# Real Time Water Quality Monthly Report <br> Leary's Brook <br> August 2005 

## General

- Data from the Leary's Brook monitoring station is monitored by the Water Resources Management Division staff on a monthly basis.

## Maintenance and Calibration of Instrumentation

- The following table displays the dates when the Datasonde was removed for routine cleaning, maintenance and calibration and when it was redeployed during the month of August.

Table 1: Table of Datasonde removal and installation dates

| Date Installed | Date Removed |
| :--- | :--- |
|  | August 01, 2005 |
| August 1, 2005 | August 12, 2005 |
| August 14, 2005 | August 24, 2005 |

- Water quality readings were taken with a Minisonde at the time of removal for comparison purposes. The Minisonde was calibrated prior to use.
- Water samples were taken on August 24, 2005 for laboratory analysis as part of QA/QC procedures.

## Data Interpretation

- Areas in the graphs where the data lines go abruptly down to the x axis and show no data occur when the datasonde is removed for routine cleaning, maintenance and calibration. The dates where this occurs correspond to Table 1 above.
- In general, water quality parameters were stable during the month of August with expected daily/nightly (diurnal) and seasonal changes occurring.
- Stage height (water level) rose and fell in response to daily precipitation as seen in Figure 1. Increases in stage height correspond to precipitation events as seen in Table 2.
- Water temperature fluctuated in response to daily maximum and minimum air temperature. This is demonstrated by comparing the graph in Figure 2 to the air temperature data in Table 2. Warmer water temperatures correspond to warmer air temperatures experienced from August $7^{\text {th }}$ to August 14.

Table 2: Weather information for St. John's, NL provided by Environment Canada

| Daily Data Report for August 2005 |  |  |  |  |  |  |  |  |  |  |  |

Figure 1
Figure 2

- Conductivity levels fluctuated throughout the month with several notable spikes as observed in Figure 3. These spikes usually occurred in response to precipitation events.
- Total dissolved solids (Figure 4) levels reflected the changes in conductivity. Conductivity measurements are a good indication of total dissolved solids and total dissolved ion concentrations, although this is not an exact linear relationship.

Figure 3

Figure 4

- The technical problem with the pH probe that occurred in July was resolved. $\mathbf{p H}$ levels for the month of August ranged between 6.57 to 7.45 . There were some exceedances above the CCME recommended Guideline for Freshwater Aquatic Life of 6.5 (see Figure 5). The average pH level for August was 7.06. (see Table 3).
- The technical problems that were experienced with the Dissolved Oxygen (DO) probe were resolved with the installation of a new DO probe. Dissolved oxygen levels ranged between $3.4 \mathrm{mg} / \mathrm{L}$ to $9.2 \mathrm{mg} / \mathrm{L}$ during the period of measurement (see Figure 6). During the month of August, dissolved oxygen measurements were below the CCME recommended maximum guideline of $9.5 \mathrm{mg} / \mathrm{L}$. The average DO level for the period of measure was $6.8 \mathrm{mg} / \mathrm{L}$ (see Table 3).

Figure 5

Figure 6

- Turbidity levels fluctuated and had several minor spikes noted throughout the month. The turbidity spikes (see Figure 7) are normally in response to precipitation. A large notable turbidity spike occurred mid month between August $10^{\text {th }}$ to the $12^{\text {th }}$. No significant precipitation was noted during mid-month so the large turbidity spike must be due to other factors. Many turbidity spikes exceeded the CCME recommended maximum of 8 NTU above background levels.

Figure 7

## Additional Information

- Table 3 provides summary statistics on water quality parameters for Leary's Brook during the month of August 2005.

Table 3: Summary statistics for August 2005.

|  | Water | pH | Conductance | Dissolved | Percent | Dissolved | Turbidity |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |

|  | Temperature |  |  | Solids | Saturated | Oxygen |  |
| :--- | ---: | ---: | ---: | ---: | ---: | ---: | ---: |
| Max | 20.9 | 7.45 | 565 | 0.36 | 97.4 | 9.2 | 1350 |
| Min | 14.13 | 6.57 | 78.3 | 0.05 | 37.1 | 3.4 | 0 |
| Average | 16.69838 | 7.05969 | 391.6639724 | 0.251429 | 70.2178413 | 6.837210448 | 27.71626 |
| Standard <br> Deviation | 1.25512 | 0.236784 | 52.05945261 | 0.033583 | 14.5614537 | 1.4534392 | 101.5932 |
