# Executive Summary

The 2022-2023 Monitoring and Maintenance Program has been conducted by Englobe Corp. (Englobe) at the property identified as the Upper Trinity (New Harbour) Waste Disposal Site property located on Route 73, approximately 5 km from the junction of Route 80 and Route 73 in the community of New Harbour, Newfoundland and Labrador (NL) (herein referred to as ‘the site’). The purpose of the work was to conduct one groundwater and surface water sampling event at the site, inspect the monitor wells, and leachate control system and address outstanding maintenance issues that have been identified for the site.

The monitoring program was conducted on January 5, 2023 and included groundwater monitoring and sampling of eight existing monitor wells as well as the collection of surface water samples from three locations on and/or near the site.

Analytical results for petroleum hydrocarbons (PHCs), polychlorinated biphenyls (PCBs), metals and general chemistry parameters were compared to the 2021 Atlantic Risk-Based Correction Action (RBCA) Version 4 Human Health-Based and Ecological Tier I Environmental Quality Standards (EQS) (updated July 2022) for groundwater >10 m from a surface water body and discharging into fresh water with coarse-grained soil and a non-potable groundwater supply.

The results of the 2022/2023 monitoring and maintenance program are summarized as follows:

- Seven of the eight existing monitor wells were located and sampled including MW-02 to MW-04, MW-05A and MW-06 to MW-08 and two surface water samples were collected including one from the site’s leachate collection pond (i.e., SW-POND) and a stream located upgradient (i.e., SW-UPSTREAM) of the site;
- Access to MW-01 was not possible during the site visit due to standing water located in the area;
- A sample of the surface water at the downstream sampling location (i.e., SW-DOWNSTREAM) was not possible due to ice cover in the stream;
- The depths to groundwater in the monitor wells ranged from ground surface (i.e., 1.05 metres below ground surface (mbgs) in monitor well MW-04 to 2.55 mbgs in monitor well MW-02);
- Concentrations of aluminum and iron in the eight groundwater samples and aluminum, iron, copper, lead and/or zinc in the three surface water samples exceeded the applicable Ecological Health Tier I EQSs. Detected concentrations of aluminum and iron in groundwater and surface water may be the result of background soil condition and thus, are not considered to be an environmental concern in the tested areas of the site;
- PCB concentrations were not detected above the laboratory’s standard reportable detection limit in the groundwater or surface water samples collected during the current assessment. It should be noted that although PCB concentrations were below the detection limits for both surface water samples collected, regulatory guidance criteria for PCBs in the Tier I Ecological EQSs for the protection of freshwater is lower than the current detection limit (i.e., 0.001 µg/L);
- The pH in surface water sample SW-UPSTREAM (5.83) was reported to be outside the Tier I EQS pH range of 6.5 - 9.0;
- Some metals (i.e., cobalt, iron, manganese, nickel, barium, cadmium, copper and lead) present in monitor well MW-04 were identified to have elevated concentrations in 2023. Future results should be reviewed to ensure no trends of increased metals concentrations are identified given this monitor well is inferred to be down-gradient of the landfill;

- Englobe conducted an inspection of the monitor wells on January 5, 2023 and noted that the casings for the monitor wells were loose in the ground and the hinge of the casing of MW-07 was broken. Repairs to the monitor wells protective casings including resealing the bases and replacement of the casing could not be conducted at the time of the site visit due to frozen ground conditions and colder temperatures encountered at the site. Englobe will complete these repairs and provide a summary document under separate cover; and,
- Historical data from 2007-2017, 2021 and 2022 groundwater and surface water quality results are consistent in terms of metal and general chemistry parameters detected during some or all sampling events.

Based on the available environmental data, no unacceptable risks to human and/or ecological receptors are anticipated at the site under current site conditions.

However, some considerations with respect to future operations of the site are outlined below:

- Continue to conduct annual groundwater and surface water monitoring and sampling in 2023/2024 to confirm groundwater and surface water quality at the site and down-gradient of the site. Conduct a trend analysis of the historical data using the updated groundwater and surface water quality data;
- Complete a groundwater level survey of the monitor wells to determine actual groundwater flow direction on the site; and,
- Continue to complete an inspection of monitor wells and the leachate control system including slopes of waste landfill for signs of damage or natural degradation.

## Property and Confidentiality

"This report can only be used for the purposes stated therein. Any use of the report must take into consideration the object and scope of the mandate by virtue of which the report was prepared, as well as the limitations and conditions specified therein and the state of scientific knowledge at the time the report was prepared. Englobe Corp. provides no warranty and makes no representations other than those expressly contained in the report.

This document is the work product of Englobe Corp. Any reproduction, distribution or adaptation, partial or total, is strictly forbidden without the prior written authorization of Englobe Corp. and its Client. For greater certainty, use of any and all extracts from the report is strictly forbidden without the written authorization of Englobe Corp. and its Client, given that the report must be read and considered in its entirety.

No information contained in this report can be used by any third party without the prior written authorization of Englobe Corp. and its Client. Englobe Corp. disclaims any responsibility or liability for any unauthorized reproduction, distribution, adaptation or use of the report.

If tests have been carried out, the results of these tests are valid only for the sample described in this report.

Englobe Corp.'s subcontractors who have carried out on-site or laboratory work are duly assessed according to the purchase procedure of our quality system. For further information, please contact your project manager."

# 1 Introduction

Englobe Corp. (Englobe) was retained by the Province of Newfoundland and Labrador's Department of Environment and Climate Change (ECC) to undertake the 2022/2023 Monitoring and Maintenance Program at the former Upper Trinity South (New Harbour) Waste Disposal Site located in New Harbour, Newfoundland and Labrador (hereafter referred to as the "site"). The purpose of the work was to conduct one groundwater and surface water sampling event at the site, inspect the monitor wells and leachate control system and address outstanding maintenance issues that have been previously identified for the site.

The 2022/2023 Monitoring and Maintenance Program was based on accepted environmental site assessment standards including those published by the Canadian Council of Ministers of the Environment (CCME) and followed ECC developed operating procedures and guidance.

## 2 Background

### 2.1 Site Background

Historically, the site operated as a domestic waste disposal site from the early 1970s until November 2009. The site accepted waste from the surrounding communities of Blaketown, Dildo, Green's Harbour, Hopeall, Markland, New Harbour, Old Shop, South Dildo, and from the Towns of Bay Roberts and Cupids.

During the operational period, the site was managed by a local contractor who collected waste from residents and businesses in the area and disposed of the material in excavated cells or pits. Waste was also delivered to the site by private individuals and businesses; however, the waste delivered by private sources was often placed on the ground and not within excavated pits or cells. Historically, open burning of refuse was a common practice carried out at the site to help reduce the volume of waste and to control pests.

