.

Surface water sampling was intended to characterize leachate from the site's leachate containment system and assess potential leachate infiltration into the nearby surface water by sampling a stream directly downgradient. Background analyte concentrations of the surface water was established by sampling at an upgradient location, which is located southeast of the landfill fenced area.

## 2.2 Geology, Hydrology and Hydrogeology

The following information has been obtained from available provincial mapping:

**Surficial deposits:** Based on our review of publicly available surficial geological maps and our previous experience from other investigations near this site, the site's surficial geology comprises of a mix of thick fluvial deposits of silt, clay to boulder and thin placed till deposits.

**Bedrock:** Based on publicly available bedrock mapping of the area (A.F. King, 1988), bedrock at the site is mapped as consisting of sandstone and shale turbidites of the Connecting Point Group and Conception Group.

**Hydrogeology:** Groundwater flow in the area is expected to vary, but to be generally to the west / northwest in the direction of Placentia Bay located approximately 270 m from the western boundary line of the site.

## 2.3 Previous Environmental Reports

Ten previous environmental reports prepared for the subject property were provided by ECC within the RFP and reviewed as part of the assessment.

- *Come By Chance Secure Landfill Groundwater Drainage System.* Prepared by AMEC Earth and Environmental, dated March 2009 (AMEC Reference No. TF8112721);
- *Annual Summary Report. 2010/2011 Monitoring and Maintenance Program Come By Chance Secure Landfill, Come By Chance, Newfoundland and Labrador.* Prepared by CRA, dated March 2011 (Ref. No. 056680 (3));

- *2011/2012 Monitoring and Maintenance Program Come By Chance Secure Landfill, Come By Chance, Newfoundland and Labrador.* Prepared by CBCL Limited, dated June 21, 2012 (Ref. No. 113080.00);
- *Come By Chance Secure Landfill, Operation, Maintenance and Monitoring (OMM) Manual,* dated June 2012;
- *2012/2013 Monitoring and Maintenance Program Come By Chance Secure Landfill, Come By Chance, Newfoundland and Labrador.* Prepared by CRA, dated May 2013 (Ref. No. 056680 (6));
- *2013/2014 Monitoring and Maintenance Program Come By Chance Secure Landfill, Come By Chance, Newfoundland and Labrador.* Prepared by CRA, dated November 2013 (Ref. No. 084308 (3));
- *2014/2015 Monitoring and Maintenance Program Come By Chance Secure Landfill, Come By Chance, Newfoundland and Labrador.* Prepared by CRA, dated February 2015 (Ref. No. 084308 (6));
- *2015/2016 Monitoring and Maintenance Program Come By Chance Secure Landfill, Come By Chance, NL.* Prepared by Fracflow Consultants Inc., dated May 2016 (FFC File 3073C);
- *2017/2018 Monitoring Program Come By Chance Secure Landfill, Come By Chance, Newfoundland and Labrador.* Prepared by CRA, dated June 2018 (084308 / Report No 9);
- *2021/2022 Monitoring and Maintenance Program Come By Chance Hazardous Waste Landfill, Come By Chance, NL.* Prepared by Strum Consulting, dated March 31, 2022 (Project # 21-8635); and,
- *Come By Chance Secure Landfill, Operations, Maintenance and Monitoring (OMM) Manual.* Prepared for Newfoundland and Labrador Department of Environment and Climate Change Pollution Prevention Division, dated March 2022.

## 3 Scope of Work

The scope of work for the Monitoring and Maintenance Program is as follows:

- Sampling and analysis (modified total petroleum hydrocarbons (TPH)/benzene, toluene, exybenzene and xylenes (BTEX), polycyclic aromatic hydrocarbons (PAHs), polychlorinated biphenyls (PCBs), general chemistry, volatile organic compounds (VOCs), and dissolved metals (including mercury)) of groundwater from six existing monitor wells;
- Sampling and analysis (TPH/BTEX, PAHs, PCBs, general chemistry, VOCs, and total metals (including mercury, trivalent and hexavalent chromium ( $\text{Cr}^{3+}$  and  $\text{Cr}^{6+}$ )) of two surface water locations (SURFACE-UP and SURFACE-DOWN);
- Sampling and analysis (TPH/BTEX, PAHs, PCBs, general chemistry, VOCs, dissolved and total metals (including mercury)), toxicity (rainbow trout) as well as phenols, cyanide, sulfides and any other parameters as required to ensure compliance with Schedule A of the Environmental Control Water and Sewage Regulations of two leachate samples (PLCS and SLCS);
- If the leachate complies with the criteria, results shall be reviewed by NLECC for approval to discharge to the drainage ditch downgradient of the landfill. If the leachate does not comply and exceeds the background levels (i.e., surface water location SURFACE-UP and monitor well MW93-1A), then the leachate shall not be disposed directly into a water body. The leachate may be collected and disposed of by an approved liquid waste management company;
- Inspection of the landfill cover, elevation control, and groundwater drainage system;
- An analysis of analytical data and discussion of groundwater to determine future monitoring requirements including assessment of the requirement for additional monitor wells;

- Complete a comprehensive review on the overall integrity of the double liner system of the landfill, the current groundwater monitoring plan and provide a path forward on how to address the outstanding, long-term maintenance issues of the site, such as the valves being stuck in the open position; and,
- Conduct vegetation control as specified in the Come By Chance Secure Landfill Operations, Maintenance and Monitoring (OMM) Manual.

# 4 Approach & Methodology

## 4.1 Groundwater Sampling

Englobe personnel were on-site on December 21, 2022 and January 4, 2023, to collect groundwater samples from six monitoring wells, including MW10-01, MW10-01A, MW93-1, MW93-1A, MW93-2 and MW93-2A. Prior to sampling, static groundwater levels were measured at each monitoring well using a Solinst interface probe and were verified for the presence of free phase petroleum product. Each well was developed by purging a minimum of three well casing volumes using dedicated bailers. After allowing sufficient time for groundwater recovery, groundwater samples were collected from the monitor wells using dedicated bailers and placed in laboratory supplied bottles and vials (with preservative as necessary).

Samples were then placed in a secure ice-packed cooler until delivery to the laboratory. Groundwater samples were submitted to ALS Laboratories in Dartmouth, NS for analysis of petroleum hydrocarbons (PHCs), metals (dissolved), PAHs, VOCs, PCBs and general chemistry. ALS is certified by the Standards Council of Canada (SCC). Where applicable, analyses were performed in accordance with the protocols stipulated in the Atlantic RBCA Guidelines for Laboratories, Version 3.1, May 2016.

One field duplicate sample at monitor well MW10-01 was also collected and submitted for PHCs, metals (dissolved), PAHs, VOCs, PCBs and general chemistry.

Information from the groundwater sampling program is presented in Tables 1 to 6. The locations of all monitor wells are shown on Figure 1 of Appendix A.

# 5 Assessment Standards

The site is occupied by a hazardous waste landfill and is identified on the Newfoundland and Labrador land use map as an industrial property. Site soils are coarse-grained and groundwater resources are not used as a potable water source and therefore considered to be non-potable.

Analytical PHC, PAH, VOC, PCB, general chemistry parameters and metal results in groundwater have been compared to:

- 2021 Atlantic RBCA Human Health-Based Tier I Environmental Quality Standards (EQSs) for a commercial property with non-potable groundwater and coarse-grained soil; and,
- 2021 Atlantic RBCA Ecological Tier I EQSs for groundwater based on a >10 m distance from a surface water body with discharge to a fresh water and/or marine water body.

Analytical PHC, PAH, VOC, PCB, general chemistry parameters and metal results in surface water have been compared to:

- 2021 Atlantic RBCA Ecological Tier I EQSs for Surface Water with discharge to fresh water and/or marine water.

Analytical PHC, PAH, VOC, PCB, general chemistry parameters, metal and lethality results in leachate have been compared to:

- Newfoundland and Labrador (NL) Regulation 65/03, Environmental Control Water and Sewage Regulations (ECWSR) (2003) under the Water Resources Act (O.C. 2003-231), Schedule A (discharge into a body of water); and,
- 2021 Atlantic RBCA Human Health-Based Tier I EQSs for Surface Water with discharge to fresh water and/or marine water.

# 6 Results

## 6.1 Hydrogeologic Assessment

On, December 21, 2022 and January 4, 2023, Englobe personnel measured the groundwater depth in all monitoring wells located at the site. Table 6-1 presents the results of the groundwater survey. The groundwater depths ranged from 0.245 to 1.739 mbgs. Based on topography the groundwater flow direction is expected to be to the east/southeast.

**Table 6-1- Summary of Groundwater Depths and Elevations**

Location	Depth to Groundwater from Top of Casing (mbTOC)	Stick Up	Depth to Groundwater (mbgs)	Top of Casing Elevation (m)	Ground Surface Elevation (m)	Groundwater Elevation (m)
MW10-01	2.585	0.846	1.739	16.836	15.946	14.207
MW10-01A	2.586	0.854	1.732	16.884	15.959	14.227
MW93-1	1.760	1.100	0.66	17.78	16.427	15.767
MW93-1A	2.025	1.400	0.625	17.459	16.312	15.687
MW93-2	1.345	1.100	0.245	15.409	14.005	13.76
MW93-2A	1.685	1.100	0.585	14.156	14.156	13.571

## 6.2 Samples Submitted

In total ten water samples including six groundwater plus one field duplicate, two surface water samples and two leachate samples were submitted for chemical analysis.

**Details of the analysis performed on each sample can be found in**

Table 6-2. The locations of the wells and surface water sample locations are shown on Figure 1, Appendix A.

**Table 6-2 - Summary of Samples Submitted**

Sample ID	Location(s)	Analysis
MW10-01	MW10-01	PHCs, Metals (dissolved), PAHs, PCBs, VOCs, and General Chemistry.
MW10-01A	MW10-01A	PHCs, Metals (dissolved), PAHs, PCBs, VOCs, and General Chemistry.
MW10-01(DUP)	MW10-01	PHCs, Metals (dissolved), PAHs, PCBs, VOCs, and General Chemistry.
MW93-1	MW93-1	PHCs, Metals (dissolved), PAHs, PCBs, VOCs, and General Chemistry.
MW93-1A	MW93-1A	PHCs, Metals (dissolved), PAHs, PCBs, VOCs, and General Chemistry.
MW93-2	MW93-2	PHCs, Metals (dissolved), PAHs, PCBs, VOCs, and General Chemistry.
MW93-2A	MW93-2A	PHCs, Metals (dissolved), PAHs, PCBs, VOCs, and General Chemistry.
SURF-UP	Upstream Surface Water Body	PHCs, Metals (total), PAHs, PCBs, VOCs, and General Chemistry.
SURF-DOWN	Downstream Surface Water Body	PHCs, Metals (total), PAHs, PCBs, VOCs, and General Chemistry.
PLCS	PLCS Catchment	PHCs, Metals (dissolved/total), PAHs, PCBs, VOCs, General Chemistry and Lethality.
SLCS	SLCS Catchment	PHCs, Metals (dissolved/total), PAHs, PCBs, VOCs, General Chemistry and Lethality.

Laboratory analytical results are included in Tables 1 to 20 of Appendix C and discussed below. The laboratory certificates are included in Appendix D.

## **6.3 Analytical Results**

Laboratory analytical results obtained during the 2022/2023 Maintenance and Monitoring Program are presented in Tables 1 to 20 in Appendix C. Groundwater, surface water and leachate results are presented in conjunction with the applicable Atlantic RBCA Human Health-Based or Ecological Tier I EQSs and the NL Regulation 65/03, ECWSRs (2003) under the Water Resources Act (O.C. 2003-231), Schedule A (discharge into a body of water). Copies of the laboratory certificates of analysis are provided in Appendix D.

### **6.3.1 Groundwater**

#### **6.3.1.1 Petroleum Hydrocarbons**

Six groundwater samples plus one field duplicate sample were submitted for PHC analysis. Laboratory analytical results are included in Table 1 of Appendix C. The laboratory certificates are included in Appendix D.

All of the groundwater samples submitted plus the field duplicate reported PHC concentrations below the laboratory detection limits.

#### **6.3.1.2 Metals (dissolved)**

Six groundwater samples plus one field duplicate sample were submitted for metals (dissolved) analysis. Laboratory analytical results are included in Table 2 of Appendix C. The laboratory certificates are included in Appendix D.

The following exceedances were noted:

- Aluminum in monitor well MW93-2;
- Cadmium in monitor well MW93-2;
- Iron in monitor well MW10-01;
- Manganese in monitor well MW93-2;
- Molybdenum in monitor wells MW10-01, MW10-01a, MW93-1, MW93-1A, and M93-2a;
- Silicon in monitor wells MW10-01, MW10-01A, MW93-1, MW93-1A, MW93-2 and MW93-2A; and,
- Zinc in monitor well MW93-2.

All other metal parameters satisfy applicable 2021 Ecological Based Tier I EQSs.

#### **6.3.1.3 PAHs**

Six groundwater samples plus one field duplicate sample were submitted for PAH analysis. Laboratory analytical results are included in Table 3 of Appendix C. The laboratory certificates are included in Appendix D.

The PAH parameters reported ranged from below detectable limits to trace levels, thus, satisfying the applicable Human Health-Based and Ecological Tier I EQSs.

#### **6.3.1.4 VOCs**

Six groundwater samples plus one field duplicate sample were submitted for VOC analysis. Laboratory analytical results are included in Table 4 of Appendix C. The laboratory certificates are included in Appendix D.

The VOC parameters reported ranged from below detectable limits to trace levels, thus, satisfying the applicable Human Health-Based and Ecological Tier I EQSs.

### **6.3.1.5 PCBs**

Six groundwater samples plus one field duplicate sample were submitted for PCB analysis. Laboratory analytical results are included in Table 5 of Appendix C. The laboratory certificates are included in Appendix D.

The PCB parameters reported were below detectable limits, however, the applicable Ecological Tier I EQS for discharge to fresh water guideline (0.01 µg/L) is lower than the RDL (0.06 µg/L).

### **6.3.1.6 General Chemistry**

Six groundwater samples plus one field duplicate sample were submitted for general chemistry analysis. Laboratory analytical results are included in Table 6 of Appendix C. The laboratory certificates are included in Appendix D.

The general chemistry parameters reported ranged from below detectable limits to trace levels, thus, satisfying the applicable Ecological Tier I EQSs with the exception of ammonia as N which exceeded the applicable Ecological Tier I EQSs in four of the six groundwater samples collected from the on-site monitor wells.

## **6.3.2 Surface Water**

### **6.3.2.1 Petroleum Hydrocarbons**

Two surface water samples plus one field duplicate were submitted for PHC analysis. Laboratory analytical results are included in Table 7 of Appendix C. The laboratory certificates are included in Appendix D.

All of the surface water samples submitted reported PHC concentrations below the laboratory detection limits.

### **6.3.2.2 Metals (total)**

Six groundwater samples plus one field duplicate sample were submitted for metals (total) analysis. Laboratory analytical results are included in Table 3 of Appendix C. The laboratory certificates are included in Appendix D.

- Aluminum in surface water samples SURF-UP and SURF-DOWN plus the field duplicate; and,
- Iron in surface water samples SURF-UP and SURF-DOWN plus the field duplicate.

All other metal parameters satisfy applicable Ecological Based Tier I EQS for surface water.

### **6.3.2.3 PAHs**

Two surface water samples plus one field duplicate were submitted for PAH analysis. Laboratory analytical results are included in Table 9 of Appendix C. The laboratory certificates are included in Appendix D.

The PAH parameters reported ranged from below detectable limits, thus, satisfying the applicable Ecological Tier I EQSs.

### **6.3.2.4 VOCs**

Two surface water samples plus one field duplicate were submitted for VOC analysis. Laboratory analytical results are included in Table 10 of Appendix C. The laboratory certificates are included in Appendix D.

The VOC parameters reported ranged from below detectable limits, thus, satisfying the applicable Ecological Tier I EQSs.

