#### Introduction

One of the goals of the Health Workforce Planning Division is to provide policy makers with information about the supply and distribution of health professionals in Newfoundland and Labrador (NL). In collaboration with the Regional Health Authorities (RHAs), the Health Workforce Planning Division conducts a bi-annual survey of health workforce vacant positions by profession, excluding physicians; this report focuses on data collected on April 1, 2014 as well as historical trending of vacant positions data. The number of vacant positions is collected as a point-in-time statistic meaning that RHAs submit only those positions that are vacant on a specified date of collection, rather than a summation of all vacant positions over the entire period.

#### Methodology

A vacancy begins when the request to fill the vacancy (with all required approvals) is <u>received</u> in the <u>Human Resources Department</u>. In previous reports, a vacancy was created when the position was <u>posted</u>. As a result of this change, the vacancy period, or number of days that a position has been vacant, may be longer than in previous iterations of this report. Further information on vacancies collection, including definitions, is available in the Methodological Notes section.

The Health Human Resource Information System (HHRIS) is used to collect vacancy data. The results are summarized in this report in two sections: Registered Nurse Vacant Positions and Health Professional External Recruitment Postings. The HHRIS allows RHAs to accurately report the number of days that a position has been under recruitment (Report 2-A); this indicator can be used to measure recruitment difficulty. There are numerous other indicators that could also determine whether a position is difficult-to-fill that are beyond the scope of this report including turnover, location, education requirements and workforce demographics.

## What do Health System Vacancies mean to Newfoundland and Labrador?

Health professional positions represent a large employment sector in NL. The RHA workforce in our province is a skilled and dedicated group of more than 20,000 individuals, representing almost 9 per cent of the entire provincial workforce of 228,000 people. These people form the teams that provide quality healthcare services for the people of NL, from routine blood tests to complicated surgery.

Health services have created strong demand for health professionals across the province. Though not the only labour market indicator, the number of vacancies is one measure of whether a profession is facing increased demand and/or decreased supply.

### **Section 1: Registered Nurse Vacant Positions**

Registered Nurse (RN) vacancies include all vacant RN positions in a RHA, regardless of whether the position is being advertised to internal employees of the organization only, external to the public, or if the position has not been posted for recruitment. RN vacancies include permanent, temporary, and casual positions.

#### **Current Status:**

In April 2014, the number of RN bargaining unit vacant positions posted external to the RHA was 197 positions. This represents 53 per cent of all RN bargaining unit vacancies. In addition, 175 RN bargaining unit vacancies were posted internal only (47 per cent of vacant positions). In 2013-14, there were 5,666 RNs employed in RHAs, the most ever recorded.

Acknowledging the constant internal movement of employees, policy makers are primarily concerned with the number of RN vacancies that have been posted for candidates external to the RHA. The number of external recruitment postings for RN positions declined 90 per cent between April 2009 and October 2012 (Figure 1), but the number of vacant positions has increased in the last three collection periods to levels recorded in 2010.

Figure 1. RN External Recruitment Postings, 2008-2014

Recruitment incentives over the past few years, such as bursaries and signing bonuses, has increased new graduate recruitment and reduced the number of RN external recruitment postings over the past several years. Although RHAs reported an increase in external recruitment postings in April 2014, caution is noted that 66 per cent of the 197 RN external recruitment postings were for casual positions, and 18 per cent were temporary positions. Only 16 per cent

of vacant RN positions posted for recruitment in April 2014 were for permanent positions (Figure 2).

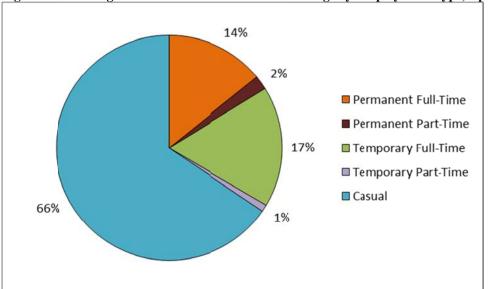

Figure 2. Percentage of RN External Recruitment Postings by Employment Type, April 2014.

The number of casual RNs tends to vary in each RHA. Eastern Health's requirements are influenced by its larger workforce, the nature of working in tertiary care settings, growth factors, waitlist reduction initiatives, and the need for workforce replacements. Casual employees may work significantly less than full-time hours. In 2007/08, Eastern Health asked 562 nursing employees if they wanted their positions converted from casual to permanent status; 168 accepted. The remaining RNs chose to remain part-time and casual positions.

From 2012 to 2013, RHAs were undertaking a Health Care Management (HCM) Group review process to identify inefficiencies and opportunities to improve operations. As a result, recruitment efforts respecting many vacant positions were placed on hold and some positions that were traditionally permanent were posted as temporary pending the outcome of the review. Since the HCM review completed in 2013, positions that were filled on a temporary basis and would remain in the organization are now able to be re-filled as permanent.