In addition to municipal solid waste disposed at the site, a quantity of low-level polychlorinated biphenyls (PCB)-impacted scrap metal and transformer casings originating from the Makinson's scrap yard were disposed on the northwest area of the site from 1992 to 1995. The site was also used by a local seal processing plant to dispose of seal pelt trim and fat, sawdust and sludge. A smaller portion of the site was used for metals disposal, including car wrecks and bulk items.

The waste disposal site was constructed as an unlined site and potential leachate impacts were not effectively managed until the construction of interception ditches and a leachate collection pond in 2006 and 2007. In addition, seven monitor wells (MW-01 to MW-07) were installed around the perimeter of the waste disposal site to monitor potential leachate impacts in groundwater and one monitor well (MW-08) was installed up-gradient of the waste disposal site to monitor background concentrations for comparison purposes. One monitor well (MW-05A) was installed in 2013 to replace MW-05, which was damaged and reported as having heavy siltation. Monitoring of groundwater and surface water quality has been ongoing since 2007.

Closure activities at the site in 2011 and 2012 included compaction and grading as well as the placement of an interim cover consisting of locally available fill to facilitate consolidation and settling of

the municipal solid waste. In 2013, a final soil cover was placed over the entire site along with an engineered cap liner system over the PCB-impacted area. The on-site infrastructure and access routes were removed, and a soil berm was installed to block the view of the site from Route 73. Signage was installed indicating the site as a former landfill and that no trespassing is permitted.

The Post-Decommissioning Monitoring and Maintenance Program Plan developed by AMEC Earth and Environmental in March of 2011, was developed in accordance with Section 7.5.4 of the Department of Environment and Conservation's Guidance Document "Environmental Standards for Municipal Solid Waste Landfill Sites", GD-PPD049.1 and includes: groundwater monitoring, surface water monitoring, leachate system monitoring and the monitoring and maintenance of settlement and final cover of the site.

## 2.2 Previous Environmental Reports

Fourteen previous environmental reports prepared for the subject property were provided by ECC within the Request for Proposal (RFP) and reviewed as part of the assessment.

- Removal of PCB-Impacted Material, Upper Trinity South Waste Disposal Facility, New Harbour, NL. Prepared by AMEC dated January 2, 2011 (AMEC Project No. TF1012730);
- Closure Plan Upper Trinity South (New Harbour) Waste Disposal Site. Prepared by AMEC Earth and Environmental, dated March 2011 (AMEC Reference No. TF1112731);
- Completion Report for Grading, Compaction and Interim Cover of Former Upper Trinity South waste Disposal Site, New Harbour, NL. Prepared by AMEC Earth and Environmental, dated March 2012 (AMEC Project No. TF1112732);
- 2011 - 2012 Annual Report of Activities Upper Trinity South (New Harbour) Waste Disposal Site. Prepared by SNC Lavalin, dated July 2012 (Ref. No. 723162);
- Surface Water and Sediment Sampling Report, Three Corner Pond and Denny's Pond, Upper Trinity South (New Harbour) Waste Disposal Site. Prepared SNC-Lavalin Inc., dated October 2012 (Project No. 508907-0001);
- Test Pitting and Soil Sampling Program, PCB Disposal Area, Upper Trinity South (New Harbour), Waste Disposal Site at New Harbour Barrens, NL. Prepared by AMEC, dated February 28, 2013 (AMEC Project No. TF1312736);
- 2012 - 2013 Annual Report of Activities Upper Trinity South (New Harbour) Waste Disposal Site. Prepared by AMEC Earth and Environmental, dated March 29, 2013 (Ref. No. TF1212735);
- Completion Report for Maintenance of Interim Soil Cover for Upper Trinity South (New Harbour) Waste Disposal Site, New Harbour, NL. Prepared by AMEC Environment & Infrastructure a Division of AMEC Americas Limited, dated May 2013 (AMEC Project No. TF1212734);
- Human Health and Ecological Risk Assessment of the PCB Area at the Upper Trinity South (New Harbour) Waste Disposal Site, New Harbour Barrens, Newfoundland and Labrador. Prepared by Dillion Consulting Limited, dated July 2013 (Project No. 13-7515-1000);
- 2013/2014 Monitoring and Maintenance Program, Upper Trinity South (New Harbour) Waste Disposal Site, New Harbour Barrens, Newfoundland and Labrador. Prepared by CRA, dated January 2014 (Ref. No. 084308(4));
- 2014/2015 Monitoring and Maintenance Program, Upper Trinity South (New Harbour) Waste Disposal Site, New Harbour Barrens, Newfoundland and Labrador. Prepared by CRA, dated February 2015 (Ref. No. 084308(7));

- 2015-16 Monitoring and Maintenance Program, Upper Trinity South (New Harbour) Waste Disposal Site, New Harbour Barrens, Newfoundland and Labrador. Prepared by Fracflow Consultants Inc., dated June 2016 (FFC File No. 3073N);
- 2017 - 2018 Monitoring Program, Upper Trinity South (New Harbour) Waste Disposal Site, New Harbour Barrens, Newfoundland and Labrador. Prepared by GHD, dated May 2018 (Ref. No. 084308(10)); and,
- 2021 - 2022 Monitoring and Maintenance Program, Upper Trinity South (New Harbour) Waste Disposal Site, New Harbour, NL. Prepared by Strum Consulting, dated March 31, 2022 (Project No. 21-8365).

## 3 Scope of Work

The scope of work for the Maintenance and Monitoring Program is as follows:

- Review previous environmental reports completed for the site as provided by ECC;
- Locate (where possible with visual inspection and reasonable effort) the existing monitoring wells at the site. Conduct a water level and free product survey in each of the monitoring wells identified at the site using an electronic interface meter to determine the depth to and thickness of free product;
- Complete inspection of monitor well and leachate control system;
- Collect and submit selected groundwater samples to ALS Laboratories in Dartmouth, NS for analysis of dissolved metals including mercury and polychlorinated biphenyls (PCBs);
- Collect and submit selected surface water samples to ALS Laboratories in Dartmouth, NS for analysis of total metals including mercury, PCBs and general chemistry;
- Comparing analytical results to the commercial guidelines;
- Repair loose casings on monitor wells MW-01, MW-03, MW-06, MW-07 and MW-08 as well as replace the j-plug of MW-06;
- Replace missing ‘No Trespassing / No Dumping’ sign with steel posts or pressure treated wood; and,
- Prepare a report from the site detailing the scope of work, methodology, findings, and recommendations as warranted.