### **6.3.2.5 PCBs**

Two surface water samples plus one field duplicate were submitted for PCB analysis. Laboratory analytical results are included in Table 11 of Appendix C. The laboratory certificates are included in Appendix D.

The PCB parameters reported below detectable limits, however, the applicable Ecological Tier I EQS for discharge to fresh water guideline (0.001 µg/L) is lower than the RDL (0.06 µg/L).

### **6.3.2.6 General Chemistry**

Two surface water samples plus one field duplicate were submitted for general chemistry analysis. Laboratory analytical results are included in Table 12 of Appendix C. The laboratory certificates are included in Appendix D.

The general chemistry parameters reported ranged from below detectable limits to trace levels, however, satisfying the applicable Ecological Tier I EQSs.

A sample collected from the downstream location (identified as SURF-DOWN) reported a pH concentration of 6.49 which is considered outside of the acceptable range identified in the Ecological Tier I EQS guideline.

## **6.3.3 Leachate**

### **6.3.3.1 Petroleum Hydrocarbons**

Two leachate water samples were submitted for PHC analysis. Laboratory analytical results are included in Table 13 of Appendix C. The laboratory certificates are included in Appendix D.

Both leachate samples submitted reported PHC concentrations that ranged from below the laboratory detection limits to trace levels, thus satisfying the applicable Ecological Tier I EQSs and the NL ECWSRs.

### **6.3.3.2 Metals (total/dissolved)**

Six groundwater samples plus one field duplicate sample were submitted for metal (total/dissolved) analysis. Laboratory analytical results are included in Table 14 and 15 of Appendix C. The laboratory certificates are included in Appendix D.

Total Metal Exceedances of Tier I EQS:

- Aluminum in leachate sample PLCS;
- Boron in leachate sample SLCS;
- Copper in leachate samples PLCS;
- Iron in leachate samples PLCS and SLCS; and,
- Manganese in leachate sample SLCS.

#### Dissolved Metal Exceedances of Tier I EQS:

- Aluminum in leachate samples PLCS and SLCS ;
- Copper in leachate samples PLCS;
- Iron in leachate samples PLCS and SLCS;
- Manganese in leachate sample SLCS; and,
- Sulfur in leachate samples PLCS and SLCS.

All other metal parameters satisfy applicable 2021 Atlantic RBCA Ecological Tier I EQS.

Total and dissolved iron was reported to exceed the NL ECWSRs in the SLCS.

#### 6.3.3.3 PAHs

Two leachate water samples were submitted for PAH analysis. Laboratory analytical results are included in Table 16 of Appendix C. The laboratory certificates are included in Appendix D.

The PAH parameters reported ranged from below detectable limits to concentrations which exceeded the applicable Ecological Tier I EQSs. There are no guidance criteria for PAH parameters provided in the NL ECWSRs. The following parameters exceeded the applicable guidelines:

- Benzo(a)pyrene and Fluoranthene in SLCS; and,
- Pyrene in SLCS.

#### 6.3.3.4 VOCs

Two leachate water samples were submitted for VOC analysis. Laboratory analytical results are included in Table 17 of Appendix C. The laboratory certificates are included in Appendix D.

The VOC parameters reported ranged from below detectable limits, thus, satisfying the applicable Ecological Tier I EQSs. There are no guidance criteria for VOC parameters provided in the NL ECWSRs.

#### 6.3.3.5 PCBs

Two leachate water samples were submitted for PCB analysis. Laboratory analytical results are included in Table 18 of Appendix C. The laboratory certificates are included in Appendix D.

The PCB parameters reported below detectable limits, however, the applicable Ecological Tier I EQS for discharge to fresh water guideline (0.001 µg/L) is lower than the RDL (0.06 µg/L). There are no guidance criteria for PCBs provided in the NL ECWSRs.

#### 6.3.3.6 General Chemistry

Two leachate water samples were submitted for general chemistry analysis. Laboratory analytical results are included in Table 19 of Appendix C. The laboratory certificates are included in Appendix D.

The general chemistry parameters reported ranged from below detectable limits to trace levels, thus, satisfying the applicable Ecological Tier I EQSs and the NL ECWSRs.

#### 6.3.3.7 Lethality Testing

Two leachate water samples were submitted for lethality analysis. Laboratory analytical results are included in Table 20 of Appendix C. The laboratory certificates are included in Appendix D.

The leachate samples collected passed the acute lethality testing.

## 6.4 Quality Assurance/Quality Control

Englobe conducted the environmental sampling following standard operating procedures, including job procedures and safe work practices. The sampling was conducted in accordance with all pertinent acts, regulations, codes, guidelines, and standard practices.

All groundwater, surface water and leachate samples were logged by Englobe personnel and submitted under chain of custody to ALS Canada. ALS Canada conducts their own internal QA/QC programs consistent with relevant standards and requirements for laboratory certification. The measured values and recoveries are compared to acceptable lower and upper limits. ALS's QA/QC results were reviewed by Englobe and were found to be within acceptable limits and details can be found on the lab certificates in Appendix D.

Based on the results of the QA/QC program, the analytical results are considered reliable and acceptable.

# 7 Maintenance Program

## 7.1 Leachate

Prior to discharging leachate from both liner collection chambers a review of the reported analytical data was conducted and compared to the NL Regulation 65/03, ECWSR (2003) under the Water Resources Act (O.C. 2003-231), Schedule A (discharge into a body of water). Once reviewed by Englobe, the analytical results from the leachate samples were submitted to the Department of Environment and Climate Change for approval prior to pumping.

Based on the analytical results, concentrations of PHCs, VOCs, general chemistry parameters and acute lethality were reported to be non-detect for the samples collected from each chamber. Various concentrations of PAHs and metals (total and dissolved) were detected in both of the samples; however, all detected parameters excluding iron satisfied the NL ECWSRs where applicable.

Concentrations of iron, both dissolved (17,700 µg/L) and total (22,100 µg/L), collected from the secondary liner containment system exceeded the NL ECWSRs of 10,000 µg/L; therefore, Englobe recommended pumping the leachate for disposal rather than discharging to the environment. Approval for the proposed pumping event was proved from the Department of Environment and Climate Change on April 4<sup>th</sup>, 2023.

On April 5 and 6, 2023, Englobe supervised the pumping of leachate conducted by Pardy's Waste Management. Approximately 50,000 L of leachate was pumped from the PLCS and the SLCS over a two-day period and disposal at Pardy's licensed treatment facility.

## 7.2 Inspection of Monitor Well

Englobe conducted an inspection of the monitor wells on multiple visits between December 21, 2022, and April 6, 2023, and noted that the monitor wells appear to be in good condition. Englobe noted that the dedicated bailers installed in the wells are showing signs of age and should be replaced during the next monitoring program.

## **7.3 Inspection of Groundwater Drainage System**

Englobe conducted a visual assessment of the groundwater drainage system located to the north and west of the landfill. Upon inspection, Englobe was able to locate and inspect clean-outs (CO) 1 through 3; however, CO4 was not able to be located during the current assessment. Based on Englobe inspection, CO1 to CO3 appear to be in good condition with no obvious signs of blockage observed. However, Englobe was not able to identify if the system was working or not, as visual inspection could not be conducted on the horizontal drainage line running alongside the landfill.

Inspection of the outfall was not possible during the assessment as access to the adjacent property was not possible as the area is now fenced private property. A visual inspection of the slope of the adjacent property was conducted alongside the chain-link fence; however, the outfall was not able to be located. In addition, there were no obvious signs of a water outfall along the adjacent property perimeter. Based on this fact, it is possible that the groundwater drainage system's outfall could be damaged or destroyed.

## **7.4 Vegetation Control**

An inspection of the vegetation height on the landfill cover was conducted by Englobe on December 21, 2022. Due to previous clearing, current vegetation is at an average height of 0.6 m. Englobe recommends that the height of vegetation continue to be monitored.

## **7.5 Landfill Cover Inspection**

A landfill cover inspection was conducted by Englobe on January 4, 2023. The following items were noted during the inspection:

- Evidence of erosion, meadow vole and/or large animal activity was not noted during the inspection;
- Slopes of the landfill were observed to be in good condition and covered with vegetation;
- No evidence of settlement was observed;
- The landfill vents (V1 and V2) were observed to be in good condition and free from obstruction; and,
- The outflow drainage pipe could not be located during the site visit.

## **7.6 Elevation Control Point Survey**

An elevation control point survey was conducted on April 6, 2023. Initial GPS co-ordinates for the four elevation control points locations were provided in historical reports available on the Department of Environment and Climate Change's website. The control point used for the survey was identified as 82G3044 on the Newfoundland and Labrador Geodetic Network database.

Table 7-1 presents the results of the elevation control survey. Based on the results of the current survey it appears that settling has occurred at the site since installation of the elevation control points.

**Table 7-1- Summary of Elevations Control Points**

Location	Original Elevation (m) Jul 16, 2012	2023 Survey (m)	Difference (m)
PLCS	15.960	15.944	0.016
SLCS	15.955	15.932	0.023
ECP1	20.439	20.435	0.004
ECP2	20.442	20.321	0.121
ECP3	20.935	20.902	0.033
ECP4	21.212	20.949	0.263

# 8 Discussion

Based on the results of the 2022-2023 monitoring sampling event, observations, information gathered, and historical laboratory analytical data obtained during previous sampling events completed at the site, the following environmental information has been used to determine the potential for trends. As guidance criteria has been updated since the initial analytical data was reviewed, a direct comparison of exceedances observed from data collected from 2009 to 2017 could not be made with the two recent programs completed since 2021. Historical analytical data prior to 2021 was compared to the MOE Guidelines for Full Depth Generic Site Condition Standards and the CCME CWQGs, while data collected during monitoring programs completed since 2021 has been compared to the Atlantic RBCA - User Guidance (Version 4.0, July 2021, updated July 2022) for groundwater and surface water. However, leachate has been compared to the NL Regulation 65/03, ECWSR (2003) under the Water Resources Act (O.C. 2003-231), Schedule A (discharge into a body of water) which has been guidance criteria since the initial monitoring program.

## 8.1.1 Groundwater

Concentrations of PHC, PAHs, VOCs and PCBs have reported to be non-detect or detected at concentrations which are below the applicable guidelines since the initial groundwater monitoring event conducted in 2009.

The historical 2009-2017, 2021 and 2022 groundwater quality results are consistent in terms of metals detected during some or all sampling events. Current concentrations of aluminum have been reported to exceed the applicable guidelines in one of the onsite monitor wells; however, although historical concentrations are reported to be within the same fluctuating range as the current assessment, no guidance criteria was identified within the MOE Guidelines for Full Depth Generic Site Condition Standards. Various other metals (i.e., Cobalt, Copper, Cadmium, Magnesium and Zinc) have reported exceedances of the applicable guidelines. No significant trends were identified due to the annual variability of the identified exceedances year to year; however, the following are noted:

- pH: pH has historically remained within the acceptable range with a slight decrease from 2021 to 2023;
- Cadmium: historical concentrations of cadmium have fluctuated with a decrease from 2021 to 2023;
- Molybdenum: molybdenum concentrations have historically remained consistent overall; however, all the historic and current concentrations are above Tier 1 EQS guidelines;
- Aluminum: aluminum concentration has historically been below applicable guidelines; however, a slight increase in concentration was observed from 2022 to 2023;

- Iron: a slight increase in the concentration of iron was observed from 2022 to 2023; and,
- Zinc: zinc concentrations have been historically within range; however, historic and current concentrations are above Tier 1 EQSs guidelines.

### **8.1.2 Surface Water**

Concentrations of PHC, PAHs, VOCs and PCBs have reported to be non-detect or detected at concentrations which are below the applicable guidelines since the initial surface water monitoring event conducted in 2009.

Based on historical surface water data, surface water quality at the upstream location (i.e., SURF-UP) and at the downstream location (i.e., SURF-DOWN) has remained consistent with the exception of some seasonal elevated concentrations of individual parameters.

The historical 2009-2017, 2021 and 2022 surface water quality results are consistent in terms of metals detected during some or all sampling events. Current and historical concentrations of aluminum have been reported to exceed the applicable guidelines. Various other metals have reported exceedances of the applicable guidelines. No significant trends were identified due to the annual variability of the identified exceedances year to year; however, the following are noted:

- Aluminum: aluminum concentrations have historically have been within range; however, the historic and current concentrations are above the Tier 1 EQSs;
- Cadmium: cadmium has shown a decrease from 2022 to 2023 in both the upgradient and the downgradient samples;
- Iron: iron concentrations has historically been within range; however, a slight decrease is observed from 2022 to 2023; and,
- pH: pH has historically shown to be trending down since the monitoring began in the late 2000s.

### **8.1.3 Leachate**

Concentrations of PHC, PAHs, VOCs and PCBs have reported to be non-detect or detected at concentrations which are below the applicable guidelines since the initial leachate monitoring event conducted in 2009.

The historical 2009-2017, 2021 and 2022 leachate quality results are consistent in terms of metals detected during some or all sampling events. Historical and current concentrations of various metals have been reported to exceed the applicable ecological guidelines in the leachate samples submitted. Concentrations of iron reported throughout various years of historical monitoring and within the two most current monitoring years have been reported to exceed the applicable guidelines for discharge to the environment (i.e., NL Regulation 65/03, ECWSR (2003) under the Water Resources Act (O.C. 2003-231), Schedule A (discharge into a body of water)). With the exception of iron which has regularly exceeded the ECWSR guidelines, no significant trends were identified due to the annual variability of the identified exceedances year to year; however, the following was noted:

- Nitrate as N: the concentration of nitrate as N indicated an increase in the PLCS in 2023;
- Iron: historical iron concentrations have fluctuated with a slight decrease observed from 2022 to 2023
- Aluminum: aluminum concentrations have historically been within range; however, these concentrations are above the Tier 1 EQSs
- Calculated TDS: historical results of calculated TDS have been within range; however, a significant increase in concentration was observed in 2023;

- Boron: boron concentrations have historically been within in range; and,
- pH: pH has historically remained within the acceptable range.

# 9 Conclusion and Recommendations

The results of the 2022/2023 Maintenance and Monitoring Program are summarized as follows:

- Six existing monitor wells were located and sampled including MW93-1, MW93-1A, MW93-2, MW-932A, MW10-1 and MW10-1A, two surface water locations were sampled including SURF-UP and SURF-DOWN and two leachate samples were collected from each of the liner collection systems (PLCS and SLCS);
- The depths to groundwater in the monitor wells ranged from 0.99 mbgs in monitor well MW10-01 to 3.01 mbgs in MW93-1A on December 21, 2022 and January 4, 2023;
- Measurable free liquid phase petroleum hydrocarbons were not observed in groundwater in any of the monitor wells during the 2022/2023 maintenance and monitoring program;
- Concentrations of petroleum hydrocarbons, PAHs, VOCs and PCBs in groundwater samples collected from monitor wells MW93-1, MW93-1A, MW93-2, MW-932A, MW10-1 and MW10-1A satisfied the applicable Ecological Health Tier I EQSs;
- Concentrations of aluminum, cadmium, iron, manganese, molybdenum, silicon and zinc in some or all of the groundwater monitor wells exceeded the applicable Ecological Health Tier I EQSs. All other metal parameters satisfy applicable Ecological Health Tier I EQS;
- Concentrations of ammonia as N exceeded the applicable Ecological Health Tier I EQSs in four of the six groundwater samples collected the on-site monitor wells;
- Concentrations of petroleum hydrocarbons, PAHs, VOCs and PCBs in surface water samples collected from the unnamed brook located southeast of the landfill satisfied the applicable Ecological Health RBCA Tier I EQSs;
- Concentrations of aluminum and iron in surface water samples collected from the unnamed brook located southeast of the landfill exceeded the applicable Ecological Health RBCA Tier I EQSs. All other metal parameters satisfy applicable Ecological Health Tier I EQS;
- pH in one of the surface water samples (i.e., SURF-DOWN) collected from the unnamed brook located to the southeast of the landfill was reported to be outside of the acceptable range for pH as per the Ecological Health Tier I EQS;
- Concentrations of dissolved and total iron in one of the leachate samples (i.e., SLCS) collected from the liner containment chambers was reported to exceed the NL Regulation 65/03, ECWSR (2003) under the Water Resources Act (O.C. 2003-231), Schedule A (discharge into a body of water). Based on this reported exceedance Englobe recommended pumping of the leachate for offsite disposal;
- Between April 5 and 6, 2023, 50,000 L of leachate was pumped from the PLCS and the SLCS containment chambers by Pardy's Waste Management under the supervision of Englobe personnel;
- An inspection of the groundwater drainage system clean outs indicated that only 3 of the 4 clean-outs were located (i.e., CO1 to CO3). Where located, the clean-outs appear to be in good condition; and,

- Englobe could not access the adjacent property to inspect the outfall as it is a fenced private property; however, based on a visual assessment of the general area from the outside of the fenced area, the outfall could not be located.

