GULLBRIDGE MINES LIMITED

Date: April 1, 1952. 64 + 72 N and 71' W. of "2 W." base line Hole No. G.B. 64

Logged by P. Sonnenfeld Bearing: N.E. Dip: 89° No tests

Property: Nfld. Concession 0.0 - 3.2' N.X.T. core
3.2 - 5.0' A.X.T. core
6.4 - 31.0

Hole started: March 28, 1952.
Hole finished: March 31, 1952.
All casings pulled.

NOTE: This hole is located on group of claims #3423, 3424, 3427, 3428, 3431 and 3432.

From	To	Description
0.0	27.7	Overburden: large boulders.
27.7	30.0	Fine-grained, medium green andesite, with some hornblende and chlorite developed, epidote and zoisite nests and fracture-fillings, calcite and quartz fracture-fillings and occasional pyrite specks.
30.0	32.5	Very fine-grained, brownish-grey, highly silicic tuff (rhyolitic tuff); finely banded and locally crenulated, with some sericite developed. The upper contact forms an angle of 41.5° with the core axis
32.5	45.1	Fine-grained, medium green andesite, similar to 27.7 - 30.0, slightly sheared at an angle of 33° with the core axis.
45.1	48.5	Very fine-grained, brownish-grey tuff, similar to. 30.0 - 32.5 The upper contact forms an angle of 44° with the core axis.
48.5	51.7	Fine-grained medium green andesite, similar to 32.5 - 45.1
51.7	52.2	Very fine-grained brownish-grey tuff, similar to 30.0 - 32.5
52.2	52.6	Fine-grained, medium green andesite, similar to 32.5 - 45.1
52.6	52.9	Very fine-grained, brownish-grey tuff, similar to 30.0 - 32.5
52.9	57.6	Fine-grained, medium green andesite, similar to 32.5 - 45.1
57.6	59.1	Very fine-grained, dark green, andesitic tuff, with some hornblende developed.
59.1	60.9	Fine-grained, medium green andesite, similar to 32.5 - 45.1.
60.9	61.5	Very fine-grained, dark green, andesitic tuff, similar to 57.6 - 59.1
61.5	119.5	Fine-grained, medium green andesite, similar to 32.5 - 45.1
119.5	120.2	Very fine-grained, grey, rhyolitic tuff, with some quartz and abundant hematite fracture-fillings.
120.2	120.3	Fine-grained, medium green andesite, similar to 32.5 - 45.1, but with hematite and pyrite fracture-fillings. The upper contact forms an angle of 41.5° with the core axis.
	120.3	End of hole.