## 4 Property Description

### 4.1 Site Description

The site is located on Route 73, approximately 5 km from the junction of Route 80 and Route 73, in the community of New Harbour, NL. The site has an approximate area of 4.5 hectares and is located on land zoned as ‘dump buffer site’ by Digital Government and Service NL (DGSNL). Site photographs are provided in Appendix A and a general Site Location Map, Figure 2.1 indicates the site's approximate extent for this investigation.

Figure 4-1 - Site Location Map - Route 73, New Harbour Barrens, NL

Image source: ECC Request for Proposal.

The area surrounding the waste disposal site is comprised mostly of vacant, undeveloped dense forest with numerous wetlands (bogs, ponds, streams, etc.).

## 4.2 Geology, Hydrology and Hydrogeology

The following information has been obtained from available provincial mapping:

**Surficial deposits:** Based on our review of publicly available surficial geological maps and our previous experience from other investigations near this site, the site's surficial geology at the site placed below the fill material comprises thin glacial deposits and/or poorly drained accumulations of peat, peat moss or other organic material over bedrock that is concealed by vegetation.

**Bedrock:** Based on publicly available bedrock mapping of the area, bedrock at the site is mapped as consisting of thickly bedded, light-grey sandstone with locally thin bedded, greenish-grey to red sandstone. Siltstone, tuff and conglomerate of the Gibbett Hill Formation of the Signal Hill Group.

**Hydrogeology:** Groundwater flow in the area is expected to vary, but to be generally to the west towards Denny's Pond located approximately 1.6 km from the southwestern boundary line of the site. Surface drainage at the site appears to follow the general slope of the property, which is engineered to flow downward towards the southwest towards the leachate collection pond.

# 5 Assessment Methodology

## 5.1 Groundwater Sampling

Englobe personnel were on-site on January 5, 2023, to collect groundwater samples from eight monitoring wells, including MW-01 to MW-08. Prior to sampling, static groundwater levels were measured at each monitoring well using a Solinst interface probe and were verified for the presence of free phase petroleum product. Each well was developed by purging a minimum of three well casing volumes using dedicated bailers. After allowing sufficient time for groundwater recovery, groundwater samples were collected from the monitor wells using dedicated bailers and placed in laboratory supplied bottles and vials (with preservative as necessary).

Samples were then placed in a secure ice-packed cooler until delivery to the laboratory. Groundwater samples were submitted to ALS Laboratories (ALS) in Dartmouth, NS for analysis of metals and polychlorinated biphenyls (PCBs). ALS is certified by the Standards Council of Canada (SCC). Where applicable, analyses were performed in accordance with the protocols stipulated in the Atlantic RBCA Guidelines for Laboratories, Version 3.1, May 2016.

The locations of all monitor wells are shown on Figure 1 of Appendix B. Information from the groundwater sampling program is presented in Tables 1 and 2 of Appendix C.

## 5.2 Surface Water Sampling

On January 5, 2023, surface water samples were collected from the two sampling locations during the sampling event. Samples were collected from the leachate pond (SW-POND) and the stream upgradient of the site (SW-UPSTREAM). A sample was not collected from the stream located downgradient of the site (SW-DOWNSTREAM) due to stream surface being frozen at the time of the site visit. Analytical data from the surface water-sampling program is presented in Tables 3 to 5 of Appendix C.

Surface water samples were collected directly into laboratory supplied bottles and vials (with preservative as necessary). Samples were collected by positioning the laboratory supplied sampling bottles into the water column at an approximate depth of 0 - 0.15 m below the water's surface. Caution was used to prevent the bottles from disturbing the sediment on the bottom of the pond and stream. Samples were maintained in secure ice-packed cooler and transported to the laboratory for analysis. The surface water samples collected were submitted for analysis of metals, PCBs and general chemistry parameters. The surface water sampling locations are shown on Figure 1 of Appendix B.

# 6 Assessment Standards

Based on past usage (waste disposal site), the site is classified as a commercial property. Site soils are coarse-grained and groundwater resources are not used as a potable water source and therefore considered to be non-potable.

The applicable exposure pathways for natural areas could vary considerably among different sites due to differences, for example, in resident wildlife species or consumption of country foods by residents. As a result, both human health-based and ecological standards are applicable to the site.

As such, analytical results were compared to Atlantic Risk-Based Correction Action (RBCA) Tier I Human Health and Ecological Environmental Quality Guidelines (EQSs) for groundwater >10 m from a surface water body and discharging into fresh water are applicable (Version 4.0, July 2021, updated July 2022).

# 7 Results

## 7.1 Hydrogeologic Assessment

On, January 5, 2023, Englobe completed a hydrogeologic assessment by measuring the groundwater depths in each groundwater well. Table 7-1 presents the results of the static groundwater measurements.

**Table 7-1- Summary of Groundwater Depths**

Well ID	Depth of Water (mbgs)	Depth of Free Product (mbgs)
MW-01	-	-
MW-02	2.55	NP
MW-03	1.10	NP
MW-04	1.05	NP
MW-05A	1.85	NP
MW-06	1.15	NP
MW-07	1.35	NP
MW-08	2.08	NP

Notes: MW-01 was not measured due to access restrictions of high volume of surface water in the area.

NP - Not Present

## 7.2 Samples Submitted

In total ten water samples including seven groundwater plus one field duplicate, and two surface water samples were submitted for chemical analysis.

Details of the analysis performed on each sample can be found in Table 7-2, below. The locations of the wells and surface water sample locations are shown on Figure 1, Appendix B.

**Table 7-2 - Summary of Samples Submitted**

Sample ID	Location(s)	Analysis
MW2	MW-02	Metals (dissolved) and PCBs.
MW2-DUP	MW-02	Metals (dissolved) and PCBs.
	MW-03	Metals (dissolved) and PCBs.
MW4	MW-04	Metals (dissolved) and PCBs.
	MW-05A	Metals (dissolved) and PCBs.
MW6	MW-06	Metals (dissolved) and PCBs.
	MW-07	Metals (dissolved) and PCBs.
MW8	MW-08	Metals (dissolved) and PCBs.
	SW-UPSTREAM	Metals (total), PCBs, and General Chemistry.
SW-POND	SW-POND	Metals (total), PCBs, and General Chemistry.

Laboratory analytical results are included in Tables 1 to 5 of Appendix C and discussed below. The laboratory certificates are included in Appendix D.

## 7.3 Groundwater Results

### 7.3.1 Dissolved Metals

Eight groundwater samples (including a field duplicate sample) were analyzed for metals. Metal exceedances of the Tier I EQSs for human and/or ecological health were identified as follows:

- Aluminum in monitor wells MW2, MW3, MW7, MW8 and the field duplicate; and,
- Cadmium, Cobalt and Zinc in monitor well MW4.