Based on the available environmental data, no unacceptable risks to ecological receptors are anticipated at the site under current site conditions.

However, some considerations with respect to future operations of the site are outlined below:

- Continue to conduct annual groundwater, surface water and leachate monitoring and sampling in 2023/2024 to confirm groundwater, surface water and leachate quality at the site and down-gradient of the site. Conduct a trend analysis of the historical data including the additional monitoring;
- Complete a full assessment of the groundwater drainage system to determine if the system is still functioning as designed with emphasis on locating CO4 and the outfall on the adjacent property; and,
- Consideration should be given to placement of GW monitor wells downgradient of the landfill to aid in monitoring the conditions of the offsite groundwater conditions downgradient from the landfill.

## 10 Report Use and Conditions

This report was prepared for the exclusive use of Government of Newfoundland and Labrador- Department of Environment and Climate Change, and is based on data and information obtained during a site visit by Englobe on the subject property; and is based solely upon the condition of the property on the date of such inspection, supplemented by information obtained and described herein.

The evaluation and conclusions contained in this report have been prepared in light of the expertise and experience of Englobe Corp. In evaluating the property, Englobe has relied in good faith upon representation and information furnished by individuals noted in the report with respect to operations and existing property conditions and the historic use of the property to the extent that they have not been contradicted by data obtained by other sources. Accordingly, Englobe accepts no responsibility for any deficiency or inaccuracy in this report as a result of omissions, misstatements or misrepresentations of the persons interviewed. In addition, Englobe will not accept liability for loss, injury, claim or damage arising from any use or reliance on this report as a result of misrepresentation or fraudulent information.

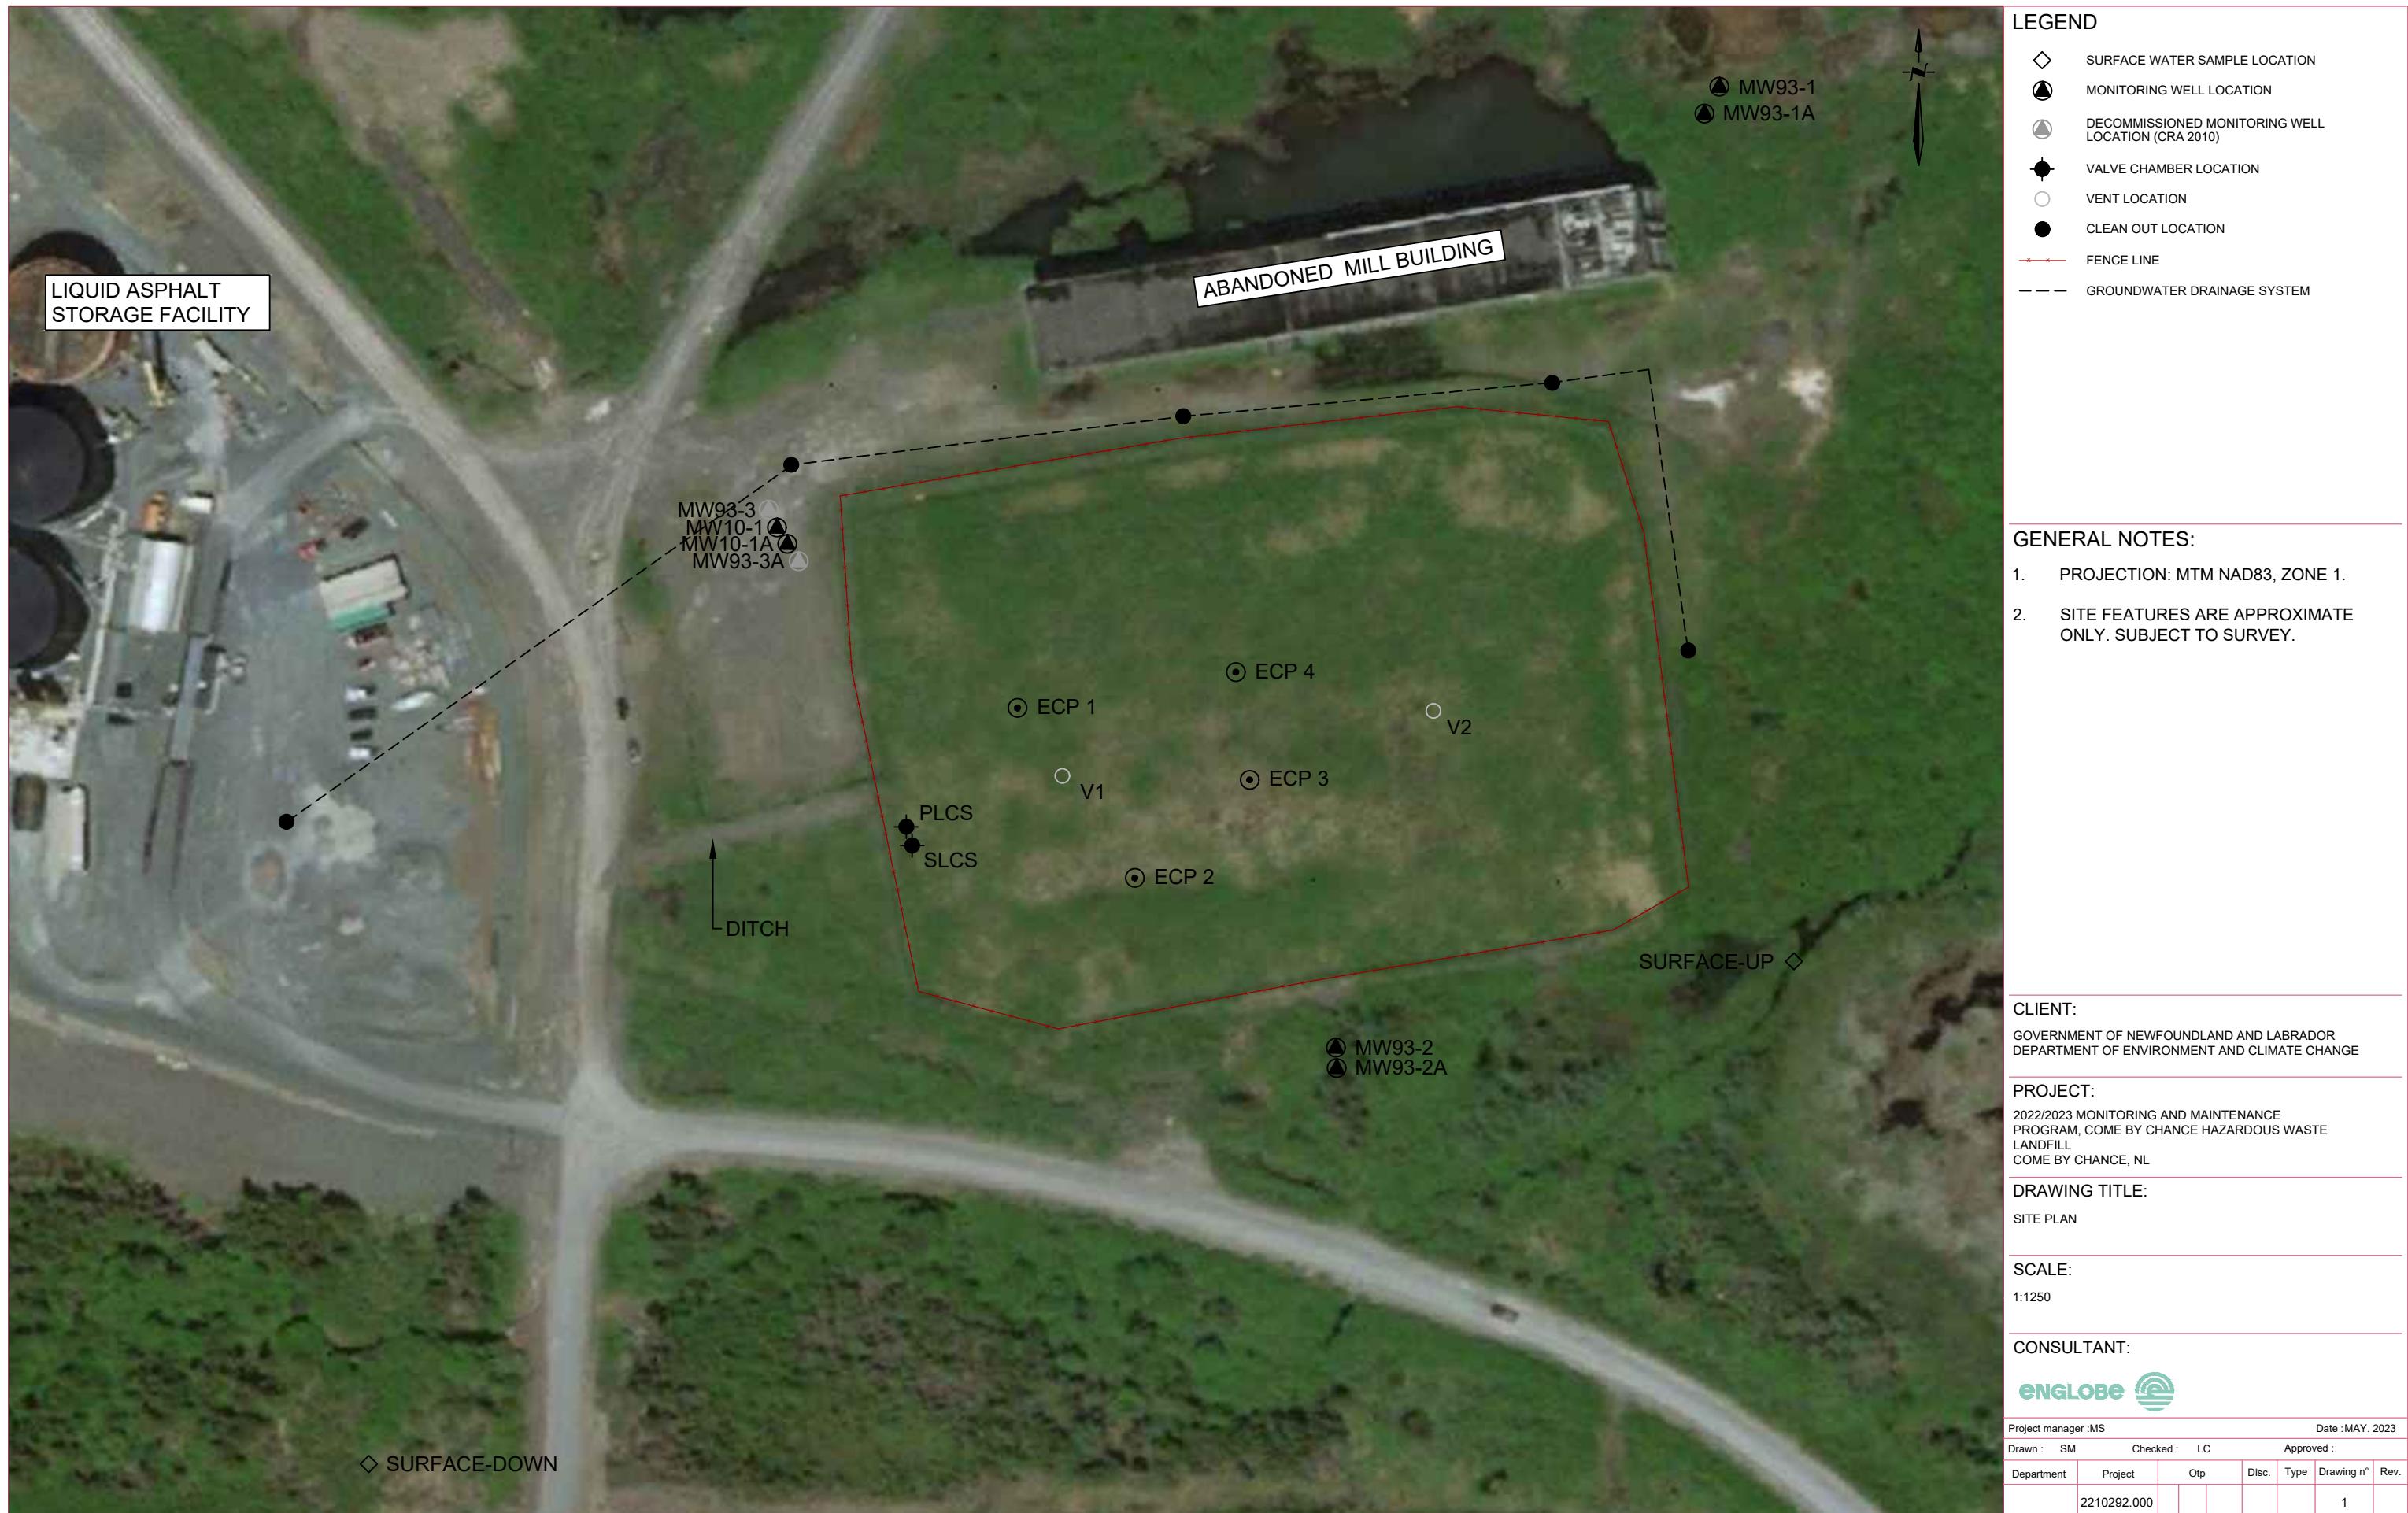

Environmental conditions are dynamic in nature and changing circumstances in the environment and in the use of the property can alter radically the conclusions and information contained herein.

## Notes:

1, 2 Atlantic RBCA Ecological Tier I EQSs for groundwater based on &gt;10m from a surface water body with discharge to a fresh water and/or marine water (July 2021, updated July 2022).

NG = For Tier I EQS, Health Canada AO and OG values are excluded from consideration, as such No Guideline (NG) is indicated.

- = No applicable guideline or parameter not defined.

Value Exceeds Fresh Water or Marine criteria reference below.

NG = For Tier I EQS, Health Canada AO and OG values are excluded from consideration, as such No Guideline (NG) is indicated.

- = No applicable guideline or parameter not defined.

No. of samples analysed	: 6		

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted. This document shall not be reproduced, except in full.

This Certificate of Analysis contains the following information:

- General Comments
- Analytical Results
- Guideline Comparison

Additional information pertinent to this report will be found in the following separate attachments: Quality Control Report, QC Interpretive report to assist with Quality Review and Sample Receipt Notification (SRN).

### Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is conducted in accordance with US FDA 21 CFR Part 11.

