

GULLBRIDGE MINES LIMITED

Date: Jan. 15, 1951. 56 - 00S. & 480E. of #1 base line, E. along line Hole No. G.B. 113
(Bearing)

Logged by: L. Hudson

Dip: 50° Property: Gull Pond, Nfld.

0.0 collared at -50°

No A.X.T. core

350.0 - 50° - 43°

750.0 - 46° - 39°

Hole started: December 23rd, 1951. Hole finished: January 8th, 1952. All casing pulled.

From	To	description
0.0	17.0	Overburden: sand & small boulders
17.0	81.7	Very fine grained, light grey rhyolite and minor interjected silicic tuff; locally sheared, with pronounced quartz injections, and quartz phenocrysts, core badly broken.
81.7	101.8	Fine-grained, dark grey-green, altered, andesitic tuff, with pronounced epidote fracture-fillings. Some local jasper bands.
101.8	108.5	Very fine-grained, light grey, sheared rhyolite, with pronounced quartz injections.
108.5	109.8	Tuff similar to 81.7-101.8
109.8	143.8	Very fine-grained, light grey to purple, sheared and altered rhyolite, with abundant quartz injections and occasional epidote fracture-fillings. (with feldspar phenocrysts and chilled contacts.
143.8	159.4	(Fine grained, -medium grained, medium green porphyritic diorite
159.4	180.0	Rhyolite phenocrysts; similar to 109.8-143.8
180.0	192.8	Fine grained, dark, green-black andesite.
192.8	203.1	Very fine-grained, white to grey, sheared and altered rhyolite, with abundant epidote developed and quartz fracture-fillings.
203.1	213.6	Fine grained, -medium grained, dark green amphibolite, with quartz injections and epidote developed.
213.6	239.4	Very fine grained, grey to black; somewhat crenulated, silicic tuff, with abundant quartz fracture-fillings, and epidote developed locally.
239.4	269.0	Fine grained, light grey, sheared and metamorphosed sediments; highly silicified, with numerous quartz fracture-fillings.
269.0	310.4	Very fine grained, light grey, rhyolite, with numerous quartz fracture-fillings.
310.4	518.1	Fine grained, brown-grey, silicic tuff; locally crenulated with occasional quartz injections and minor euhedral pyrite. 310-322-feldspar phenocrysts.

From	To	Description
518.1	657.0	Fine grained to medium grained, medium green-grey, quartz-felds; porphyry(dacite ?) 645-647; sand seam
657.0	750.0	Fine-grained, dark green-black, andesite; porphyritic in part, with abundant epidote developed in fracture-fillings, feldspar phenocrysts and quartz fracture-fillings locally.
	750.0	End of Hole.