Where detected, all other metal concentrations were below the applicable Tier I EQSs.

Metal analytical results for all groundwater samples analyzed are summarized in Table 1, Appendix C.

### 7.3.2 PCBs in Groundwater

Eight groundwater samples (including a field duplicate sample) were analyzed for PCB analysis. Laboratory analytical results are included in Table 2 of Appendix C. The laboratory certificates are included in Appendix D.

The PCB parameters reported non-detectable concentrations for all submitted groundwater samples, thus, satisfying the applicable Human Health-Based and Ecological Tier I EQSs.

## 7.4 Surface Water Results

### 7.4.1 Metals in Surface Water

Two surface water samples were analyzed for metals. Metal exceedances of the Tier I EQSs for ecological health were identified as follows:

- Aluminum in surface water samples SW-UPSTREAM and SW-POND; and,
- Iron and Lead in surface water sample SW-UPSTREAM.

Where detected, all other metal concentrations were below the applicable Tier I EQSs.

Metal results for all surface water samples analyzed are summarized in Table 3, Appendix C.

It is our opinion that the elevated concentrations of these metals are not evidence of anthropogenic contamination.

### 7.4.2 PCBs in Surface Water

Two surface water samples were analyzed for PCB analysis. Laboratory analytical results are included in Table 4 of Appendix C. The laboratory certificates are included in Appendix D.

The PCB parameters reported non-detectable concentrations for all submitted surface water samples, thus, satisfying the applicable Human Health-Based and Ecological Tier I EQSs.

### 7.4.3 General Chemistry in Surface Water

Two surface water samples were submitted for general chemistry analysis. Laboratory analytical results are included in Table 5 of Appendix C. The laboratory certificates are included in Appendix D.

The general chemistry parameters were reported to range from non-detectable to detectable concentrations which satisfy the applicable Ecological based Tier I EQSs, with the exception of the pH parameter.

The parameter of pH in the stream located upgradient from the site (i.e., SW-UPSTREAM) was reported to be 5.83 which is lower than acceptable range for pH under the Ecological based Tier I EQSs.

## 7.5 Inspection of Monitor Well and Waste Disposal Area

Englobe conducted a visual inspection of the site infrastructure and groundwater monitor wells during the site visit conducted on January 5, 2023.

The following items were noted:

- The hinge of monitor well MW07 was broken on the protective casing and requires replacement;
- The leachate ditch system and collection pond were observed to be in good condition with no signs of blockages or erosion;
- Casings of the monitor wells were loose in the ground; and,
- The ‘No Trespassing / No Dumping” should be reinstalled.

Englobe will complete the necessary repairs and installations and provide a summary document under a separate cover.

## 7.6 Quality Assurance/Quality Control

Englobe conducted the environmental sampling following standard operating procedures, including job procedures and safe work practices. The sampling was conducted in accordance with all pertinent acts, regulations, codes, guidelines, and standard practices.

All groundwater and surface water samples were logged by Englobe personnel and submitted under chain of custody to ALS. ALS conducts their own internal QA/QC programs consistent with relevant standards and requirements for laboratory certification. The measured values and recoveries are compared to acceptable lower and upper limits. ALS's QA/QC results were reviewed by Englobe and were found to be within acceptable limits and details can be found on the laboratory certificates in Appendix D.

Based on the results of the QA/QC program, the analytical results are considered reliable and acceptable.

## 7.7 Discussion

Based on the results of the 2022-2023 monitoring sampling event, observations, information gathered, and historical laboratory analytical data obtained during previous sampling events completed at the site, the following environmental information has been used to determine the potential for trends. As guidance criteria has been updated since the initial analytical data was reviewed, a direct comparison of exceedances observed from data collected from 2007 to 2017 could not be made with the two most recent programs. Historical analytical data prior to 2021 was compared to the MOE Guidelines for Full Depth Generic Site Condition Standards and the CCME CWQGs, while data collected during monitoring programs completed since 2021 has been compared to the Atlantic RBCA - User Guidance (Version 4.0, July 2021, updated July 2022).

### 7.7.1 Groundwater

Concentrations of PCBs have reported to be non-detect since the initial groundwater monitoring event conducted in 2007.

The historical 2007-2017, 2021 and 2022 groundwater quality results are consistent in terms of metals detected during some or all sampling events. Current and historical concentrations of aluminum have been reported to exceed the applicable guidelines; however, based on the reported concentration observed within the background sample (i.e., MW-08) this is likely due to background levels associated with the ground and subsurface conditions of the area and not likely due to influence from the landfill. Other metals (i.e., Cobalt, Copper, Cadmium, Lead and Mercury) have reported exceedances of the applicable guidelines; however, associated trends cannot be identified due to the annual variability of the identified exceedances year to year. Historical data of mercury identified exceedances from four of the monitor wells in the years 2009 and 2010; however, although concentrations have fluctuated, exceedances of mercury have not been identified since 2010.

Some metals present in groundwater in monitor well MW-04 were identified to have elevated concentrations in 2023 compared to previous years. As this monitor well is inferred to be down-gradient of the landfill, future results should be reviewed to ensure no trends of increased metal concentrations are identified.

## 7.7.2 Surface Water

Concentrations of PCBs have reported to be non-detect since the initial surface water monitoring event conducted in 2007.

The historical 2007-2017, 2021 and 2022 surface water quality results are consistent in terms of metals detected during some or all sampling events. Current and historical concentrations of aluminum have been reported to exceed the applicable guidelines; however, based on the reported concentration observed within the background sample (i.e., SW-UPSTREAM) this is likely due to background levels associated with the ground and subsurface conditions of the area and not likely due to influence from the landfill. Various other metals (i.e., Copper and Iron) have reported exceedances of the applicable guidelines; however, the identified exceedances are variable and therefore potential trends are not able to be extrapolated.

Based on historical surface water data, surface water quality at the upstream location (i.e., SW-UPSTREAM) and at the downstream location (i.e., SW-DOWNSTREAM) has remained consistent except for some seasonal elevated concentrations of individual parameters. Historical surface water data from the sample collected from the pond (i.e., SW-POND) located on the southwest portion of the site indicated historical exceedances of the parameter 'Nitrite as N'; however, data shows a decline in concentration to non-detectable levels since the 2013 monitoring event. In addition, historical trends indicate pH concentrations in the upstream sample (i.e., SW-UPSTREAM) have been below the applicable guideline since 2014. Prior to 2014, no sampling occurred upstream.

