## **1) Executive Summary**

The Newfoundland and Labrador Department of Environment and Conservation (NLDOEC) regulates industrial effluent under the Environmental Control Water and Sewage Regulations (ECWSR). In April 2009, an amendment was made to the ECWSR that affected the mining, petroleum, and pulp and paper industrial sectors operating in the province. The amendment adopted specific limits from the corresponding federal regulations for each of these respective industrial sectors. Industries operating under a certificate of approval from the Pollution Prevention division have effluent streams identified and subsequent monitoring schedules developed to characterize the effluent. These schedules are designed to ensure that the effluent discharged from the industry meets regulatory requirements and is protective of the receiving environment.

Copies of the ECWSR, Metal Mining Effluent Regulations, the Pulp and Paper Effluent Regulations and the Petroleum Refinery Liquid Effluent Regulations can be obtained at:  
[www.assembly.nl.ca/Legislation/sr/Regulations/rc030065.htm](http://www.assembly.nl.ca/Legislation/sr/Regulations/rc030065.htm)  
<http://www.canlii.org/en/ca/laws/regu/sor-2002-222/latest/sor-2002-222.html>  
<http://www.canlii.org/en/ca/laws/regu/sor-92-269/latest/sor-92-269.html>  
<http://www.canlii.org/en/ca/laws/regu/crc-c-828/latest/crc-c-828.html>

In 2009 there were more than 20 industries reporting effluent quality to the NLDOEC on a consistent basis. This report is designed to provide a brief summary of the effluent quality discharged at the major industries within the province of Newfoundland and Labrador. It is important to note that the summaries provided are for the major locations at each industry and for the parameters for which compliance can be ascertained only. Most industries conduct additional monitoring for general water quality characterization at the discharge points as well as other locations in proximity to operations.

It is important to note, even though the amendment occurred, the tables that follow indicate the limits from the ECWSR prior to the April 2009 amendment. Some of the exceedences noted may not be valid for May to December 2009. For example, at mines, prior to April 2009, ammonia had a limit of 2 mg/l; subsequent to the amendment, there was no limit. The first quarter limits were carried through and will be adjusted in the 2010 annual report.

### **Disclaimer:**

- The data presented is based upon reports submitted to the NLDOEC by industry, as of March 31, 2010.
- The actual laboratory documentation is available upon request to verify analysis as required.
- Some of the tables in this report indicated zero values. These are actually non-detected values and the detection limits can be made available upon request. For ease of manipulation, zeros were utilized.
- Average pH values have been corrected to reflect the logarithmic nature of the parameter.
- Bioassays are total number of daphnia magna and rainbow trout tests completed. Some industries monitor only rainbow trout and others monitor both.

## **2) Metal Mines**

### **a) Anaconda Mining Inc.**

Anaconda Mining Inc. has one discharge location at the Polishing Pond outflow. The effluent monitoring program for compliance consists of 14 parameters and an acute lethality test (ALT). In 2009, between 1 and 4 samples per month were taken for the months of January, and March-September (13 samples total) for water quality determination. There were no samples collected in February, October, November or December. Total dissolved solids (TDS) exceed the allowed concentration 3 times in 2009, copper was reported as higher than the allowed discharge concentration once, and ammonia exceeded the allowed concentration a total of 9 times. ALT occurred during each month that samples were taken, and both daphnia magna and rainbow trout failed this test twice. See Table 1: Anaconda Mining Inc. 2009 Effluent Discharge Criteria Summary.

### **b) Crew Gold (Canada) Ltd.**

Crew Gold (Canada) Ltd. has one discharge location at the Polishing Pond. The effluent monitoring program consists of 10 parameters along with ALT. There was no discharge during the months of January, February, June, and September. For the remainder of the year there was one sample taken per month, with 2 samples being taken in April. There was one ammonia sample that was above 2 mg/l, and all ALT analysis passed. See Table 2: Crew Gold (Canada) Ltd. 2009 Effluent Discharge Criteria Summary.

