## Worksheet 15: Calculating Average Speed, Distance, and Time

## ANSWERS

1. Calculate the average speed of a car that travels 70 km in 1.5 hours.
$v_{a v}=46.7 \mathrm{~km} / \mathrm{h}$ (rounded to one decimal places)

2. How long does it take a person running at a rate of $4 \mathrm{~m} / \mathrm{s}$ to run a distance of 260 m ?
$\Delta t=65$ seconds
3. How far would a snowmobiler travel in 0.5 hours at a rate of $25 \mathrm{~km} / \mathrm{h}$ ?
$\Delta \mathrm{d}=12.5 \mathrm{~km}$
4. Melanie ran the 100 meter race in 12 seconds. What was her average speed?
$v_{a v}=8.3 \mathrm{~m}$ (rounded to one decimal point)
5. If a boat sailed for 6 hours at an average speed of $55 \mathrm{~km} / \mathrm{h}$, what distance did the boat travel? $\Delta \mathrm{d}=330 \mathrm{~km}$
6. How much time did it take a plane flying at $575 \mathrm{~km} / \mathrm{h}$ to travel a distance of 1700 km ?
$\Delta t=2.96$ hours (rounded to two decimal places)
$\Delta \mathrm{t}=3.0$ hours (rounded to one decimal point)