# 8 Conclusion and Recommendations

The results of the 2022/2023 monitoring and maintenance program are summarized as follows:

- Seven of the eight existing monitor wells were located and sampled including MW-02 to MW-04, MW-05A and MW-06 to MW-08 and two surface water samples were collected including one from the site's leachate collection pond (i.e., SW-POND) and a stream located upgradient (i.e., SW-UPSTREAM) of the site;
- Access to MW-01 was not possible during the site visit due to standing water located in the area;
- A sample of the surface water at the downstream sampling location (i.e., SW-DOWNSTREAM) was not possible due to ice cover in the stream;
- The depths to groundwater in the monitor wells ranged from ground surface (i.e., 1.05 metres below ground surface (mbgs) in monitor well MW-04 to 2.55 mbgs in monitor well MW-02);
- Concentrations of aluminum and iron in the eight groundwater samples and aluminum, iron, copper, lead and/or zinc in the three surface water samples exceeded the applicable Ecological Health Tier I EQSs. Detected concentrations of aluminum and iron in groundwater and surface water may be the result of background soil condition and thus, are not considered to be an environmental concern in the tested areas of the site;
- PCB concentrations were not detected above the laboratory's standard reportable detection limit in the groundwater or surface water samples collected during the current assessment. It should be noted that although PCB concentrations were below the detection limits for both surface water

samples collected, regulatory guidance criteria for PCBs in the Tier I Ecological EQSs for the protection of freshwater is lower than the current detection limit (i.e., 0.001 µg/L);

- The pH in surface water sample SW-UPSTREAM (5.83) was reported to be outside the Tier I EQS pH range of 6.5 - 9.0;
- Some metals present in monitor well MW-04 were identified to have elevated concentrations in 2023. Future results should be reviewed to ensure no trends of increased metals concentrations are identified given this monitor well is inferred to be down-gradient of the landfill;
- Englobe conducted an inspection of the monitor wells on January 5, 2023 and noted that the casings for the monitor wells were loose in the ground and the hinge of the casing of MW-07 was broken. Repairs to the monitor wells protective casings including resealing the bases and replacement of the casing could not be conducted at the time of the site visit due to frozen ground conditions and colder temperatures encountered at the site. Englobe will complete these repairs and provide a summary document under separate cover; and,
- Historical data from 2007-2017, 2021 and 2022 groundwater and surface water quality results are consistent in terms of metal and general chemistry parameters detected during some or all sampling events.

Based on the available environmental data, no unacceptable risks to human and/or ecological receptors are anticipated at the site under current site conditions.

However, some considerations with respect to future operations of the site are outlined below:

- Continue to conduct annual groundwater and surface water monitoring and sampling in 2023/2024 to confirm groundwater and surface water quality at the site and down-gradient of the site. Conduct a trend analysis of the historical data using the updated groundwater and surface water quality data;
- Complete a groundwater level survey of the monitor wells to determine actual groundwater flow direction on the site; and,
- Continue to complete an inspection of monitor wells and the leachate control system including slopes of waste landfill for signs of damage or natural degradation.

## 9 Report Use and Conditions

This report was prepared for the exclusive use of Newfoundland and Labrador Department of Environment and Climate Change and is based on data and information obtained during a site visit by Englobe on the subject property; and is based solely upon the condition of the property on the date of such inspection, supplemented by information obtained and described herein.

The evaluation and conclusions contained in this report have been prepared in light of the expertise and experience of Englobe Corp. In evaluating the property, Englobe has relied in good faith upon representation and information furnished by individuals noted in the report with respect to operations and existing property conditions and the historic use of the property to the extent that they have not been contradicted by data obtained by other sources. Accordingly, Englobe accepts no responsibility for any deficiency or inaccuracy in this report as a result of omissions, misstatements or misrepresentations of the persons interviewed. In addition, Englobe will not accept liability for loss, injury, claim or damage arising from any use or reliance on this report as a result of misrepresentation or fraudulent information.

Environmental conditions are dynamic in nature and changing circumstances in the environment and in the use of the property can alter radically the conclusions and information contained herein.

Greg Pokocky	Supervisor - Inorganic	Metals, Waterloo, Ontario

## General Comments

The analytical methods used by ALS are developed using internationally recognized reference methods (where available), such as those published by US EPA, APHA Standard Methods, ASTM, ISO, Environment Canada, BC MOE, and Ontario MOE. Refer to the ALS Quality Control Interpretive report (QCI) for applicable references and methodology summaries. Reference methods may incorporate modifications to improve performance.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

Additional information pertinent to this report will be found in the following separate attachments: Quality Control Report, QA/QC Compliance Assessment to assist with Quality Review and Sample Receipt Notification.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Application of guidelines is provided "as is" without warranty of any kind, either expressed or implied, including, but not limited to fitness for a particular purpose, or non-infringement. ALS assumes no responsibility for errors or omissions in the information. Guidelines are not adjusted for the hardness, pH or temperature of the sample (the most conservative values are used). Measurement uncertainty is not applied to test results prior to comparison with specified criteria values.

Key : LOR: Limit of Reporting (detection limit).

Unit	Description
-	no units
%	percent
µg/L	micrograms per litre
µS/cm	microsiemens per centimetre
CU	colour units (1 cu = 1 mg/l pt)
meq/L	milliequivalents per litre
mg/L	milligrams per litre
NTU	nephelometric turbidity units
pH units	pH units

>: greater than.

<: less than.

Red shading is applied where the result is greater than the Guideline Upper Limit or the result is lower than the Guideline Lower Limit.

For drinking water samples, Red shading is applied where the result for E.coli, fecal or total coliforms is greater than or equal to the Guideline Upper Limit .

## Qualifiers

Qualifier	Description
DLDS	<i>Detection Limit Raised: Dilution required due to high Dissolved Solids / Electrical Conductivity.</i>
DLHC	<i>Detection Limit Raised: Dilution required due to high concentration of test analyte(s).</i>
PEHT	<i>Parameter exceeded recommended holding time prior to analysis.</i>
RRR	<i>Refer to report comments for issues regarding this analysis.</i>

Greg Pokocky	Supervisor - Inorganic	Waterloo Metals, Waterloo, Ontario

## General Comments

The ALS Quality Control (QC) report is optionally provided to ALS clients upon request. ALS test methods include comprehensive QC checks with every analysis to ensure our high standards of quality are met. Each QC result has a known or expected target value, which is compared against predetermined Data Quality Objectives (DQOs) to provide confidence in the accuracy of associated test results. This report contains detailed results for all QC results applicable to this sample submission. Please refer to the ALS Quality Control Interpretation report (QCI) for applicable method references and methodology summaries.

### Key :

Anonymous = Refers to samples which are not part of this work order, but which formed part of the QC process lot.

CAS Number = Chemical Abstracts Service number is a unique identifier assigned to discrete substances.

DQO = Data Quality Objective.

LOR = Limit of Reporting (detection limit).

