

PROPERTY		PAGE 1	
LOCATION	53,650 24,850	BEARING	East
LOGGED BY	H.W.O.	ELEVATION	9,985
STARTED	March 29, 1970	DIP	-65
FINISHED	April 3, 1970	FINAL DEPTH	404.0'
CASING	66'	TESTS (CORRECTED)	
CORE SIZE	AW	SECTION 131	

FROM	TO	DESCRIPTION
0.0	66.0	Water and overburden.
66.0	105.0	Rhyolite tuff - Light to medium grey, slightly siliceous with moderate cordierite. 91.5 - 94.5 purplish red jasper as found in the iron formation, formation similar to the rhyolite. 94.5 - 104.0 light grey, minor chlorite and moderate quartz. 104.0 - 105.0 purplish red jasper.
105.0	130.0	Bluish grey fine grained with moderate quartz carbonate and minor epidote veining from 10 - 40 deg. to the core.
130.0	135.5	Andesite - Bluish grey, fine grained with strong chlorite minor cordierite alteration, 2 - 3% po, py mineralization.
135.5	142.5	Rhyolite - Light grey, fine grained siliceous with 45 deg. quartz veining.
142.5	158.0	Tuff - Light to medium grey, siliceous, moderate injected quartz, banding at 45 deg. 143.0 - 144.5 purplish red jasper as described above and found in the iron formation. 150.0 - 158.0 light grey, banding from 10 - 40 deg. to the core, chlorite, cordierite alteration, at 156' 3" of 10 - 15% po, py with a trace of cp.
158.0	193.5	Andesite - Greenish grey, fine grained, slightly chloritic with quartz and epidote veining from 10 - 40 deg. to the core, similar to the # 3 andesite.
193.5	218.0	Tuff - Light grey, fine grained, siliceous with intense quartz banding at 40 - 45 deg. to the core, strong cordierite minor chlorite. 215 - 216 lost core. 218 - 231 core has an andesitic appearance, only minor quartz present, strong chlorite. 243.5 - 247.0 lost core.
218.0	232.0	Andesite - Light to medium grey with strong chlorite moderate cordierite, minor epidote and quartz veining.

CORE SIZE _____

FROM	TO	DESCRIPTION
232.0	270.5	Tuff - Light to medium grey, siliceous, moderate chlorite, cordierite alteration, minor disseminated py from 238 - 259. 259 - 263 1 - 2% po, py.
270.5	327.5	# 3 Andesite - Medium grey to greenish grey, fine grained with moderate quartz carbonate and epidote veining, very poor core recovery from 287 - 311. Lost core 290 - 302, 308 - 311.
327.5	348.0	Andesite - Bluish grey, fine grained strong chlorite, cordierite alteration, 2 - 3% po, py with tr. cp at 333 and 338.
348.0	404.0	Andesite - Blue grey fine grained with intense chlorite and possible talc alteration trace of py. core badly broken from 373 - 404.
	404.0	END OF HOLE Hole cemented, casing pulled.