### **c) Iron Ore Company of Canada (IOCC)**

Iron Ore Company of Canada has five discharge points, FDP- MD5, FDP-TIA (Julienne Narrows), FTP-Hakim Culvert, PD 19, and PD 28. The effluent monitoring program for FDP-MD5, FDP-TIA and FDP-Hakim Culvert discharge points consists of 14 parameters and ALT. PD 19 monitors for TPH only, and PD 28 has 5 parameters. In 2009, FDP-MD5 did not have any discharge from January-April and December, with 24 samples taken throughout the remainder of the year. There were no exceedences for MD5. FDP-TIA had a total of 49 samples taken, with no exceedences. FDP-Hakim Culvert did not have any discharge from January-March, with 38 samples taken during the remainder of the year. Exceedences included 1 for TSS, 12 for ammonia, and 14 for nitrate. There were 14 ALTs performed, and rainbow trout failed 3 times. PD 19 and PD 28 each had 12 samples taken, and there were no exceedences. In 2009, Wabush Lake was designated as the tailings impoundment area (TIA) under the Metal Mining Effluent Regulation (MMER). See Table 3: Iron Ore Company of Canada 2009 Effluent Discharge Criteria Summary.

## Anaconda-Effluent Summary 2009

	Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sept	Oct	Nov	Dec	Year to Date
<b>Polishing Pond</b>

Table 3: Continued (all values in mg/l, unless otherwise specified)

#### **d) Rambler Metals and Mining Canada Ltd.**

Rambler has one discharge point that empties into South Brook pond. The effluent monitoring program consists of 14 parameters and ALT for compliance. In 2009, there was no discharge for February, August, and December. For the remainder of the year, 11 samples were taken. Of the samples collected, there were 5 instances when TDS exceeded the allowed discharge criteria. There were 3 ALTs taken throughout the year, and all passed. See Table 4: Rambler Metals and Mining 2009 Effluent Discharge Criteria Summary.

#### **e) Teck Resources Ltd.**

Teck Resources Ltd., Duck Pond Mine has one discharge point at Polishing Pond outlet (DamC). The effluent monitoring program for discharge criteria compliance consists of 14 parameters and ALT. In 2009, there was no discharge during the month of February. For the remainder of the year, 28 samples were taken. Of the samples collected, ammonia exceeded allowed discharge criteria 14 times, and copper exceeded 3 times. Of the 11 bioassay tests, daphnia magna failed 4 times. See Table 5: Teck Resources Ltd. 2009 Effluent Discharge Criteria Summary.

#### **f) Vale Inco Newfoundland and Labrador Ltd. (Voisey's Bay Mine/Mill Project Site)**

Vale Inco Mine Site has one discharge point at the Water Treatment Plant (Treated Effluent Discharge). The effluent monitoring program consists of 14 parameters and ALT for discharge criteria compliance. In 2009, there were a total of 54 samples taken. Of the samples collected, TDS exceeded allowable discharge criteria 40 times, and pH exceeded once. Of the 51 bioassay tests, rainbow trout failed 21 times, while daphnia magna failed 50 times. The Voisey's Bay Mine Site has experienced intermittent toxicity issues at the wastewater treatment plant. They are currently conducting an extensive toxicity identification evaluation (TIE) program to identify the source of toxicity, and as such, a larger number of bioassays are being conducted than are actually required. As part of this TIE, a pilot plant has been designed and it currently in operation on site, with expectations of a full scale plant being built in 2010-2011. See Table 6: Vale Inco (Mine Site) 2009 Effluent Discharge Criteria Summary.

#### **g) Wabush Mines**

Wabush Mines has 6 discharge points, Flora Lake, East Pit Dewatering East, Deep Well, Knoll Lake, West Pit Settling Pond, and Tailings Discharge. The effluent monitoring program consists of 11 parameters and ALT for discharge compliance. In 2009, 46 samples were taken at Flora Lake discharge, East Pit Dewatering East, Deep Well, and West Pit Settling Pond. TSS exceeded allowable discharge criteria 4 times at Flora Lake, 20 times at East Pit Dewatering East, and 3 times at West Pit Settling Pond. The only additional exceedences occurred at East Pit Dewatering East, with 1 for iron, and 4 for ammonia. ALTs were performed 8 times at Flora Lake, with one Rainbow Trout failure; and 4 times at East Pit Dewatering East and West Pit Settling Pond, with no failures. Thirty-five samples were taken from Knoll Lake, with TSS exceeding the allowable discharge criteria 14 times. All four ALTs passed. Thirteen samples were obtained from Tailings Discharge. The only exceedences of the allowable discharge criteria were 9 TSS. In 2009, Flora Lake was designated as Wabush's TIA under MMER. See Table 7: Wabush Mines 2009 Effluent Discharge Criteria Summary.