Signatories	Position	Laboratory Department
Andrea Armstrong	Department Manager - Air Quality and Volatiles	Organics, Waterloo, Ontario
Danielle Gravel	Supervisor - Semi-Volatile Instrumentation	Organics, Waterloo, Ontario
Greg Pokocky	Supervisor - Inorganic	Inorganics, Waterloo, Ontario
Jeremy Gingras	Team Leader - Semi-Volatile Instrumentation	Organics, Waterloo, Ontario
Jon Fisher	Department Manager - Inorganics	Inorganics, Waterloo, Ontario
Jon Fisher	Department Manager - Inorganics	Metals, Waterloo, Ontario

## General Comments

The analytical methods used by ALS are developed using internationally recognized reference methods (where available), such as those published by US EPA, APHA Standard Methods, ASTM, ISO, Environment Canada, BC MOE, and Ontario MOE. Refer to the ALS Quality Control Interpretive report (QCI) for applicable references and methodology summaries. Reference methods may incorporate modifications to improve performance.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

Additional information pertinent to this report will be found in the following separate attachments: Quality Control Report, QA/QC Compliance Assessment to assist with Quality Review and Sample Receipt Notification.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Application of guidelines is provided "as is" without warranty of any kind, either expressed or implied, including, but not limited to fitness for a particular purpose, or non-infringement. ALS assumes no responsibility for errors or omissions in the information. Guidelines are not adjusted for the hardness, pH or temperature of the sample (the most conservative values are used). Measurement uncertainty is not applied to test results prior to comparison with specified criteria values.

Key :      LOR: Limit of Reporting (detection limit).

Unit	Description
-	no units
%	percent
µg/L	micrograms per litre
µS/cm	microsiemens per centimetre
CU	colour units (1 cu = 1 mg/l pt)
meq/L	milliequivalents per litre
mg/L	milligrams per litre
none	none
NTU	nephelometric turbidity units
pH units	pH units

>: greater than.

<: less than.

Red shading is applied where the result is greater than the Guideline Upper Limit or the result is lower than the Guideline Lower Limit.

For drinking water samples, Red shading is applied where the result for E.coli, fecal or total coliforms is greater than or equal to the Guideline Upper Limit .

## Qualifiers

Qualifier	Description
DLDS	<i>Detection Limit Raised: Dilution required due to high Dissolved Solids / Electrical Conductivity.</i>
DLM	<i>Detection Limit Adjusted due to sample matrix effects (e.g. chemical interference, colour, turbidity).</i>
OWP	<i>Organic water sample contained visible sediment (must be included as part of analysis). Measured concentrations of organic substances in water can be biased high due to presence of sediment.</i>
RRV	<i>Reported result verified by repeat analysis.</i>

## General Comments

The ALS Quality Control (QC) report is optionally provided to ALS clients upon request. ALS test methods include comprehensive QC checks with every analysis to ensure our high standards of quality are met. Each QC result has a known or expected target value, which is compared against predetermined Data Quality Objectives (DQOs) to provide confidence in the accuracy of associated test results. This report contains detailed results for all QC results applicable to this sample submission. Please refer to the ALS Quality Control Interpretation report (QCI) for applicable method references and methodology summaries.

### Key :

- Anonymous = Refers to samples which are not part of this work order, but which formed part of the QC process lot.
- CAS Number = Chemical Abstracts Service number is a unique identifier assigned to discrete substances.
- DQO = Data Quality Objective.
- LOR = Limit of Reporting (detection limit).
- RPD = Relative Percent Difference
- # = Indicates a QC result that did not meet the ALS DQO.

## Workorder Comments

---

Holding times are displayed as "—" if no guidance exists from CCME, Canadian provinces, or broadly recognized international references.

## Laboratory Duplicate (DUP) Report

A Laboratory Duplicate (DUP) is a randomly selected intralaboratory replicate sample. Laboratory Duplicates provide information regarding method precision and sample heterogeneity. ALS DQOs for Laboratory Duplicates are expressed as test-specific limits for Relative Percent Difference (RPD), or as an absolute difference limit of 2 times the LOR for low concentration duplicates within ~ 4-10 times the LOR (cut-off is test-specific).

Sub-Matrix: Water

## Method Blank (MB) Report

A Method Blank is an analyte-free matrix that undergoes sample processing identical to that carried out for test samples. Method Blank results are used to monitor and control for potential contamination from the laboratory environment and reagents. For most tests, the DQO for Method Blanks is for the result to be < LOR.

## Laboratory Control Sample (LCS) Report

A Laboratory Control Sample (LCS) is an analyte-free matrix that has been fortified (spiked) with test analytes at known concentration and processed in an identical manner to test samples. LCS results are expressed as percent recovery, and are used to monitor and control test method accuracy and precision, independent of test sample matrix.

Sub-Matrix: Water

## Matrix Spike (MS) Report

A Matrix Spike (MS) is a randomly selected intra-laboratory replicate sample that has been fortified (spiked) with test analytes at known concentration, and processed in an identical manner to test samples. Matrix Spikes provide information regarding analyte recovery and potential matrix effects. MS DQO exceedances due to sample matrix may sometimes be unavoidable; in such cases, test results for the associated sample (or similar samples) may be subject to bias. ND – Recovery not determined, background level >= 1x spike level.

Sub-Matrix: Water

Matrix Spike (MS) Report

---

This report is automatically generated by the ALS LIMS (Laboratory Information Management System) through evaluation of Quality Control (QC) results and other QA parameters associated with this submission, and is intended to facilitate rapid data validation by auditors or reviewers. The report highlights any exceptions and outliers to ALS Data Quality Objectives, provides holding time details and exceptions, summarizes QC sample frequencies, and lists applicable methodology references and summaries.

**Key**

Anonymous: Refers to samples which are not part of this work order, but which formed part of the QC process lot.

CAS Number: Chemical Abstracts Service number is a unique identifier assigned to discrete substances.

DQO: Data Quality Objective.

LOR: Limit of Reporting (detection limit).

RPD: Relative Percent Difference.

---

### Workorder Comments

Holding times are displayed as "----" if no guidance exists from CCME, Canadian provinces, or broadly recognized international references.

---

### Summary of Outliers

#### Outliers : Quality Control Samples

- No Method Blank value outliers occur.
- No Duplicate outliers occur.
- No Laboratory Control Sample (LCS) outliers occur
- No Matrix Spike outliers occur.
- No Test sample Surrogate recovery outliers exist.

### ***Outliers: Reference Material (RM) Samples***

- No Reference Material (RM) Sample outliers occur.

### ***Outliers : Analysis Holding Time Compliance (Breaches)***

- Analysis Holding Time Outliers exist - please see following pages for full details.

### ***Outliers : Frequency of Quality Control Samples***

- No Quality Control Sample Frequency Outliers occur.

## Analysis Holding Time Compliance

This report summarizes extraction / preparation and analysis times and compares each with ALS recommended holding times, which are selected to meet known provincial and /or federal requirements. In the absence of regulatory hold times, ALS establishes recommendations based on guidelines published by organizations such as CCME, US EPA, APHA Standard Methods, ASTM, or Environment Canada (where available). Dates and holding times reported below represent the first dates of extraction or analysis. If subsequent tests or dilutions exceeded holding times, qualifiers are added (refer to COA).

If samples are identified below as having been analyzed or extracted outside of recommended holding times, measurement uncertainties may be increased, and this should be taken into consideration when interpreting results.

Where actual sampling date is not provided on the chain of custody, the date of receipt with time at 00:00 is used for calculation purposes.

Where only the sample date without time is provided on the chain of custody, the sampling date at 00:00 is used for calculation purposes.

## Legend & Qualifier Definitions

**EHTR-FM:** Exceeded ALS recommended hold time prior to sample receipt. Field Measurement recommended

EHT: Exceeded ALS recommended hold time prior to analysis.

Rec. HT: ALS recommended hold time (see units).

## Quality Control Parameter Frequency Compliance

The following report summarizes the frequency of laboratory QC samples analyzed within the analytical batches (QC lots) in which the submitted samples were processed. The actual frequency should be greater than or equal to the expected frequency.

Matrix: Water

Evaluation: ✘ = QC frequency outside specification; ✓ = QC frequency within specification.

Quality Control Sample Type	Analytical Methods	Method	QC Lot #	Count		Frequency (%)		
				QC	Regular	Actual	Expected	Evaluation
<b>Laboratory Duplicates (DUP)</b>								
Alkalinity Species by Titration		E290	787362	1	13	7.6	5.0	✓
Ammonia by Fluorescence		E298	788284	1	19	5.2	5.0	✓
BTEX by Headspace GC-MS		E611A	788079	1	13	7.6	5.0	✓
Chloride in Water by IC		E235.Cl	787358	1	16	6.2	5.0	✓

## Methodology References and Summaries

The analytical methods used by ALS are developed using internationally recognized reference methods (where available), such as those published by US EPA, APHA Standard Methods, ASTM, ISO, Environment Canada, BC MOE, and Ontario MOE. Reference methods may incorporate modifications to improve performance (indicated by "mod").

Analytical Methods	Method / Lab	Matrix	Method Reference	Method Descriptions
Conductivity in Water	E100 Waterloo - Environmental	Water	APHA 2510 (mod)	Conductivity, also known as Electrical Conductivity (EC) or Specific Conductance, is measured by immersion of a conductivity cell with platinum electrodes into a water sample. Conductivity measurements are temperature-compensated to 25°C.
pH by Meter	E108 Waterloo - Environmental	Water	APHA 4500-H (mod)	pH is determined by potentiometric measurement with a pH electrode, and is conducted at ambient laboratory temperature (normally $20 \pm 5^\circ\text{C}$ ). For high accuracy test results, pH should be measured in the field within the recommended 15 minute hold time.
Turbidity by Nephelometry	E121 Waterloo - Environmental	Water	APHA 2130 B (mod)	Turbidity is measured by the nephelometric method, by measuring the intensity of light scatter under defined conditions.
TDS by Gravimetry	E162 Waterloo - Environmental	Water	APHA 2540 C (mod)	Total Dissolved Solids (TDS) are determined by filtering a sample through a glass fibre filter, with evaporation of the filtrate at $180 \pm 2^\circ\text{C}$ for 16 hours or to constant weight, with gravimetric measurement of the residue.
Chloride in Water by IC	E235.Cl Waterloo - Environmental	Water	EPA 300.1 (mod)	Inorganic anions are analyzed by Ion Chromatography with conductivity and/or UV detection.
Fluoride in Water by IC	E235.F Waterloo - Environmental	Water	EPA 300.1 (mod)	Inorganic anions are analyzed by Ion Chromatography with conductivity and/or UV detection.
Nitrite in Water by IC	E235.NO2 Waterloo - Environmental	Water	EPA 300.1 (mod)	Inorganic anions are analyzed by Ion Chromatography with conductivity and/or UV detection.
Nitrate in Water by IC	E235.NO3 Waterloo - Environmental	Water	EPA 300.1 (mod)	Inorganic anions are analyzed by Ion Chromatography with conductivity and/or UV detection.
Sulfate in Water by IC	E235.SO4 Waterloo - Environmental	Water	EPA 300.1 (mod)	Inorganic anions are analyzed by Ion Chromatography with conductivity and/or UV detection.
Alkalinity Species by Titration	E290 Waterloo - Environmental	Water	APHA 2320 B (mod)	Total alkalinity is determined by potentiometric titration to a pH 4.5 endpoint. Bicarbonate, carbonate and hydroxide alkalinity are calculated from phenolphthalein alkalinity and total alkalinity values.

Analytical Methods				
	Method / Lab	Matrix	Method Reference	Method Descriptions
Ammonia by Fluorescence	E298 Waterloo - Environmental	Water	Method Fialab 100, 2018	Ammonia in water is determined by automated continuous flow analysis with membrane diffusion and fluorescence detection, after reaction with OPA (ortho-phthalaldehyde). This method is approved under US EPA 40 CFR Part 136 (May 2021)
Colour (Apparent) by Spectrometer	E330 Waterloo - Environmental	Water	APHA 2120 C (mod)	<p>Colour (Apparent) is measured in an unfiltered sample spectrophotometrically using the single wavelength method. The colour contribution of settleable solids are not included in the result. This method is intended for potable waters.</p> <p>Colour measurements can be highly pH dependent, and apply to the pH of the sample as received (at time of testing), without pH adjustment.</p>
Dissolved Organic Carbon by Combustion (Low Level)	E358-L Waterloo - Environmental	Water	APHA 5310 B (mod)	Dissolved Organic Carbon (Non-Purgeable), also known as NPOC (dissolved), is a direct measurement of DOC after a filtered (0.45 micron) sample has been acidified and purged to remove inorganic carbon (IC). Analysis is by high temperature combustion with infrared detection of CO <sub>2</sub> . NPOC does not include volatile organic species that are purged off with IC. For samples where the majority of DC (dissolved carbon) is comprised of IC (which is common), this method is more accurate and more reliable than the DOC by subtraction method (i.e. DC minus DIC).
Dissolved Orthophosphate by Colourimetry (Ultra Trace Level 0.001 mg/L)	E378-U Waterloo - Environmental	Water	APHA 4500-P F (mod)	<p>Dissolved Orthophosphate is determined colourimetrically on a sample that has been lab or field filtered through a 0.45 micron membrane filter.</p> <p>Field filtration is recommended to ensure test results represent conditions at time of sampling.</p>
Total metals in Water by CRC ICPMS	E420 Waterloo - Environmental	Water	EPA 200.2/6020B (mod)	<p>Water samples are digested with nitric and hydrochloric acids, and analyzed by Collision/Reaction Cell ICPMS.</p> <p>Method Limitation (re: Sulfur): Sulfide and volatile sulfur species may not be recovered by this method.</p>
Dissolved Metals in Water by CRC ICPMS	E421 Waterloo - Environmental	Water	APHA 3030B/EPA 6020B (mod)	<p>Water samples are filtered (0.45 um), preserved with nitric acid, and analyzed by Collision/Reaction Cell ICPMS.</p> <p>Method Limitation (re: Sulfur): Sulfide and volatile sulfur species may not be recovered by this method.</p>
Total Hexavalent Chromium (Cr VI) by IC	E532 Waterloo - Environmental	Water	APHA 3500-Cr C (Ion Chromatography)	<p>Hexavalent Chromium is measured by Ion chromatography-Post column reaction and UV detection.</p> <p>Results are based on an un-filtered, field-preserved sample.</p>
VPH by Headspace GC-FID (RBCA)	E581.VPH Waterloo - Environmental	Water	Atlantic RBCA Version 3.1	VPH (Volatile Petroleum Hydrocarbons) is analyzed by static headspace GC-FID. Samples are prepared in headspace vials and are heated and agitated on the headspace autosampler, causing VOCs to partition between the aqueous phase and the headspace in accordance with Henry's law.
EPH by GC-FID (RBCA)	E601F Waterloo - Environmental	Water	Atlantic RBCA Version 3.1	Sample Extracts are analyzed by GC-FID for RBCA Tier I hydrocarbon fractions C10-C16, C16-C21, C21-C32.