RPD = Relative Percent Difference

# = Indicates a QC result that did not meet the ALS DQO.

## Workorder Comments

Holding times are displayed as "—" if no guidance exists from CCME, Canadian provinces, or broadly recognized international references.

## Laboratory Duplicate (DUP) Report

A Laboratory Duplicate (DUP) is a randomly selected intralaboratory replicate sample. Laboratory Duplicates provide information regarding method precision and sample heterogeneity. ALS DQOs for Laboratory Duplicates are expressed as test-specific limits for Relative Percent Difference (RPD), or as an absolute difference limit of 2 times the LOR for low concentration duplicates within ~ 4-10 times the LOR (cut-off is test-specific).

Sub-Matrix: Water

## Method Blank (MB) Report

A Method Blank is an analyte-free matrix that undergoes sample processing identical to that carried out for test samples. Method Blank results are used to monitor and control for potential contamination from the laboratory environment and reagents. For most tests, the DQO for Method Blanks is for the result to be < LOR.

## Laboratory Control Sample (LCS) Report

A Laboratory Control Sample (LCS) is an analyte-free matrix that has been fortified (spiked) with test analytes at known concentration and processed in an identical manner to test samples. LCS results are expressed as percent recovery, and are used to monitor and control test method accuracy and precision, independent of test sample matrix.

Sub-Matrix: Water

## Matrix Spike (MS) Report

A Matrix Spike (MS) is a randomly selected intra-laboratory replicate sample that has been fortified (spiked) with test analytes at known concentration, and processed in an identical manner to test samples. Matrix Spikes provide information regarding analyte recovery and potential matrix effects. MS DQO exceedances due to sample matrix may sometimes be unavoidable; in such cases, test results for the associated sample (or similar samples) may be subject to bias. ND – Recovery not determined, background level >= 1x spike level.

Sub-Matrix: Water

This report is automatically generated by the ALS LIMS (Laboratory Information Management System) through evaluation of Quality Control (QC) results and other QA parameters associated with this submission, and is intended to facilitate rapid data validation by auditors or reviewers. The report highlights any exceptions and outliers to ALS Data Quality Objectives, provides holding time details and exceptions, summarizes QC sample frequencies, and lists applicable methodology references and summaries.

**Key**

Anonymous: Refers to samples which are not part of this work order, but which formed part of the QC process lot.

CAS Number: Chemical Abstracts Service number is a unique identifier assigned to discrete substances.

DQO: Data Quality Objective.

LOR: Limit of Reporting (detection limit).

RPD: Relative Percent Difference.

---

### Workorder Comments

Holding times are displayed as "----" if no guidance exists from CCME, Canadian provinces, or broadly recognized international references.

---

### Summary of Outliers

#### Outliers : Quality Control Samples

- No Method Blank value outliers occur.
- No Duplicate outliers occur.
- No Laboratory Control Sample (LCS) outliers occur
- Matrix Spike outliers occur - please see following pages for full details.
- Test sample Surrogate recovery outliers exist for all regular sample matrices - please see following pages for full details.

### ***Outliers: Reference Material (RM) Samples***

- No Reference Material (RM) Sample outliers occur.

### ***Outliers : Analysis Holding Time Compliance (Breaches)***

- Analysis Holding Time Outliers exist - please see following pages for full details.

### ***Outliers : Frequency of Quality Control Samples***

- No Quality Control Sample Frequency Outliers occur.

## Outliers : Quality Control Samples

Duplicates, Method Blanks, Laboratory Control Samples and Matrix Spikes

### Matrix: Water

Analyte Group	Laboratory sample ID	Client/Ref Sample ID	Analyte	CAS Number	Method	Result	Limits	Comment
<b>Matrix Spike (MS) Recoveries</b>								
Total Metals	WT2300426-008	SW-UPSTREAM	zirconium, total	7440-67-7	E420	54.6 % <sup>K</sup>	70.0-130%	Recovery less than lower data quality objective

### Result Qualifiers

Qualifier Description

K Matrix Spike recovery outside ALS DQO due to sample matrix effects.

### Regular Sample Surrogates

#### Sub-Matrix: Water

Analyte Group	Laboratory sample ID	Client/Ref Sample ID	Analyte	CAS Number	Result	Limits	Comment
<b>Samples Submitted</b>							
Polychlorinated Biphenyls Surrogates	WT2300426-006	MW7	decachlorobiphenyl	2051-24-3	36.8 %	50.0-140 %	Recovery less than lower data quality objective

## Analysis Holding Time Compliance

This report summarizes extraction / preparation and analysis times and compares each with ALS recommended holding times, which are selected to meet known provincial and /or federal requirements. In the absence of regulatory hold times, ALS establishes recommendations based on guidelines published by organizations such as CCME, US EPA, APHA Standard Methods, ASTM, or Environment Canada (where available). Dates and holding times reported below represent the first dates of extraction or analysis. If subsequent tests or dilutions exceeded holding times, qualifiers are added (refer to COA).

If samples are identified below as having been analyzed or extracted outside of recommended holding times, measurement uncertainties may be increased, and this should be taken into consideration when interpreting results.

Where actual sampling date is not provided on the chain of custody, the date of receipt with time at 00:00 is used for calculation purposes.

Where only the sample date without time is provided on the chain of custody, the sampling date at 00:00 is used for calculation purposes.

Matrix: Water											Evaluation: ✗ = Holding time exceedance ; ✓ = Within Holding Time		
Analyte Group	Container / Client Sample ID(s)	Method	Sampling Date	Extraction / Preparation				Analysis

## Legend & Qualifier Definitions

**EHTR-FM:** Exceeded ALS recommended hold time prior to sample receipt. Field Measurement recommended

EHTR: Exceeded ALS recommended hold time prior to sample receipt.

EHT: Exceeded ALS recommended hold time prior to analysis.

Rec. HT: ALS recommended hold time (see units).

## Quality Control Parameter Frequency Compliance

The following report summarizes the frequency of laboratory QC samples analyzed within the analytical batches (QC lots) in which the submitted samples were processed. The actual frequency should be greater than or equal to the expected frequency.

Matrix: Water

Evaluation: ✗ = QC frequency outside specification; ✓ = QC frequency within specification.

Quality Control Sample Type	Analytical Methods	Method	QC Lot #	Count		Frequency (%)		
				QC	Regular	Actual	Expected	Evaluation
<b>Laboratory Duplicates (DUP)</b>								
Alkalinity Species by Titration		E290	797433	1	3	33.3	5.0	✓
Ammonia by Fluorescence		E298	797442	1	8	12.5	5.0	✓
Chloride in Water by IC		E235.Cl	797431	1	2	50.0	5.0	✓
Colour (Apparent) by Spectrometer		E330	797641	1	9	11.1	5.0	✓

## Methodology References and Summaries

The analytical methods used by ALS are developed using internationally recognized reference methods (where available), such as those published by US EPA, APHA Standard Methods, ASTM, ISO, Environment Canada, BC MOE, and Ontario MOE. Reference methods may incorporate modifications to improve performance (indicated by "mod").

