FROM	TO	DESCRIPTION
0.0	47.5	OVERBURDEN:
47.5	608.0	GREENSTONE: Fine grained, dark grey green, generally silicified, with considerable epidote and patches of carbonate and quartz.
		47.5 - 105' Feebly magnetic.
		125 - 143' do
		351 - 354' Scattered minor shreds of chalcopryite usually associated with epidote.
		174 - 375' Feebly magnetic.
		426.5 - 440.2' Chlorite, epidote and carbonate alteration with very fine crystalline pyrite.
		440.8' Carbonate patch with boundary of soft purple translucent mineral (fluorspar).
		470 - 475.7' Chlorite, epidote and carbonate alteration, lineation 30° - 40°.
		532.0' Minor pyrite.
		550.0' Magnetite stringer with minor pyrite, 1" wide.
		395.0 - 575' Feebly magnetic.
		592 - 592.5' Minor pyrite in carbonate.