Analytical Methods				
	Method / Lab	Matrix	Method Reference	Method Descriptions
BTEX by Headspace GC-MS	E611A Waterloo - Environmental	Water	EPA 8260D (mod)	Volatile Organic Compounds (VOCs) are analyzed by static headspace GC-MS. Samples are prepared in headspace vials and are heated and agitated on the headspace autosampler, causing VOCs to partition between the aqueous phase and the headspace in accordance with Henry's law.
VOCs (Eastern Canada List) by Headspace GC-MS	E611D Waterloo - Environmental	Water	EPA 8260D (mod)	Volatile Organic Compounds (VOCs) are analyzed by static headspace GC-MS. Samples are prepared in headspace vials and are heated and agitated on the headspace autosampler, causing VOCs to partition between the aqueous phase and the headspace in accordance with Henry's law.
PAHs by Hexane LVI GC-MS (Low Level)	E641A-L Waterloo - Environmental	Water	EPA 8270E (mod)	Polycyclic Aromatic Hydrocarbons (PAHs) are analyzed by large volume injection (LVI) GC-MS.
PCB Aroclors by GC-MS	E687 Waterloo - Environmental	Water	EPA 8270E (mod)	PCB Aroclors are analyzed by GC-MS
Hardness (Calculated) from Total Ca/Mg	EC100A Waterloo - Environmental	Water	APHA 2340B	"Hardness (as CaCO <sub>3</sub> ), from total Ca/Mg" is calculated from the sum of total Calcium and Magnesium concentrations, expressed in CaCO <sub>3</sub> equivalents. "Total Hardness" refers to the sum of Calcium and Magnesium Hardness. Hardness is normally or preferentially calculated from dissolved Calcium and Magnesium concentrations, because it is a property of water due to dissolved divalent cations. Hardness from total Ca/Mg is normally comparable to Dissolved Hardness in non-turbid waters.
Ion Balance using Dissolved Metals	EC101 Waterloo - Environmental	Water	APHA 1030E	Cation Sum, Anion Sum, and Ion Balance are calculated based on guidance from APHA Standard Methods (1030E Checking Correctness of Analysis). Dissolved species are used where available. Minor ions are included where data is present. Ion Balance cannot be calculated accurately for waters with very low electrical conductivity (EC).
Ion Balance using Total Metals	EC101A Waterloo - Environmental	Water	APHA 1030E	Cation Sum (using total metals), Anion Sum, and Ion Balance are calculated based on guidance from APHA Standard Methods (1030E Checking Correctness of Analysis). Minor ions are included where data is present. Ion Balance cannot be calculated accurately for waters with very low electrical conductivity (EC).
Langelier Index using Laboratory pH (Ca-D)	EC105 Waterloo - Environmental	Water	APHA 2330B	Langelier Index provides an indication of scale formation potential at a given pH and temperature, and is calculated as per APHA 2330B Saturation Index. Positive values indicate oversaturation with respect to CaCO <sub>3</sub> . Negative values indicate undersaturation of CaCO <sub>3</sub> . This calculation uses laboratory pH measurements and provides estimates of Langelier Index at temperatures of 4, 15, 20, 25, 66, and 77°C. If available, Field pH measurements are recommended for best accuracy (test code EC104).
Langelier Index using Laboratory pH (Ca-T)	EC105A Waterloo - Environmental	Water	APHA 2330B	Langelier Index provides an indication of scale formation potential at a given pH and temperature, and is calculated as per APHA 2330B Saturation Index. Positive values indicate oversaturation with respect to CaCO <sub>3</sub> . Negative values indicate undersaturation of CaCO <sub>3</sub> . This calculation uses laboratory pH measurements and provides estimates of Langelier Index at temperatures of 4, 15, 20, 25, 66, and 77°C.

Analytical Methods				
	Method / Lab	Matrix	Method Reference	Method Descriptions
Nitrate and Nitrite (as N) (Calculation)	EC235.N+N Waterloo - Environmental	Water	EPA 300.0	Nitrate and Nitrite (as N) is a calculated parameter. Nitrate and Nitrite (as N) = Nitrite (as N) + Nitrate (as N).
Total Silicon as Silica (Calculation)	EC420.SiO2 Waterloo - Environmental	Water	N/A	Total Silicon (as SiO <sub>2</sub> ) is a calculated parameter. Total Silicon (as SiO <sub>2</sub> mg/L) = 2.139 x Total Silicon (mg/L).
Dissolved Silicon as Silica (Calculation)	EC421.SiO2 Waterloo - Environmental	Water	N/A	Dissolved Silicon (as SiO <sub>2</sub> ) is a calculated parameter. Dissolved Silicon (as SiO <sub>2</sub> mg/L) = 2.139 x Dissolved Silicon (mg/L).
Total Trivalent Chromium (Cr III) by Calculation	EC535 Waterloo - Environmental	Water	APHA 3030B/6020A/EPA 7196A (mod)	Chromium (III)-Total is calculated as the difference between the total chromium and the total hexavalent chromium (Cr(VI)) results. The Limit of Reporting for Chromium (III) varies as a function of the test results.
VPH C6-C10 (less BTEX) [RBCA]	EC580C Waterloo - Environmental	Water	Atlantic RBCA Version 3.1	VPH C6-C10 (less BTEX) is calculated as follows: VPH (C6-C10) minus benzene, toluene, ethylbenzene and xylenes (BTEX).
Modified TPH (RBCA) Tier I	EC581D Waterloo - Environmental	Water	Atlantic RBCA Version 3.1	Modified TPH (PIRI), Tier I is the sum of PIRI Fraction (C6 - C10 - BTEX) + (>C10 - C16) + (>C16 - C21) + (>C21 - C32).

Preparation Methods				
	Method / Lab	Matrix	Method Reference	Method Descriptions
Preparation for Ammonia	EP298 Waterloo - Environmental	Water		Sample preparation for Preserved Nutrients Water Quality Analysis.
Preparation for Dissolved Organic Carbon for Combustion	EP358 Waterloo - Environmental	Water	APHA 5310 B (mod)	Preparation for Dissolved Organic Carbon
Dissolved Metals Water Filtration	EP421 Waterloo - Environmental	Water	APHA 3030B	Water samples are filtered (0.45 um), and preserved with HNO <sub>3</sub> .
VOCs Preparation for Headspace Analysis	EP581 Waterloo - Environmental	Water	EPA 5021A (mod)	Samples are prepared in headspace vials and are heated and agitated on the headspace autosampler. An aliquot of the headspace is then injected into the GC/MS-FID system.

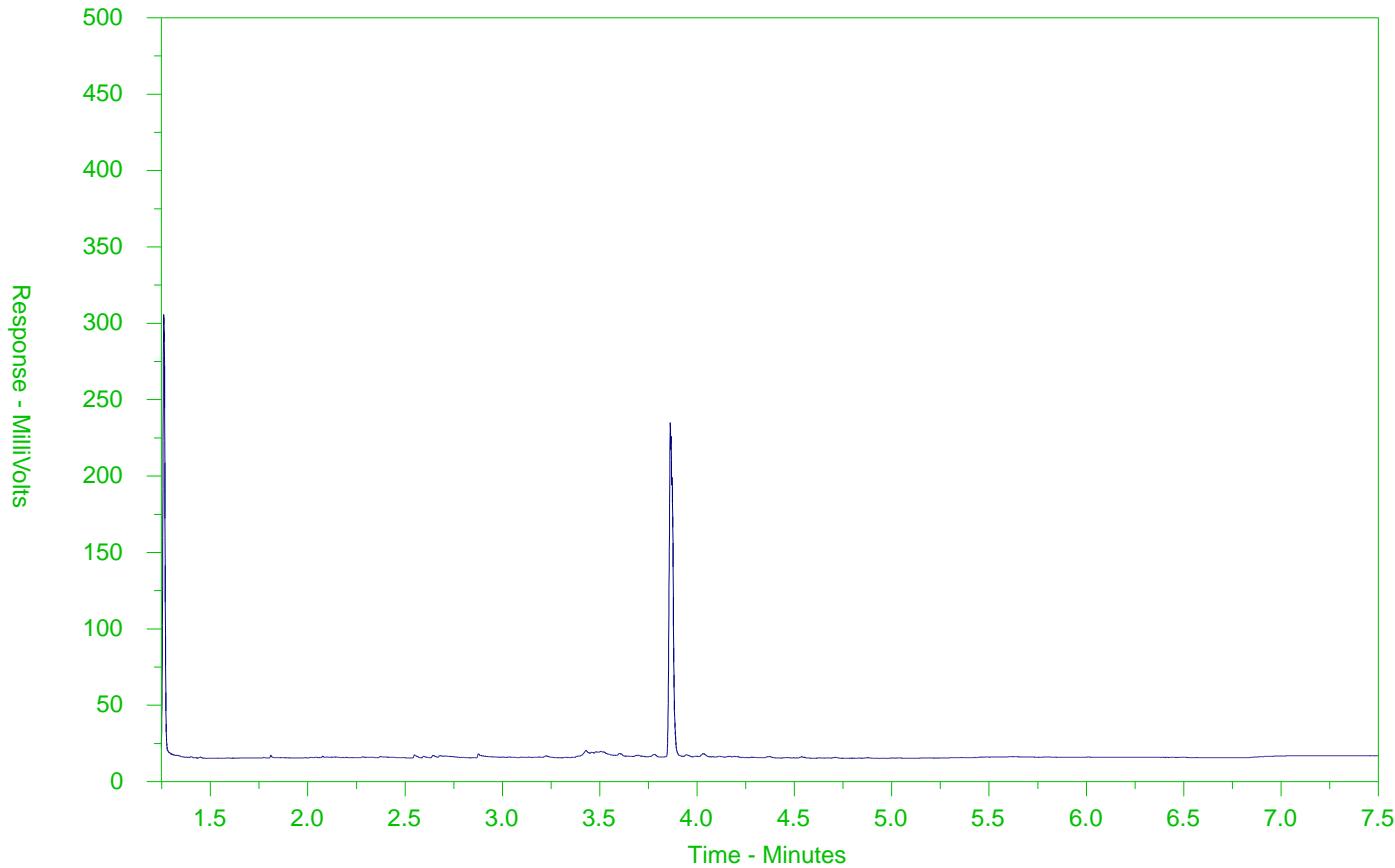

Preparation Methods				
	Method / Lab	Matrix	Method Reference	Method Descriptions
PHCs and PAHs Hexane Extraction	EP601  Waterloo - Environmental	Water	EPA 3511 (mod)	Petroleum Hydrocarbons (PHCs) and Polycyclic Aromatic Hydrocarbons (PAHs) are extracted using a hexane liquid-liquid extraction.
PHCs Hexane Extraction (RBCA)	EP601F  Waterloo - Environmental	Water	EPA 3511 (mod)	Petroleum Hydrocarbons (PHCs) are extracted using a hexane liquid-liquid extraction.
Pesticides, PCB, and Neutral Extractable Chlorinated Hydrocarbons Extraction	EP660  Waterloo - Environmental	Water	EPA 3511 (mod)	Samples are extracted from aqueous sample using an organic solvent liquid-liquid extraction.

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted. This document shall not be reproduced, except in full.

This Certificate of Analysis contains the following information:

- General Comments
- Analytical Results
- Guideline Comparison

Additional information pertinent to this report will be found in the following separate attachments: Quality Control Report, QC Interpretive report to assist with Quality Review and Sample Receipt Notification (SRN).

### Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is conducted in accordance with US FDA 21 CFR Part 11.

Signatories	Position	Laboratory Department
Andrea Armstrong	Department Manager - Air Quality and Volatiles	Organics, Waterloo, Ontario
Danielle Gravel	Supervisor - Semi-Volatile Instrumentation	Organics, Waterloo, Ontario
Emily Smith	Project Manager	External Subcontracting, St. John's, Newfoundland and Labrador
Greg Pokocky	Supervisor - Inorganic	Inorganics, Waterloo, Ontario
Greg Pokocky	Supervisor - Inorganic	Metals, Waterloo, Ontario
Jeremy Gingras	Team Leader - Semi-Volatile Instrumentation	Organics, Waterloo, Ontario
Jon Fisher	Department Manager - Inorganics	Inorganics, Waterloo, Ontario

## General Comments

The analytical methods used by ALS are developed using internationally recognized reference methods (where available), such as those published by US EPA, APHA Standard Methods, ASTM, ISO, Environment Canada, BC MOE, and Ontario MOE. Refer to the ALS Quality Control Interpretive report (QCI) for applicable references and methodology summaries. Reference methods may incorporate modifications to improve performance.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

Additional information pertinent to this report will be found in the following separate attachments: Quality Control Report, QA/QC Compliance Assessment to assist with Quality Review and Sample Receipt Notification.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Application of guidelines is provided "as is" without warranty of any kind, either expressed or implied, including, but not limited to fitness for a particular purpose, or non-infringement. ALS assumes no responsibility for errors or omissions in the information. Guidelines are not adjusted for the hardness, pH or temperature of the sample (the most conservative values are used). Measurement uncertainty is not applied to test results prior to comparison with specified criteria values.

Key :      LOR: Limit of Reporting (detection limit).

Unit	Description
-	no units
%	percent
µg/L	micrograms per litre
µS/cm	microsiemens per centimetre
CU	colour units (1 cu = 1 mg/l pt)
meq/L	milliequivalents per litre
mg/L	milligrams per litre
none	none
NTU	nephelometric turbidity units
pH units	pH units

>: greater than.

<: less than.

Red shading is applied where the result is greater than the Guideline Upper Limit or the result is lower than the Guideline Lower Limit.

For drinking water samples, Red shading is applied where the result for E.coli, fecal or total coliforms is greater than or equal to the Guideline Upper Limit .

## Qualifiers

Qualifier	Description
DLDS	<i>Detection Limit Raised: Dilution required due to high Dissolved Solids / Electrical Conductivity.</i>
DLHC	<i>Detection Limit Raised: Dilution required due to high concentration of test analyte(s).</i>
DLM	<i>Detection Limit Adjusted due to sample matrix effects (e.g. chemical interference, colour, turbidity).</i>
DLMDL	<i>Reported detection limit is at or near the Method Detection Limit (MDL). Measurement uncertainty is high at this level.</i>

## General Comments

The ALS Quality Control (QC) report is optionally provided to ALS clients upon request. ALS test methods include comprehensive QC checks with every analysis to ensure our high standards of quality are met. Each QC result has a known or expected target value, which is compared against predetermined Data Quality Objectives (DQOs) to provide confidence in the accuracy of associated test results. This report contains detailed results for all QC results applicable to this sample submission. Please refer to the ALS Quality Control Interpretation report (QCI) for applicable method references and methodology summaries.

### Key :

Anonymous = Refers to samples which are not part of this work order, but which formed part of the QC process lot.

CAS Number = Chemical Abstracts Service number is a unique identifier assigned to discrete substances.

DQO = Data Quality Objective.

LOR = Limit of Reporting (detection limit).

RPD = Relative Percent Difference

# = Indicates a QC result that did not meet the ALS DQO.

## Workorder Comments

---

Holding times are displayed as "—" if no guidance exists from CCME, Canadian provinces, or broadly recognized international references.

---

## Laboratory Duplicate (DUP) Report

A Laboratory Duplicate (DUP) is a randomly selected intralaboratory replicate sample. Laboratory Duplicates provide information regarding method precision and sample heterogeneity. ALS DQOs for Laboratory Duplicates are expressed as test-specific limits for Relative Percent Difference (RPD), or as an absolute difference limit of 2 times the LOR for low concentration duplicates within ~ 4-10 times the LOR (cut-off is test-specific).

## Method Blank (MB) Report

A Method Blank is an analyte-free matrix that undergoes sample processing identical to that carried out for test samples. Method Blank results are used to monitor and control for potential contamination from the laboratory environment and reagents. For most tests, the DQO for Method Blanks is for the result to be < LOR.

## Laboratory Control Sample (LCS) Report

A Laboratory Control Sample (LCS) is an analyte-free matrix that has been fortified (spiked) with test analytes at known concentration and processed in an identical manner to test samples. LCS results are expressed as percent recovery, and are used to monitor and control test method accuracy and precision, independent of test sample matrix.

Sub-Matrix: Water

Analyte	CAS Number	Method	LOR	Unit	Laboratory Control Sample (LCS) Report				
					Spike	Recovery (%)	Recovery Limits (%)		Qualifier
<b>Physical Tests (QCLot: 787360)</b>

## Matrix Spike (MS) Report

A Matrix Spike (MS) is a randomly selected intra-laboratory replicate sample that has been fortified (spiked) with test analytes at known concentration, and processed in an identical manner to test samples. Matrix Spikes provide information regarding analyte recovery and potential matrix effects. MS DQO exceedances due to sample matrix may sometimes be unavoidable; in such cases, test results for the associated sample (or similar samples) may be subject to bias. ND – Recovery not determined, background level >= 1x spike level.

---

This report is automatically generated by the ALS LIMS (Laboratory Information Management System) through evaluation of Quality Control (QC) results and other QA parameters associated with this submission, and is intended to facilitate rapid data validation by auditors or reviewers. The report highlights any exceptions and outliers to ALS Data Quality Objectives, provides holding time details and exceptions, summarizes QC sample frequencies, and lists applicable methodology references and summaries.