<b>Analytical Methods</b>	<b>Method / Lab</b>	<b>Matrix</b>	<b>Method Reference</b>	<b>Method Descriptions</b>
Conductivity in Water	E100 Waterloo - Environmental	Water	APHA 2510 (mod)	Conductivity, also known as Electrical Conductivity (EC) or Specific Conductance, is measured by immersion of a conductivity cell with platinum electrodes into a water sample. Conductivity measurements are temperature-compensated to 25°C.
pH by Meter	E108 Waterloo - Environmental	Water	APHA 4500-H (mod)	pH is determined by potentiometric measurement with a pH electrode, and is conducted at ambient laboratory temperature (normally $20 \pm 5^\circ\text{C}$ ). For high accuracy test results, pH should be measured in the field within the recommended 15 minute hold time.
Turbidity by Nephelometry	E121 Waterloo - Environmental	Water	APHA 2130 B (mod)	Turbidity is measured by the nephelometric method, by measuring the intensity of light scatter under defined conditions.
TDS by Gravimetry	E162 Waterloo - Environmental	Water	APHA 2540 C (mod)	Total Dissolved Solids (TDS) are determined by filtering a sample through a glass fibre filter, with evaporation of the filtrate at $180 \pm 2^\circ\text{C}$ for 16 hours or to constant weight, with gravimetric measurement of the residue.
Chloride in Water by IC	E235.Cl Waterloo - Environmental	Water	EPA 300.1 (mod)	Inorganic anions are analyzed by Ion Chromatography with conductivity and/or UV detection.
Fluoride in Water by IC	E235.F Waterloo - Environmental	Water	EPA 300.1 (mod)	Inorganic anions are analyzed by Ion Chromatography with conductivity and/or UV detection.
Nitrite in Water by IC	E235.NO2 Waterloo - Environmental	Water	EPA 300.1 (mod)	Inorganic anions are analyzed by Ion Chromatography with conductivity and/or UV detection.
Nitrate in Water by IC	E235.NO3 Waterloo - Environmental	Water	EPA 300.1 (mod)	Inorganic anions are analyzed by Ion Chromatography with conductivity and/or UV detection.
Sulfate in Water by IC	E235.SO4 Waterloo - Environmental	Water	EPA 300.1 (mod)	Inorganic anions are analyzed by Ion Chromatography with conductivity and/or UV detection.
Alkalinity Species by Titration	E290 Waterloo - Environmental	Water	APHA 2320 B (mod)	Total alkalinity is determined by potentiometric titration to a pH 4.5 endpoint. Bicarbonate, carbonate and hydroxide alkalinity are calculated from phenolphthalein alkalinity and total alkalinity values.

Analytical Methods				
	Method / Lab	Matrix	Method Reference	Method Descriptions
Ammonia by Fluorescence	E298 Waterloo - Environmental	Water	Method Fialab 100, 2018	Ammonia in water is determined by automated continuous flow analysis with membrane diffusion and fluorescence detection, after reaction with OPA (ortho-phthalaldehyde). This method is approved under US EPA 40 CFR Part 136 (May 2021)
Colour (Apparent) by Spectrometer	E330 Waterloo - Environmental	Water	APHA 2120 C (mod)	<p>Colour (Apparent) is measured in an unfiltered sample spectrophotometrically using the single wavelength method. The colour contribution of settleable solids are not included in the result. This method is intended for potable waters.</p> <p>Colour measurements can be highly pH dependent, and apply to the pH of the sample as received (at time of testing), without pH adjustment.</p>
Dissolved Organic Carbon by Combustion (Low Level)	E358-L Waterloo - Environmental	Water	APHA 5310 B (mod)	Dissolved Organic Carbon (Non-Purgeable), also known as NPOC (dissolved), is a direct measurement of DOC after a filtered (0.45 micron) sample has been acidified and purged to remove inorganic carbon (IC). Analysis is by high temperature combustion with infrared detection of CO <sub>2</sub> . NPOC does not include volatile organic species that are purged off with IC. For samples where the majority of DC (dissolved carbon) is comprised of IC (which is common), this method is more accurate and more reliable than the DOC by subtraction method (i.e. DC minus DIC).
Dissolved Orthophosphate by Colourimetry (Ultra Trace Level 0.001 mg/L)	E378-U Waterloo - Environmental	Water	APHA 4500-P F (mod)	<p>Dissolved Orthophosphate is determined colourimetrically on a sample that has been lab or field filtered through a 0.45 micron membrane filter.</p> <p>Field filtration is recommended to ensure test results represent conditions at time of sampling.</p>
Total metals in Water by CRC ICPMS	E420 Waterloo - Environmental	Water	EPA 200.2/6020B (mod)	<p>Water samples are digested with nitric and hydrochloric acids, and analyzed by Collision/Reaction Cell ICPMS.</p> <p>Method Limitation (re: Sulfur): Sulfide and volatile sulfur species may not be recovered by this method.</p>
Dissolved Metals in Water by CRC ICPMS	E421 Waterloo - Environmental	Water	APHA 3030B/EPA 6020B (mod)	<p>Water samples are filtered (0.45 um), preserved with nitric acid, and analyzed by Collision/Reaction Cell ICPMS.</p> <p>Method Limitation (re: Sulfur): Sulfide and volatile sulfur species may not be recovered by this method.</p>
Total Mercury in Water by CVAAS	E508 Waterloo - Environmental	Water	EPA 1631E (mod)	Water samples undergo a cold-oxidation using bromine monochloride prior to reduction with stannous chloride, and analyzed by CVAAS
Dissolved Mercury in Water by CVAAS	E509 Waterloo - Environmental	Water	APHA 3030B/EPA 1631E (mod)	Water samples are filtered (0.45 um), preserved with HCl, then undergo a cold-oxidation using bromine monochloride prior to reduction with stannous chloride, and analyzed by CVAAS.
PCB Aroclors by GC-MS	E687 Waterloo - Environmental	Water	EPA 8270E (mod)	PCB Aroclors are analyzed by GC-MS

