

## **Acknowledgments**

The THM monitoring program and the preparation of this report would not have been possible without the generous support and cooperation of a number of people. A high level of appreciation is extended to those who had a vision to improve drinking water quality across the province and thus, initiated a regular THM monitoring program in 1996.

The THM monitoring program is successful mainly due to the hard work of three Watershed Management Specialists; Floyd Barnes, Robert Wight and Ian Bell of the Water Resources Management Division. These specialists spend a significant portion of their time in the field and office, collecting water samples for THM analysis as well as disseminating THM data and liaising regularly with the municipalities.

Our deepest thanks and appreciation are extended to Renée Wiseman who assisted in the preparation and compilation of this report along with other activities relating to the THM monitoring program.

We are grateful to Dr. Anil Beersing, Manager of Hydrologic Modelling Section, Water Resources Management Division, for his assistance and support during the preparation of this report, in particular the data analysis and interpretation. We are also grateful to Paul Neary, Computer Systems Analyst, Water Resources Management Division for his continuous technical support in the maintenance of the databases and dissemination of the data to the public.

We are thankful to Ken Dominic, Assistant Deputy Minister, Environment Branch, Department of Environment and Labour; Martin Goebel, Director, Water Resources Management Division; Sean Kelly, Director, Communications Division; Wayne Churchill, Executive Director, Department of Municipal and Provincial Affairs; Darrell Johnson, Health Analyst, Department of Health and Community Services; Michèle Giddings and Don Wigle, Health Canada, for their review and comments on earlier drafts of this report.

Appreciation is expressed to municipal governments across the province for their participation and financial contribution in the THM monitoring program. Also, thanks are extended to Health Canada which provided partial financial support to carry out THM monitoring and data management.

Finally, thanks are extended to the staff at the Environment Canada Laboratory in St. John's and the New Brunswick Environment Analytical Services Laboratory in Fredericton, for their support and cooperation in carrying out the extensive THM analysis.