**Key**

Anonymous: Refers to samples which are not part of this work order, but which formed part of the QC process lot.

CAS Number: Chemical Abstracts Service number is a unique identifier assigned to discrete substances.

DQO: Data Quality Objective.

LOR: Limit of Reporting (detection limit).

RPD: Relative Percent Difference.

---

### Workorder Comments

---

Holding times are displayed as "----" if no guidance exists from CCME, Canadian provinces, or broadly recognized international references.

---

### Summary of Outliers

#### Outliers : Quality Control Samples

- No Method Blank value outliers occur.
- No Duplicate outliers occur.
- No Laboratory Control Sample (LCS) outliers occur
- No Matrix Spike outliers occur.
- No Test sample Surrogate recovery outliers exist.

### ***Outliers: Reference Material (RM) Samples***

- No Reference Material (RM) Sample outliers occur.

### ***Outliers : Analysis Holding Time Compliance (Breaches)***

- Analysis Holding Time Outliers exist - please see following pages for full details.

### ***Outliers : Frequency of Quality Control Samples***

- No Quality Control Sample Frequency Outliers occur.

## Analysis Holding Time Compliance

This report summarizes extraction / preparation and analysis times and compares each with ALS recommended holding times, which are selected to meet known provincial and /or federal requirements. In the absence of regulatory hold times, ALS establishes recommendations based on guidelines published by organizations such as CCME, US EPA, APHA Standard Methods, ASTM, or Environment Canada (where available). Dates and holding times reported below represent the first dates of extraction or analysis. If subsequent tests or dilutions exceeded holding times, qualifiers are added (refer to COA).

If samples are identified below as having been analyzed or extracted outside of recommended holding times, measurement uncertainties may be increased, and this should be taken into consideration when interpreting results.

Where actual sampling date is not provided on the chain of custody, the date of receipt with time at 00:00 is used for calculation purposes.

Where only the sample date without time is provided on the chain of custody, the sampling date at 00:00 is used for calculation purposes.

#### Legend & Qualifier Definitions

EHTR-FM: Exceeded ALS recommended hold time prior to sample receipt. Field Measurement recommended

EHT: Exceeded ALS recommended hold time prior to analysis.

Rec. HT: ALS recommended hold time (see units).

## Quality Control Parameter Frequency Compliance

The following report summarizes the frequency of laboratory QC samples analyzed within the analytical batches (QC lots) in which the submitted samples were processed. The actual frequency should be greater than or equal to the expected frequency.

Matrix: Water

Evaluation: ✘ = QC frequency outside specification; ✓ = QC frequency within specification.

Quality Control Sample Type	Analytical Methods	Method	QC Lot #	Count		Frequency (%)		
				QC	Regular	Actual	Expected	
<b>Laboratory Duplicates (DUP)</b>								
Alkalinity Species by Titration		E290	787362	1	13	7.6	5.0	✓

## Methodology References and Summaries

The analytical methods used by ALS are developed using internationally recognized reference methods (where available), such as those published by US EPA, APHA Standard Methods, ASTM, ISO, Environment Canada, BC MOE, and Ontario MOE. Reference methods may incorporate modifications to improve performance (indicated by "mod").

<b>Analytical Methods</b>	<b>Method / Lab</b>	<b>Matrix</b>	<b>Method Reference</b>	<b>Method Descriptions</b>
Conductivity in Water	E100 Waterloo - Environmental	Water	APHA 2510 (mod)	Conductivity, also known as Electrical Conductivity (EC) or Specific Conductance, is measured by immersion of a conductivity cell with platinum electrodes into a water sample. Conductivity measurements are temperature-compensated to 25°C.
pH by Meter	E108 Waterloo - Environmental	Water	APHA 4500-H (mod)	pH is determined by potentiometric measurement with a pH electrode, and is conducted at ambient laboratory temperature (normally $20 \pm 5^\circ\text{C}$ ). For high accuracy test results, pH should be measured in the field within the recommended 15 minute hold time.
Turbidity by Nephelometry	E121 Waterloo - Environmental	Water	APHA 2130 B (mod)	Turbidity is measured by the nephelometric method, by measuring the intensity of light scatter under defined conditions.
TDS by Gravimetry	E162 Waterloo - Environmental	Water	APHA 2540 C (mod)	Total Dissolved Solids (TDS) are determined by filtering a sample through a glass fibre filter, with evaporation of the filtrate at $180 \pm 2^\circ\text{C}$ for 16 hours or to constant weight, with gravimetric measurement of the residue.
Chloride in Water by IC	E235.Cl Waterloo - Environmental	Water	EPA 300.1 (mod)	Inorganic anions are analyzed by Ion Chromatography with conductivity and/or UV detection.
Fluoride in Water by IC	E235.F Waterloo - Environmental	Water	EPA 300.1 (mod)	Inorganic anions are analyzed by Ion Chromatography with conductivity and/or UV detection.
Nitrite in Water by IC	E235.NO2 Waterloo - Environmental	Water	EPA 300.1 (mod)	Inorganic anions are analyzed by Ion Chromatography with conductivity and/or UV detection.
Nitrate in Water by IC	E235.NO3 Waterloo - Environmental	Water	EPA 300.1 (mod)	Inorganic anions are analyzed by Ion Chromatography with conductivity and/or UV detection.
Sulfate in Water by IC	E235.SO4 Waterloo - Environmental	Water	EPA 300.1 (mod)	Inorganic anions are analyzed by Ion Chromatography with conductivity and/or UV detection.
Alkalinity Species by Titration	E290 Waterloo - Environmental	Water	APHA 2320 B (mod)	Total alkalinity is determined by potentiometric titration to a pH 4.5 endpoint. Bicarbonate, carbonate and hydroxide alkalinity are calculated from phenolphthalein alkalinity and total alkalinity values.

Analytical Methods				
	Method / Lab	Matrix	Method Reference	Method Descriptions
Ammonia by Fluorescence	E298 Waterloo - Environmental	Water	Method Fialab 100, 2018	Ammonia in water is determined by automated continuous flow analysis with membrane diffusion and fluorescence detection, after reaction with OPA (ortho-phthalaldehyde). This method is approved under US EPA 40 CFR Part 136 (May 2021)
Colour (Apparent) by Spectrometer	E330 Waterloo - Environmental	Water	APHA 2120 C (mod)	<p>Colour (Apparent) is measured in an unfiltered sample spectrophotometrically using the single wavelength method. The colour contribution of settleable solids are not included in the result. This method is intended for potable waters.</p> <p>Colour measurements can be highly pH dependent, and apply to the pH of the sample as received (at time of testing), without pH adjustment.</p>
Total Cyanide	E333 Waterloo - Environmental	Water	ISO 14403 (mod)	<p>Total or Strong Acid Dissociable (SAD) Cyanide is determined by Continuous Flow Analyzer (CFA) with in-line UV digestion followed by colourmetric analysis.</p> <p>Method Limitation: High levels of thiocyanate (SCN) may cause positive interference (up to 0.5% of SCN concentration).</p>
Dissolved Organic Carbon by Combustion (Low Level)	E358-L Waterloo - Environmental	Water	APHA 5310 B (mod)	Dissolved Organic Carbon (Non-Purgeable), also known as NPOC (dissolved), is a direct measurement of DOC after a filtered (0.45 micron) sample has been acidified and purged to remove inorganic carbon (IC). Analysis is by high temperature combustion with infrared detection of CO <sub>2</sub> . NPOC does not include volatile organic species that are purged off with IC. For samples where the majority of DC (dissolved carbon) is comprised of IC (which is common), this method is more accurate and more reliable than the DOC by subtraction method (i.e. DC minus DIC).
Dissolved Orthophosphate by Colourimetry (Ultra Trace Level 0.001 mg/L)	E378-U Waterloo - Environmental	Water	APHA 4500-P F (mod)	<p>Dissolved Orthophosphate is determined colourimetrically on a sample that has been lab or field filtered through a 0.45 micron membrane filter.</p> <p>Field filtration is recommended to ensure test results represent conditions at time of sampling.</p>
Total Sulfide by Colourimetry (Manual)	E396 Waterloo - Environmental	Water	APHA 4500-S2 D (mod)	<p>Total Sulfide is determined by spectrophotometer using the methylene blue colourimetric method. Results expressed "as H<sub>2</sub>S" if reported represent the maximum possible H<sub>2</sub>S concentration based on the total sulfide concentration in the sample.</p> <p>The H<sub>2</sub>S calculation converts Total Sulphide as (S<sup>2-</sup>) and reports it as Total Sulphide as (H<sub>2</sub>S).</p>
Total metals in Water by CRC ICPMS	E420 Waterloo - Environmental	Water	EPA 200.2/6020B (mod)	<p>Water samples are digested with nitric and hydrochloric acids, and analyzed by Collision/Reaction Cell ICPMS.</p> <p>Method Limitation (re: Sulfur): Sulfide and volatile sulfur species may not be recovered by this method.</p>
Dissolved Metals in Water by CRC ICPMS	E421 Waterloo - Environmental	Water	APHA 3030B/EPA 6020B (mod)	<p>Water samples are filtered (0.45 um), preserved with nitric acid, and analyzed by Collision/Reaction Cell ICPMS.</p> <p>Method Limitation (re: Sulfur): Sulfide and volatile sulfur species may not be recovered by this method.</p>

Analytical Methods				
	Method / Lab	Matrix	Method Reference	Method Descriptions
Total Mercury in Water by CVAAS	E508 Waterloo - Environmental	Water	EPA 1631E (mod)	Water samples undergo a cold-oxidation using bromine monochloride prior to reduction with stannous chloride, and analyzed by CVAAS
Dissolved Mercury in Water by CVAAS	E509 Waterloo - Environmental	Water	APHA 3030B/EPA 1631E (mod)	Water samples are filtered (0.45 um), preserved with HCl, then undergo a cold-oxidation using bromine monochloride prior to reduction with stannous chloride, and analyzed by CVAAS.
Total Hexavalent Chromium (Cr VI) by IC	E532 Waterloo - Environmental	Water	APHA 3500-Cr C (Ion Chromatography)	Hexavalent Chromium is measured by Ion chromatography-Post column reaction and UV detection.  Results are based on an un-filtered, field-preserved sample.
Phenols (4AAP) in Water by Colorimetry	E562 Waterloo - Environmental	Water	EPA 9066	This automated method is based on the distillation of phenol and subsequent reaction of the distillate with alkaline ferricyanide (K3Fe(CN)6) and 4-amino-antipyrine (4-AAP) to form a red complex which is measured colorimetrically.
VPH by Headspace GC-FID (RBCA)	E581.VPH Waterloo - Environmental	Water	Atlantic RBCA Version 3.1	VPH (Volatile Petroleum Hydrocarbons) is analyzed by static headspace GC-FID. Samples are prepared in headspace vials and are heated and agitated on the headspace autosampler, causing VOCs to partition between the aqueous phase and the headspace in accordance with Henry's law.
EPH by GC-FID (RBCA)	E601F Waterloo - Environmental	Water	Atlantic RBCA Version 3.1	Sample Extracts are analyzed by GC-FID for RBCA Tier I hydrocarbon fractions C10-C16, C16-C21, C21-C32.
BTEX by Headspace GC-MS	E611A Waterloo - Environmental	Water	EPA 8260D (mod)	Volatile Organic Compounds (VOCs) are analyzed by static headspace GC-MS. Samples are prepared in headspace vials and are heated and agitated on the headspace autosampler, causing VOCs to partition between the aqueous phase and the headspace in accordance with Henry's law.
VOCs (Eastern Canada List) by Headspace GC-MS	E611D Waterloo - Environmental	Water	EPA 8260D (mod)	Volatile Organic Compounds (VOCs) are analyzed by static headspace GC-MS. Samples are prepared in headspace vials and are heated and agitated on the headspace autosampler, causing VOCs to partition between the aqueous phase and the headspace in accordance with Henry's law.
PAHs by Hexane LVI GC-MS (Low Level)	E641A-L Waterloo - Environmental	Water	EPA 8270E (mod)	Polycyclic Aromatic Hydrocarbons (PAHs) are analyzed by large volume injection (LVI) GC-MS.
PCB Aroclors by GC-MS	E687 Waterloo - Environmental	Water	EPA 8270E (mod)	PCB Aroclors are analyzed by GC-MS

Analytical Methods				
	Method / Lab	Matrix	Method Reference	Method Descriptions
Hardness (Calculated) from Total Ca/Mg	EC100A Waterloo - Environmental	Water	APHA 2340B	"Hardness (as CaCO <sub>3</sub> ) from total Ca/Mg" is calculated from the sum of total Calcium and Magnesium concentrations, expressed in CaCO <sub>3</sub> equivalents. "Total Hardness" refers to the sum of Calcium and Magnesium Hardness. Hardness is normally or preferentially calculated from dissolved Calcium and Magnesium concentrations, because it is a property of water due to dissolved divalent cations. Hardness from total Ca/Mg is normally comparable to Dissolved Hardness in non-turbid waters.
Ion Balance using Total Metals	EC101A Waterloo - Environmental	Water	APHA 1030E	Cation Sum (using total metals), Anion Sum, and Ion Balance are calculated based on guidance from APHA Standard Methods (1030E Checking Correctness of Analysis). Minor ions are included where data is present. Ion Balance cannot be calculated accurately for waters with very low electrical conductivity (EC).
Langelier Index using Laboratory pH (Ca-T)	EC105A Waterloo - Environmental	Water	APHA 2330B	Langelier Index provides an indication of scale formation potential at a given pH and temperature, and is calculated as per APHA 2330B Saturation Index. Positive values indicate oversaturation with respect to CaCO <sub>3</sub> . Negative values indicate undersaturation of CaCO <sub>3</sub> . This calculation uses laboratory pH measurements and provides estimates of Langelier Index at temperatures of 4, 15, 20, 25, 66, and 77°C.
Nitrate and Nitrite (as N) (Calculation)	EC235.N+N Waterloo - Environmental	Water	EPA 300.0	Nitrate and Nitrite (as N) is a calculated parameter. Nitrate and Nitrite (as N) = Nitrite (as N) + Nitrate (as N).
Total Silicon as Silica (Calculation)	EC420.SiO <sub>2</sub> Waterloo - Environmental	Water	N/A	Total Silicon (as SiO <sub>2</sub> ) is a calculated parameter. Total Silicon (as SiO <sub>2</sub> mg/L) = 2.139 x Total Silicon (mg/L).
Total Trivalent Chromium (Cr III) by Calculation	EC535 Waterloo - Environmental	Water	APHA 3030B/6020A/EPA 7196A (mod)	Chromium (III)-Total is calculated as the difference between the total chromium and the total hexavalent chromium (Cr(VI)) results. The Limit of Reporting for Chromium (III) varies as a function of the test results.
VPH C6-C10 (less BTEX) [RBCA]	EC580C Waterloo - Environmental	Water	Atlantic RBCA Version 3.1	VPH C6-C10 (less BTEX) is calculated as follows: VPH (C6-C10) minus benzene, toluene, ethylbenzene and xylenes (BTEX).
Modified TPH (RBCA) Tier I	EC581D Waterloo - Environmental	Water	Atlantic RBCA Version 3.1	Modified TPH (PIRI), Tier I is the sum of PIRI Fraction (C6 - C10 - BTEX) + (>C10 - C16) + (>C16 - C21) + (>C21 - C32).
Survival/LC50 Rainbow Trout (96 hours)	TRT-LC50-96 Avalon Laboratories Inc. - 5 Sea Rose Ave. St. John's Newfoundland and Labrador Canada A1A 0P6	Water	EPS1/RM/13	See attached report.