Analytical Methods		Method / Lab	Matrix	Method Reference	Method Descriptions
Hardness (Calculated) from Total Ca/Mg		EC100A Waterloo - Environmental	Water	APHA 2340B	"Hardness (as CaCO <sub>3</sub> ) from total Ca/Mg" is calculated from the sum of total Calcium and Magnesium concentrations, expressed in CaCO <sub>3</sub> equivalents. "Total Hardness" refers to the sum of Calcium and Magnesium Hardness. Hardness is normally or preferentially calculated from dissolved Calcium and Magnesium concentrations, because it is a property of water due to dissolved divalent cations. Hardness from total Ca/Mg is normally comparable to Dissolved Hardness in non-turbid waters.
Ion Balance using Total Metals		EC101A Waterloo - Environmental	Water	APHA 1030E	Cation Sum (using total metals), Anion Sum, and Ion Balance are calculated based on guidance from APHA Standard Methods (1030E Checking Correctness of Analysis). Minor ions are included where data is present. Ion Balance cannot be calculated accurately for waters with very low electrical conductivity (EC).
Langelier Index using Laboratory pH (Ca-T)		EC105A Waterloo - Environmental	Water	APHA 2330B	Langelier Index provides an indication of scale formation potential at a given pH and temperature, and is calculated as per APHA 2330B Saturation Index. Positive values indicate oversaturation with respect to CaCO <sub>3</sub> . Negative values indicate undersaturation of CaCO <sub>3</sub> . This calculation uses laboratory pH measurements and provides estimates of Langelier Index at temperatures of 4, 15, 20, 25, 66, and 77°C.
Nitrate and Nitrite (as N) (Calculation)		EC235.N+N Waterloo - Environmental	Water	EPA 300.0	Nitrate and Nitrite (as N) is a calculated parameter. Nitrate and Nitrite (as N) = Nitrite (as N) + Nitrate (as N).
Total Silicon as Silica (Calculation)		EC420.SiO <sub>2</sub> Waterloo - Environmental	Water	N/A	Total Silicon (as SiO <sub>2</sub> ) is a calculated parameter. Total Silicon (as SiO <sub>2</sub> mg/L) = 2.139 x Total Silicon (mg/L).

Preparation Methods		Method / Lab	Matrix	Method Reference	Method Descriptions
Preparation for Ammonia		EP298 Waterloo - Environmental	Water		Sample preparation for Preserved Nutrients Water Quality Analysis.
Preparation for Dissolved Organic Carbon for Combustion		EP358 Waterloo - Environmental	Water	APHA 5310 B (mod)	Preparation for Dissolved Organic Carbon
Dissolved Metals Water Filtration		EP421 Waterloo - Environmental	Water	APHA 3030B	Water samples are filtered (0.45 um), and preserved with HNO <sub>3</sub> .
Dissolved Mercury Water Filtration		EP509 Waterloo - Environmental	Water	APHA 3030B	Water samples are filtered (0.45 um), and preserved with HCl.
Pesticides, PCB, and Neutral Extractable Chlorinated Hydrocarbons Extraction		EP660 Waterloo - Environmental	Water	EPA 3511 (mod)	Samples are extracted from aqueous sample using an organic solvent liquid-liquid extraction.

## Notes:

RDL = Reportable Detection Limit

MW = Monitor Well

- = Not analysed/No criteria

&lt; = Parameter below detection limit

&lt;(0.0) = Parameter below elevated detection limit

0.0 = above criteria

<sup>3</sup> Based on Coarse-grained soil conditions.

Samples collected by AMEC for all samples from 2007 to 2012.

Analysis of samples from 2013 and 2014 was completed by Maxxam Analytics Inc. in Bedford, NS.

Data to November 2012 transcribed from the 2012-2013 Annual Report of Activities for the Upper Trinity South (New Harbour) Waste Disposal Site completed by AMEC, dated March 29, 2013.

Data from November 2012 to October 2017 transcribed from the Annual Report of Activities for the Upper Trinity South (New Harbour) Waste Disposal Site available from ECC website.

<sup>1</sup> Typical Reportable Detection Limit referenced based on Maxxam laboratory analysis, but RDL may be lower than shown for original data.<sup>2</sup> Ontario Ministry of the Environment (MOE) "Soil, Ground Water and Sediment Standards for Use Under Part XV.1 of the Environmental Protection Act", April 15, 2011, Table 3: Full Depth Generic Site Condition Standards in a Non-Potable Ground Water Condition

Notes:

Analysis completed by AGAT Laboratories for all samples collected in Dec 2021 &amp; Feb 2022.

Analysis completed by ALS Labs for samples collected in Jan 2023

Data from December 2021 and February 2022 transcribed from the Annual Report of Activities for the Upper Trinity South (New Harbour) Waste Disposal Site available from ECC website.

<sup>1</sup> Typical Reportable Detection Limit referenced based on ALS laboratory analysis, but RDL may be lower than shown for original data.<sup>2</sup> Based on Coarse-grained soil conditions.<sup>3</sup> Atlantic RBCA Tier I Environmental Quality Standards (EQS) for Groundwater of Human Health, for a commercial site with coarse grained soil, non-potable groundwater (July 2021, updated July 2022)<sup>4</sup> Atlantic RBCA Tier I EQSs for Groundwater, for the protection of Ecological Health, for a commercial site with coarse grained soil >10 m away from a fresh water (July 2021, updated July 2022).

Notes:  
 RDL = Reportable Detection Limit  
 SW = Surface Water

Analysis completed by AMEC for all samples from 2007 to 2012.

Analysis of samples from 2013 was completed by Maxxam Analytics Inc. in Bedford, NS.

Data to November 2012 transcribed from the 2012-2013 Annual Report of Activities for the Upper Trinity South (New Harbour) Waste Disposal Site completed by AMEC, dated March 29, 2013.

- = Not analysed/No criteria

< = Parameter below detection limit

0.0 = above criteria

\* Typical Reportable Detection Limit reference based on Maxxam laboratory analysis, but RDL may be lower than shown for original data.

\*\* Canadian Council of Ministers of the Environment (CCME) Canadian Water Quality Guidelines for the Protection of Freshwater Aquatic Life (2007 - Update 7.1).

(1)- Elevated reporting limit due to sample matrix

## Notes:

RDL = Reportable Detection Limit

SW = Surface Water

Data from February 2007 to November 2012 transcribed from the 2012-2013 Annual Report of Activities for the Upper Trinity South (New Harbour) Waste Disposal Site completed by AMEC and dated March 29, 2013.

Analysis for December 2021 and January 2022 samples were completed by BV Labs in Bedford, NS.

Analysis completed by ALS Labs for samples collected in Jan 2023.

&lt; = Parameter below detection limit

0.0 = above criteria  
(1)- Elevated reporting limit due to sample matrix

\* Typical Reportable Detection Limit reference based on ALS laboratory analysis, but RDL may be lower than shown for original data.