### **3) Petroleum Refining**

#### **a) North Atlantic Refining Ltd.**

North Atlantic has one discharge point, which empties into Placentia Bay. The effluent monitoring program for discharge criteria compliance consists of 6 parameters, plus continuous flow monitoring, and ALT analysis. In 2009, a total of 156 samples were collected from the discharge area. Of the samples collected, exceedences included; 8 in oil and grease, 45 in ammonia nitrogen, and 14 in TSS. See Table 8: North Atlantic Refining Ltd. 2009 Discharge Criteria Summary.

### **4) Pulp and Paper**

#### **a) Abitibi-Consolidated Company of Canada – Grand Falls Division**

Abitibi-Consolidated Company of Canada has one discharge point at the combined North Sewer. The effluent monitoring program for discharge criteria compliance consists of 2 parameters (TSS and BOD) and ALT. In 2009, there were 365 TSS samples taken, and 176 BOD samples taken. It should be noted however, that production ceased as of March 2009. All parameters were of acceptable quality and all ALTs passed. See Table 9: Abitibi Bowater Grand Falls 2009 Effluent Discharge Criteria Summary.

#### **b) Corner Brook Pulp and Paper Ltd.**

Corner Brook Pulp and Paper Ltd. has two discharge points, Secondary Clarifier (Effluent Treatment) and East Sewer. The effluent monitoring program for discharge compliance consists of 2 parameters (TSS and BOD) and ALT. In 2009, there were 365 TSS samples taken, and 157 BOD samples taken. All parameters were of acceptable criteria, and all ALTs passed. See Table 10: Corner Brook Pulp and Paper 2009 Effluent Discharge Criteria Summary.

### **5) Thermal Generating**

#### **a) Newfoundland and Labrador Hydro**

The Holyrood Thermal Generating Station (HTGS) has two discharge locations; the continuous basin outfall, and the periodic basin (batch reactor). The effluent discharge is being monitored for 5 parameters and ALT analysis for discharge criteria compliance. In 2009, the continuous basin did not having any discharge during the month of August. During the remainder of the year, 43 samples were taken, with no violations on any of the parameters listed in the HTGS discharge criteria. Of the 10 ALTs performed, there were 2 failures for rainbow trout. The periodic basin had a total of 36 samples taken, again with no violations of discharge criteria. All ALTs for the periodic basin passed. See Table 11: Holyrood Thermal Generating Station 2009 Effluent Discharge Criteria Summary.

Table 11: Continued (all values in mg/l, unless otherwise specified)

## **6) Other**

### **a) Atlantic Barite**

Atlantic Barite is operated as a zero discharge site, and did not require any emergency discharge during 2009.

### **b) Atlantic Minerals Ltd.**

Atlantic Minerals Ltd. has 3 discharge points; Site #1, Site #2, and Duck Pond (DL-HC Quarry). The effluent monitoring program for discharge criteria compliance consists of 11 parameters. In 2009, discharge only occurred during June and August. There were no exceedences at any of the sites. See Table 12: Atlantic Minerals Ltd. 2009 Effluent Discharge Criteria Summary.

### **c) Beaver Brook Antimony Mine Inc.**

Beaver Brook Antimony Mine Inc. has one discharge point at Site 16. The effluent monitoring program for discharge criteria compliance consists of 14 parameters and ALT analysis. In 2009, discharge occurred during the months of May, July, Sept, November, and December. There were 10 samples taken, with no exceedences of the allowable discharge criteria. All ALTs passed. See Table 13: Beaver Brook Antimony Mine Inc. 2009 Effluent Discharge Criteria Summary.