<i>Preparation Methods</i>	<i>Method / Lab</i>	<i>Matrix</i>	<i>Method Reference</i>	<i>Method Descriptions</i>
Preparation for Ammonia	EP298 Waterloo - Environmental	Water		Sample preparation for Preserved Nutrients Water Quality Analysis.
Preparation for Dissolved Organic Carbon for Combustion	EP358 Waterloo - Environmental	Water	APHA 5310 B (mod)	Preparation for Dissolved Organic Carbon
Dissolved Metals Water Filtration	EP421 Waterloo - Environmental	Water	APHA 3030B	Water samples are filtered (0.45 um), and preserved with HNO3.
Dissolved Mercury Water Filtration	EP509 Waterloo - Environmental	Water	APHA 3030B	Water samples are filtered (0.45 um), and preserved with HCl.
VOCs Preparation for Headspace Analysis	EP581 Waterloo - Environmental	Water	EPA 5021A (mod)	Samples are prepared in headspace vials and are heated and agitated on the headspace autosampler. An aliquot of the headspace is then injected into the GC/MS-FID system.
PHCs and PAHs Hexane Extraction	EP601 Waterloo - Environmental	Water	EPA 3511 (mod)	Petroleum Hydrocarbons (PHCs) and Polycyclic Aromatic Hydrocarbons (PAHs) are extracted using a hexane liquid-liquid extraction.
PHCs Hexane Extraction (RBCA)	EP601F Waterloo - Environmental	Water	EPA 3511 (mod)	Petroleum Hydrocarbons (PHCs) are extracted using a hexane liquid-liquid extraction.
Pesticides, PCB, and Neutral Extractable Chlorinated Hydrocarbons Extraction	EP660 Waterloo - Environmental	Water	EPA 3511 (mod)	Samples are extracted from aqueous sample using an organic solvent liquid-liquid extraction.

## RBCA HYDROCARBON DISTRIBUTION REPORT

right solutions.  
right partner.

ALS Sample ID: HA2200073-001-E601F  
 Client Sample ID: PLCS

IBB*	nC10	nC12	nC16	nC21	nC32*	nC50
174°C	287°C			464°C		575°C
Gasoline				Lubricating Oil		
Fuel Oils / Diesel						

The RBCA Hydrocarbon Distribution Report (HDR) is intended to assist you in characterizing hydrocarbon products that may be present in your sample. This chromatogram was produced using GC conditions that are specific to ALS Canada's RBCA and CCME methods. Refer to the ALS Canada F2-F4 / RBCA Library to help determine likely contamination sources. The HDR library can be found at [www.alsglobal.com](http://www.alsglobal.com).

The scale at the bottom of the chromatogram shows boiling points of common petroleum products, with approximate retention times of n-alkane hydrocarbon marker compounds. Surrogates (added by the lab as QC) are shown with a "\*". Peak heights (millivolts) are a function of sample concentration, the amount of sample

## Chrom Perfect Chromatogram Report

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted. This document shall not be reproduced, except in full.

This Certificate of Analysis contains the following information:

- General Comments
- Analytical Results
- Guideline Comparison

Additional information pertinent to this report will be found in the following separate attachments: Quality Control Report, QC Interpretive report to assist with Quality Review and Sample Receipt Notification (SRN).

### Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is conducted in accordance with US FDA 21 CFR Part 11.

Signatories	Position	Laboratory Department
Greg Pokocky	Supervisor - Inorganic	Inorganics, Waterloo, Ontario
Greg Pokocky	Supervisor - Inorganic	Metals, Waterloo, Ontario
Jeremy Gingras	Team Leader - Semi-Volatile Instrumentation	Organics, Waterloo, Ontario
Jocelyn Kennedy	Department Manager - Semi-Volatile Organics	Organics, Waterloo, Ontario
Sarah Birch	VOC Section Supervisor	Organics, Waterloo, Ontario

## General Comments

The analytical methods used by ALS are developed using internationally recognized reference methods (where available), such as those published by US EPA, APHA Standard Methods, ASTM, ISO, Environment Canada, BC MOE, and Ontario MOE. Refer to the ALS Quality Control Interpretive report (QCI) for applicable references and methodology summaries. Reference methods may incorporate modifications to improve performance.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

Additional information pertinent to this report will be found in the following separate attachments: Quality Control Report, QA/QC Compliance Assessment to assist with Quality Review and Sample Receipt Notification.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Application of guidelines is provided "as is" without warranty of any kind, either expressed or implied, including, but not limited to fitness for a particular purpose, or non-infringement. ALS assumes no responsibility for errors or omissions in the information. Guidelines are not adjusted for the hardness, pH or temperature of the sample (the most conservative values are used). Measurement uncertainty is not applied to test results prior to comparison with specified criteria values.

Key :      LOR: Limit of Reporting (detection limit).

Unit	Description
-	no units
%	percent
µg/L	micrograms per litre
µS/cm	microsiemens per centimetre
CU	colour units (1 cu = 1 mg/l pt)
meq/L	milliequivalents per litre
mg/L	milligrams per litre
none	none
NTU	nephelometric turbidity units
pH units	pH units

>: greater than.

<: less than.

Red shading is applied where the result is greater than the Guideline Upper Limit or the result is lower than the Guideline Lower Limit.

For drinking water samples, Red shading is applied where the result for E.coli, fecal or total coliforms is greater than or equal to the Guideline Upper Limit .

## Qualifiers

Qualifier	Description
DLDS	<i>Detection Limit Raised: Dilution required due to high Dissolved Solids / Electrical Conductivity.</i>
DLHC	<i>Detection Limit Raised: Dilution required due to high concentration of test analyte(s).</i>
DLM	<i>Detection Limit Adjusted due to sample matrix effects (e.g. chemical interference, colour, turbidity).</i>
SUR-ND	<i>Surrogate recovery marginally exceeded ALS DQO. Reported non-detect results for associated samples were deemed to be unaffected.</i>

This report supersedes any previous report(s) with this reference. Results apply to the sample(s) as submitted. This document shall not be reproduced, except in full.

This Quality Control Report contains the following information:

- Laboratory Duplicate (DUP) Report; Relative Percent Difference (RPD) and Data Quality Objectives
- Matrix Spike (MS) Report; Recovery and Data Quality Objectives
- Method Blank (MB) Report; Recovery and Data Quality Objectives
- Laboratory Control Sample (LCS) Report; Recovery and Data Quality Objectives

---

### Signatories

This document has been electronically signed by the authorized signatories below. Electronic signing is conducted in accordance with US FDA 21 CFR Part 11.

Signatories	Position	Laboratory Department
Greg Pokocky	Supervisor - Inorganic	Waterloo Inorganics, Waterloo, Ontario
Greg Pokocky	Supervisor - Inorganic	Waterloo Metals, Waterloo, Ontario
Jeremy Gingras	Team Leader - Semi-Volatile Instrumentation	Waterloo Organics, Waterloo, Ontario
Jocelyn Kennedy	Department Manager - Semi-Volatile Organics	Waterloo Organics, Waterloo, Ontario
Sarah Birch	VOC Section Supervisor	Waterloo Organics, Waterloo, Ontario

## General Comments

The ALS Quality Control (QC) report is optionally provided to ALS clients upon request. ALS test methods include comprehensive QC checks with every analysis to ensure our high standards of quality are met. Each QC result has a known or expected target value, which is compared against predetermined Data Quality Objectives (DQOs) to provide confidence in the accuracy of associated test results. This report contains detailed results for all QC results applicable to this sample submission. Please refer to the ALS Quality Control Interpretation report (QCI) for applicable method references and methodology summaries.

### Key :

Anonymous = Refers to samples which are not part of this work order, but which formed part of the QC process lot.

CAS Number = Chemical Abstracts Service number is a unique identifier assigned to discrete substances.

DQO = Data Quality Objective.

LOR = Limit of Reporting (detection limit).

RPD = Relative Percent Difference

# = Indicates a QC result that did not meet the ALS DQO.

## Workorder Comments

---

Holding times are displayed as "—" if no guidance exists from CCME, Canadian provinces, or broadly recognized international references.

---

## Laboratory Duplicate (DUP) Report

A Laboratory Duplicate (DUP) is a randomly selected intralaboratory replicate sample. Laboratory Duplicates provide information regarding method precision and sample heterogeneity. ALS DQOs for Laboratory Duplicates are expressed as test-specific limits for Relative Percent Difference (RPD), or as an absolute difference limit of 2 times the LOR for low concentration duplicates within ~ 4-10 times the LOR (cut-off is test-specific).

Sub-Matrix: Water

## Method Blank (MB) Report

A Method Blank is an analyte-free matrix that undergoes sample processing identical to that carried out for test samples. Method Blank results are used to monitor and control for potential contamination from the laboratory environment and reagents. For most tests, the DQO for Method Blanks is for the result to be < LOR.

Sub-Matrix: Water

## Laboratory Control Sample (LCS) Report

A Laboratory Control Sample (LCS) is an analyte-free matrix that has been fortified (spiked) with test analytes at known concentration and processed in an identical manner to test samples. LCS results are expressed as percent recovery, and are used to monitor and control test method accuracy and precision, independent of test sample matrix.

Sub-Matrix: Water

## Matrix Spike (MS) Report

A Matrix Spike (MS) is a randomly selected intra-laboratory replicate sample that has been fortified (spiked) with test analytes at known concentration, and processed in an identical manner to test samples. Matrix Spikes provide information regarding analyte recovery and potential matrix effects. MS DQO exceedances due to sample matrix may sometimes be unavoidable; in such cases, test results for the associated sample (or similar samples) may be subject to bias. ND – Recovery not determined, background level >= 1x spike level.

Sub-Matrix: Water

---

This report is automatically generated by the ALS LIMS (Laboratory Information Management System) through evaluation of Quality Control (QC) results and other QA parameters associated with this submission, and is intended to facilitate rapid data validation by auditors or reviewers. The report highlights any exceptions and outliers to ALS Data Quality Objectives, provides holding time details and exceptions, summarizes QC sample frequencies, and lists applicable methodology references and summaries.

**Key**

Anonymous: Refers to samples which are not part of this work order, but which formed part of the QC process lot.

CAS Number: Chemical Abstracts Service number is a unique identifier assigned to discrete substances.

DQO: Data Quality Objective.

LOR: Limit of Reporting (detection limit).

RPD: Relative Percent Difference.

---

### Workorder Comments

---

Holding times are displayed as "----" if no guidance exists from CCME, Canadian provinces, or broadly recognized international references.

---

### Summary of Outliers

#### Outliers : Quality Control Samples

- No Method Blank value outliers occur.
- No Duplicate outliers occur.
- No Laboratory Control Sample (LCS) outliers occur
- No Matrix Spike outliers occur.
- Test sample Surrogate recovery outliers exist for all regular sample matrices - please see following pages for full details.

### ***Outliers: Reference Material (RM) Samples***

- No Reference Material (RM) Sample outliers occur.

### ***Outliers : Analysis Holding Time Compliance (Breaches)***

- Analysis Holding Time Outliers exist - please see following pages for full details.

### ***Outliers : Frequency of Quality Control Samples***

- No Quality Control Sample Frequency Outliers occur.

**Regular Sample Surrogates**

**Sub-Matrix: Water**

Analyte Group	Laboratory sample ID	Client/Ref Sample ID	Analyte	CAS Number	Result	Limits	Comment
<b>Samples Submitted</b>							
Hydrocarbons Surrogates	HA2300003-001	MW93-1	isobutylbenzene (EPH)	538-93-2	55.1 %	60.0-140 %	Recovery less than lower data quality objective
Hydrocarbons Surrogates	HA2300003-002	MW93-1A	isobutylbenzene (EPH)	538-93-2	52.3 %	60.0-140 %	Recovery less than lower data quality objective

## Analysis Holding Time Compliance

This report summarizes extraction / preparation and analysis times and compares each with ALS recommended holding times, which are selected to meet known provincial and /or federal requirements. In the absence of regulatory hold times, ALS establishes recommendations based on guidelines published by organizations such as CCME, US EPA, APHA Standard Methods, ASTM, or Environment Canada (where available). Dates and holding times reported below represent the first dates of extraction or analysis. If subsequent tests or dilutions exceeded holding times, qualifiers are added (refer to COA).

If samples are identified below as having been analyzed or extracted outside of recommended holding times, measurement uncertainties may be increased, and this should be taken into consideration when interpreting results.

Where actual sampling date is not provided on the chain of custody, the date of receipt with time at 00:00 is used for calculation purposes.

Where only the sample date without time is provided on the chain of custody, the sampling date at 00:00 is used for calculation purposes.

## Legend & Qualifier Definitions

EHTR-FM: Exceeded ALS recommended hold time prior to sample receipt. Field Measurement recommended

EHTL: Exceeded ALS recommended hold time prior to analysis. Sample was received less than 24 hours prior to expiry.

Rec. HT: ALS recommended hold time (see units).

## Quality Control Parameter Frequency Compliance

The following report summarizes the frequency of laboratory QC samples analyzed within the analytical batches (QC lots) in which the submitted samples were processed. The actual frequency should be greater than or equal to the expected frequency.

Matrix: Water

Evaluation: ✗ = QC frequency outside specification; ✓ = QC frequency within specification.

Quality Control Sample Type	Analytical Methods	Method	QC Lot #	Count		Frequency (%)		
				QC	Regular	Actual	Expected	Evaluation
<b>Laboratory Duplicates (DUP)</b>								
Alkalinity Species by Titration		E290	795320	1	9	11.1	5.0	✓
Ammonia by Fluorescence		E298	795079	1	10	10.0	5.0	✓
BTEX by Headspace GC-MS		E611A	795359	1	4	25.0	5.0	✓
Chloride in Water by IC		E235.Cl	795316	1	9	11.1	5.0	✓
Colour (Apparent) by Spectrometer		E330	797641	1	9	11.1	5.0	✓

## Methodology References and Summaries

The analytical methods used by ALS are developed using internationally recognized reference methods (where available), such as those published by US EPA, APHA Standard Methods, ASTM, ISO, Environment Canada, BC MOE, and Ontario MOE. Reference methods may incorporate modifications to improve performance (indicated by "mod").

<b>Analytical Methods</b>	<b>Method / Lab</b>	<b>Matrix</b>	<b>Method Reference</b>	<b>Method Descriptions</b>
Conductivity in Water	E100 Waterloo - Environmental	Water	APHA 2510 (mod)	Conductivity, also known as Electrical Conductivity (EC) or Specific Conductance, is measured by immersion of a conductivity cell with platinum electrodes into a water sample. Conductivity measurements are temperature-compensated to 25°C.
pH by Meter	E108 Waterloo - Environmental	Water	APHA 4500-H (mod)	pH is determined by potentiometric measurement with a pH electrode, and is conducted at ambient laboratory temperature (normally $20 \pm 5^\circ\text{C}$ ). For high accuracy test results, pH should be measured in the field within the recommended 15 minute hold time.
Turbidity by Nephelometry	E121 Waterloo - Environmental	Water	APHA 2130 B (mod)	Turbidity is measured by the nephelometric method, by measuring the intensity of light scatter under defined conditions.
TDS by Gravimetry	E162 Waterloo - Environmental	Water	APHA 2540 C (mod)	Total Dissolved Solids (TDS) are determined by filtering a sample through a glass fibre filter, with evaporation of the filtrate at $180 \pm 2^\circ\text{C}$ for 16 hours or to constant weight, with gravimetric measurement of the residue.
Chloride in Water by IC	E235.Cl Waterloo - Environmental	Water	EPA 300.1 (mod)	Inorganic anions are analyzed by Ion Chromatography with conductivity and/or UV detection.
Fluoride in Water by IC	E235.F Waterloo - Environmental	Water	EPA 300.1 (mod)	Inorganic anions are analyzed by Ion Chromatography with conductivity and/or UV detection.
Nitrite in Water by IC	E235.NO2 Waterloo - Environmental	Water	EPA 300.1 (mod)	Inorganic anions are analyzed by Ion Chromatography with conductivity and/or UV detection.
Nitrate in Water by IC	E235.NO3 Waterloo - Environmental	Water	EPA 300.1 (mod)	Inorganic anions are analyzed by Ion Chromatography with conductivity and/or UV detection.
Sulfate in Water by IC	E235.SO4 Waterloo - Environmental	Water	EPA 300.1 (mod)	Inorganic anions are analyzed by Ion Chromatography with conductivity and/or UV detection.
Alkalinity Species by Titration	E290 Waterloo - Environmental	Water	APHA 2320 B (mod)	Total alkalinity is determined by potentiometric titration to a pH 4.5 endpoint. Bicarbonate, carbonate and hydroxide alkalinity are calculated from phenolphthalein alkalinity and total alkalinity values.