### **d) Newfoundland Transshipment Terminal**

Newfoundland Transshipment Terminal has 9 discharge points; Tank No. 1 – Sump No. 1, Tank No. 2 – Sump No. 2, Tank No. 3 – Sump No. 3, Tank No. 4 – Sump No. 4, Tank No. 5 – Sump No. 5, Tank No. 6 – Sump No. 6, Support Tank/Sump 7, Containment Pond, and Oily Water Tank Separator. The effluent monitoring program for discharge criteria compliance consists of 3 parameters, with ALT analysis at Containment Pond and Oily Water Tank Separator. There were no exceedences of the allowable discharge criteria, and there was only 1 fail for ALT, at Containment Pond. See Table 14: Newfoundland Transshipment Terminal 2009 Effluent Discharge Criteria Summary.

### **e) Vale Inco Newfoundland and Labrador Ltd. (Argentia Hydrometallurgical Demonstration Plant)**

Vale Inco, Argentia Hydrometallurgical Site has one discharge point at the polishing pond. The effluent monitoring program for discharge criteria compliance consists of 14 parameters and ALT. In 2009, there was discharge for the months of March, April, September, and November only. A total of 5 samples were taken, with no exceedences of the allowable discharge criteria. All ALTs passed. See Table 15: Vale Inco (Argentia) 2009 Effluent Discharge Criteria Summary.

### **f) Vale Inco Newfoundland and Labrador Ltd. (Long Harbour Hydrometallurgical Plant)**

Vale Inco, Long Harbour Hydrometallurgical Plant had 12 active discharge points; D2, D3, D5, and D11-D19, during 2009. Site D1, D4, and D6-D10 did not have any discharge. In 2009, there was no discharge from January-August for discharge points D2, and D12. There were 11 samples collected for D2, with TSS exceeding allowable

discharge criteria 9 times, and pH and ammonia exceeding once. There were 15 samples for D12, with 12 TSS exceedences. For D13, there was no discharge from January-September, with 13 samples collect during the remainder of the year. There were 5 TSS exceedences and 1 pH. Discharge points D3, D5, D11, D15, D17, and D18 had discharge during November and December only. There were 7 samples collected from each of these sites, and the only exceedences, other than TSS, of allowable discharge criteria occurred at D11, where there were also 3 ammonia exceedences, and 4 pH exceedences. TSS exceeded 7 times as D3, 4 times at D11, D15, and D17, and twice at D5 and D18.

Discharge points D14 and D16 had discharge during the month of November only. There was 1 sample taken from each site, with TSS exceeding discharge criteria at D14. D19 had discharge during December only. There were 4 samples taken during this month, and no exceedences of allowable discharge criteria occurred. See Table 16: Vale Inco (Long Harbour) 2009 Effluent Discharge Criteria Summary.

## **7) Conclusion**

The NLDOEC regulates effluent discharged from the industrial sectors of the province. As can be concluded from this short summary report, the nature of these industries and the types of effluent generated are very different and specific; no two industries can be viewed exactly the same. Differences within the industrial facilities and the receiving environment make this a dynamic field that has to be constantly followed.

The industries operating within Newfoundland and Labrador are diligent in working with the NLDOEC to achieve the mutual goals of environmental sustainability and protection.

For further information related to industrial effluent quality and monitoring within Newfoundland and Labrador, please contact:

**Abbreviations and Acronyms**

## **Abbreviations and Acronyms**

ALT – Acute Lethality Test

BOD – Biological Oxygen Demand

ECWSR – Environmental Control Water and Sewer Regulations

HTGS – Holyrood Thermal Generating Station

IOCC – Iron Ore Company of Canada

MMER – Metal Mining Effluent Regulations

NLDOEC – Newfoundland and Labrador Department of Environment and Conservation

TDS – Total Dissolved Solids

TIA – Tailings Impoundment Area

TIE – Toxicity Identification Evaluation

TPH – Total Petroleum Hydrocarbons

TSS – Total Suspended Solids