Analytical Methods				
	Method / Lab	Matrix	Method Reference	Method Descriptions
Ammonia by Fluorescence	E298 Waterloo - Environmental	Water	Method Fialab 100, 2018	Ammonia in water is determined by automated continuous flow analysis with membrane diffusion and fluorescence detection, after reaction with OPA (ortho-phthalaldehyde). This method is approved under US EPA 40 CFR Part 136 (May 2021)
Colour (Apparent) by Spectrometer	E330 Waterloo - Environmental	Water	APHA 2120 C (mod)	<p>Colour (Apparent) is measured in an unfiltered sample spectrophotometrically using the single wavelength method. The colour contribution of settleable solids are not included in the result. This method is intended for potable waters.</p> <p>Colour measurements can be highly pH dependent, and apply to the pH of the sample as received (at time of testing), without pH adjustment.</p>
Dissolved Organic Carbon by Combustion (Low Level)	E358-L Waterloo - Environmental	Water	APHA 5310 B (mod)	Dissolved Organic Carbon (Non-Purgeable), also known as NPOC (dissolved), is a direct measurement of DOC after a filtered (0.45 micron) sample has been acidified and purged to remove inorganic carbon (IC). Analysis is by high temperature combustion with infrared detection of CO <sub>2</sub> . NPOC does not include volatile organic species that are purged off with IC. For samples where the majority of DC (dissolved carbon) is comprised of IC (which is common), this method is more accurate and more reliable than the DOC by subtraction method (i.e. DC minus DIC).
Dissolved Orthophosphate by Colourimetry (Ultra Trace Level 0.001 mg/L)	E378-U Waterloo - Environmental	Water	APHA 4500-P F (mod)	<p>Dissolved Orthophosphate is determined colourimetrically on a sample that has been lab or field filtered through a 0.45 micron membrane filter.</p> <p>Field filtration is recommended to ensure test results represent conditions at time of sampling.</p>
Dissolved Metals in Water by CRC ICPMS	E421 Waterloo - Environmental	Water	APHA 3030B/EPA 6020B (mod)	<p>Water samples are filtered (0.45 um), preserved with nitric acid, and analyzed by Collision/Reaction Cell ICPMS.</p> <p>Method Limitation (re: Sulfur): Sulfide and volatile sulfur species may not be recovered by this method.</p>
VPH by Headspace GC-FID (RBCA)	E581.VPH Waterloo - Environmental	Water	Atlantic RBCA Version 3.1	VPH (Volatile Petroleum Hydrocarbons) is analyzed by static headspace GC-FID. Samples are prepared in headspace vials and are heated and agitated on the headspace autosampler, causing VOCs to partition between the aqueous phase and the headspace in accordance with Henry's law.
EPH by GC-FID (RBCA)	E601F Waterloo - Environmental	Water	Atlantic RBCA Version 3.1	Sample Extracts are analyzed by GC-FID for RBCA Tier I hydrocarbon fractions C10-C16, C16-C21, C21-C32.
BTEX by Headspace GC-MS	E611A Waterloo - Environmental	Water	EPA 8260D (mod)	Volatile Organic Compounds (VOCs) are analyzed by static headspace GC-MS. Samples are prepared in headspace vials and are heated and agitated on the headspace autosampler, causing VOCs to partition between the aqueous phase and the headspace in accordance with Henry's law.
VOCs (Eastern Canada List) by Headspace GC-MS	E611D Waterloo - Environmental	Water	EPA 8260D (mod)	Volatile Organic Compounds (VOCs) are analyzed by static headspace GC-MS. Samples are prepared in headspace vials and are heated and agitated on the headspace autosampler, causing VOCs to partition between the aqueous phase and the headspace in accordance with Henry's law.

Analytical Methods				
	Method / Lab	Matrix	Method Reference	Method Descriptions
PAHs by Hexane LVI GC-MS (Low Level)	E641A-L Waterloo - Environmental	Water	EPA 8270E (mod)	Polycyclic Aromatic Hydrocarbons (PAHs) are analyzed by large volume injection (LVI) GC-MS.
PCB Aroclors by GC-MS	E687 Waterloo - Environmental	Water	EPA 8270E (mod)	PCB Aroclors are analyzed by GC-MS
Ion Balance using Dissolved Metals	EC101 Waterloo - Environmental	Water	APHA 1030E	Cation Sum, Anion Sum, and Ion Balance are calculated based on guidance from APHA Standard Methods (1030E Checking Correctness of Analysis). Dissolved species are used where available. Minor ions are included where data is present. Ion Balance cannot be calculated accurately for waters with very low electrical conductivity (EC).
Langelier Index using Laboratory pH (Ca-D)	EC105 Waterloo - Environmental	Water	APHA 2330B	Langelier Index provides an indication of scale formation potential at a given pH and temperature, and is calculated as per APHA 2330B Saturation Index. Positive values indicate oversaturation with respect to CaCO <sub>3</sub> . Negative values indicate undersaturation of CaCO <sub>3</sub> . This calculation uses laboratory pH measurements and provides estimates of Langelier Index at temperatures of 4, 15, 20, 25, 66, and 77°C. If available, Field pH measurements are recommended for best accuracy (test code EC104).
Nitrate and Nitrite (as N) (Calculation)	EC235.N+N Waterloo - Environmental	Water	EPA 300.0	Nitrate and Nitrite (as N) is a calculated parameter. Nitrate and Nitrite (as N) = Nitrite (as N) + Nitrate (as N).
Dissolved Silicon as Silica (Calculation)	EC421.SiO <sub>2</sub> Waterloo - Environmental	Water	N/A	Dissolved Silicon (as SiO <sub>2</sub> ) is a calculated parameter. Dissolved Silicon (as SiO <sub>2</sub> mg/L) = 2.139 x Dissolved Silicon (mg/L).
VPH C6-C10 (less BTEX) [RBCA]	EC580C Waterloo - Environmental	Water	Atlantic RBCA Version 3.1	VPH C6-C10 (less BTEX) is calculated as follows: VPH (C6-C10) minus benzene, toluene, ethylbenzene and xylenes (BTEX).
Modified TPH (RBCA) Tier I	EC581D Waterloo - Environmental	Water	Atlantic RBCA Version 3.1	Modified TPH (PIRI), Tier I is the sum of PIRI Fraction (C6 - C10 - BTEX) + (>C10 - C16) + (>C16 - C21) + (>C21 - C32).
Preparation Methods				
Preparation for Ammonia	EP298 Waterloo - Environmental	Water		Sample preparation for Preserved Nutrients Water Quality Analysis.

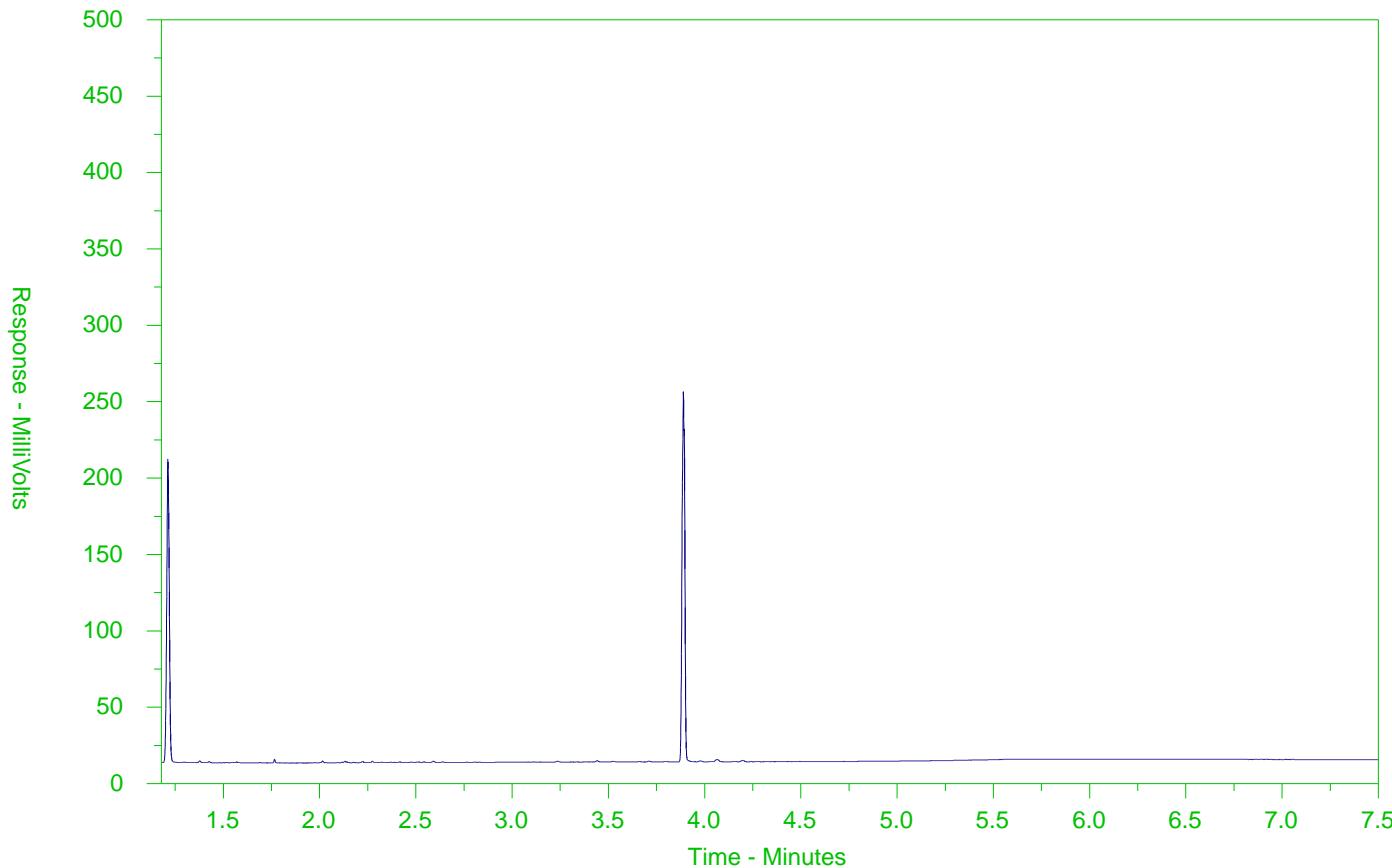

Preparation Methods	Method / Lab	Matrix	Method Reference	Method Descriptions
Preparation for Dissolved Organic Carbon for Combustion	EP358 Waterloo - Environmental	Water	APHA 5310 B (mod)	Preparation for Dissolved Organic Carbon
Dissolved Metals Water Filtration	EP421 Waterloo - Environmental	Water	APHA 3030B	Water samples are filtered (0.45 um), and preserved with HNO3.
VOCs Preparation for Headspace Analysis	EP581 Waterloo - Environmental	Water	EPA 5021A (mod)	Samples are prepared in headspace vials and are heated and agitated on the headspace autosampler. An aliquot of the headspace is then injected into the GC/MS-FID system.
PHCs and PAHs Hexane Extraction	EP601 Waterloo - Environmental	Water	EPA 3511 (mod)	Petroleum Hydrocarbons (PHCs) and Polycyclic Aromatic Hydrocarbons (PAHs) are extracted using a hexane liquid-liquid extraction.
PHCs Hexane Extraction (RBCA)	EP601F Waterloo - Environmental	Water	EPA 3511 (mod)	Petroleum Hydrocarbons (PHCs) are extracted using a hexane liquid-liquid extraction.
Pesticides, PCB, and Neutral Extractable Chlorinated Hydrocarbons Extraction	EP660 Waterloo - Environmental	Water	EPA 3511 (mod)	Samples are extracted from aqueous sample using an organic solvent liquid-liquid extraction.

The RBCA Hydrocarbon Distribution Report (HDR) is intended to assist you in characterizing hydrocarbon products that may be present in your sample. This chromatogram was produced using GC conditions that are specific to ALS Canada's RBCA and CCME methods. Refer to the ALS Canada F2-F4 / RBCA Library to help determine likely contamination sources. The HDR library can be found at [www.alsglobal.com](http://www.alsglobal.com).

The scale at the bottom of the chromatogram shows boiling points of common petroleum products, with approximate retention times of n-alkane hydrocarbon marker compounds. Surrogates (added by the lab as QC) are shown with a "\*". Peak heights (millivolts) are a function of sample concentration, the amount of sample

Analysis completed by Maxxam Analytics Inc. laboratory in Bedford, NS.

\* Ontario Ministry of the Environment (MOE) "Soil, Ground Water and Sediment Standards for Use Under Part XV.1 of the Environmental Protection Act", April 15, 2011, Table 3: Full Depth Generic Site Condition Standards in a Non-Potable Ground Water Condition

RDL = Reportable Detection Limit

SW = Surface Water Sample

- = Not analysed/No criteria

&lt; = Parameter below detection limit

0.0 = Field Duplicate of MW 10-1, First Sampling Event

DUP-02 = Field Duplicate of MW 10-1, Second Sampling Event

DUP-A= Field Duplicate of MW 10-1A

DUP-03= Field Duplicate of MW 93-1A

DUP-05 = Field Duplicate of MW 10-1

DUP-07 = Field Duplicate of MW 10-1

(1)=Elevated RDL for analyzed VOC(s)

= above criteria

## Notes:

Analysis completed by Maxxam Analytics Inc. laboratory in St. John's, NL.

\* Ontario Ministry of Environment (MOE) "Soil, Ground Water and Sediment Standards for Use Under Part XV.1 of the Environmental Protection Act", April 15, 2011, Table 3: Full Depth Generic Site Condition Standards in a Non-Potable Ground Water Condition

RDL = Reportable Detection Limit

0.0 = above criteria

- = Not analysed/No criteria

(2)= Reporting limit was increased due to turbidity

&lt;#( = Parameter below AMEC laboratory detection limit

DUP-01 = Field Duplicate of MW 10-1, First Sampling Event

DUP-02 = Field Duplicate of MW 10-1, Second Sampling Event

DUP-03= Field Duplicate of MW 93-1A

DUP-05= Field Duplicate of MW 10-1

## Notes:

1, 2 Atlantic RBCA Ecological Tier I EQSs for groundwater based on &gt;10m from a surface water body with discharge to a fresh water and/or marine water (July 2021, updated July 2022).

- = No applicable guideline or parameter not defined.

Value <sup>x</sup> Exceeds Fresh Water or Marine criteria reference below.

## Notes:

1,2 Atlantic RBCA Ecological Tier I Environmental Quality Standards (EQSs) for Surface Water, Discharge to Fresh Water and/or Marine Water (July 2021, updated July 2022).

<sup>3</sup> Newfoundland and Labrador Regulation 65/03, Environmental Control Water and Sewage Regulations (2003) under the Water Resources Act (O.C. 2003-231), Schedule A (discharge into a body of water).

NG = For Tier I EQS, Health Canada AO and OG values are excluded from consideration, as such No Guideline (NG) is indicated.

- = No applicable guideline or parameter not defined.

<b>Value</b>	Exceeds Fresh Water and Marine criteria reference below.
<b>Value</b>	Exceeds Fresh Water or Marine criteria reference below.
<b>Value</b>	Exceeds NL 65/03 Schedule A Regulations.
<b>Value</b>	Exceeds Fresh Water and Marine criteria and NL 65/03 Schedule A Regulations reference below.