The 197 RN vacant positions in April 2014 included 109 in Eastern Health (10 permanent), 41 in Central Health (5 permanent), 2 in Western Health (2 permanent), and 45 in Labrador-Grenfell Health (15 permanent). These 197 postings included 14 nurse practitioner positions: 6 in Eastern Health, 2 in Central Health, 2 in Western Health and 4 in Labrador-Grenfell Health. Labrador-Grenfell Health also reported 2 vacant regional nurse positions. The average vacancy period for RNs (including nurse practitioners) was 145 days, approximately 5 months. Nurse practitioner positions take longer to recruit than all other RN position categories.

Of the 109 external recruitment postings in Eastern Health, there were 66 in city hospitals and long term care facilities. The remaining positions were located in rural areas outside the St. John's metro area, most notably 9 positions at Carbonear General Hospital and 7 positions at the GB Cross Memorial Health Centre in Clarenville. Of the 10 permanent external recruitment postings in Eastern Health, there were 3 in city hospitals and long term care facilities. The remaining 7 permanent positions were located in rural areas outside the St. John's metro area, most notably 2 at the Grand Bank Health Centre and 2 at the Placentia Health Care Centre.

Central Health reported an increase in externally-recruited RN positions over the past year, from 26 positions in April 2014 to 41 positions in April 2014. These 41 vacant positions included 15 RN positions at the James Paton Memorial Hospital in Gander and 11 RN positions at the Central Newfoundland Regional Health Centre in Grand Falls-Windsor. The remaining positions were located in rural areas, most notably 5 positions at the Green Bay Health Centre. Of the 5 permanent external recruitment postings in Central Health, there were 3 at James Paton Memorial Hospital, 1 at the Mose Ambrose Clinic and 1 at the Lewisporte Community Health Centre.

Western Health reported ongoing recruitment for 1 nurse practitioner vacancy in each of Ramea and Port Saunders. The nurse practitioner position in Ramea is considered difficult-to-fill. Approved incentives for the nurse practitioner position in Ramea include a bursary, signing bonus and market adjustment. Bursaries and signing bonuses have aided the recruitment of new nursing graduates to areas of need in Western Health.

Despite being the smallest RHA in terms of workforce size, Labrador-Grenfell Health had 45 vacant RN bargaining unit positions in April 2014, of which 15 were permanent. Labrador-Grenfell Health reported vacancies in several of its larger facilities, including 14 permanent positions and 6 casual positions at the Labrador Health Centre in Happy Valley-Goose Bay (the remaining permanent position was in Makkovik); and 3 temporary and 8 casual positions at the Captain William Jackman Hospital in Labrador City. An additional 12 casual positions were located mostly in rural areas and 1 temporary part-time position was located in Churchill Falls.

RHAs indicated that 62 per cent of postings were the result of relief pool replacements and 18 per cent were the result of new positions. Other major contributors were: internal transfers (10 per cent), resignations (2 per cent), and maternity leaves (2 per cent). Trends up to last year indicated that internal transfer was the top reason for RN external recruitment postings; however, in recent collection periods, RHAs have reported the need for relief pool replacements as the major reason for external recruitment (Figure 3).

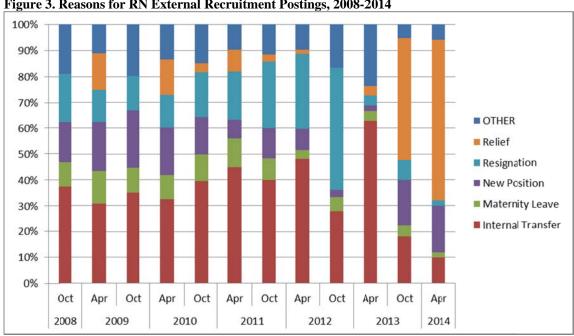

Figure 3. Reasons for RN External Recruitment Postings, 2008-2014

Due to past nursing shortages and movement to a more interdisciplinary team environment, management positions historically filled by RNs may be offered to individuals with other health professional backgrounds and may no longer be considered only RN positions. All vacant management positions in RHAs are collected in Section 2: Health Professional External Recruitment Postings.

Tables: Further detail on RN vacant positions is given in Annex A. Reports are grouped according to classification as follows:

Report	Classification	Description	Page
Report 1 – A	Bargaining Unit	RHA / Sector / Facility / Posting Type	17
В	Bargaining Unit	RHA / Employment Type / Sector / Posting Type	19
C	Bargaining Unit	RHA / Employment Type / Facility / Posting Type	21
D	Bargaining Unit	RHA / Times Series	24
Е	Bargaining Unit	RHA / Vacancy Reason / External Recruitment Postings	25

#### **Section 2: Health Professional External Recruitment Postings**

External recruitment postings include only vacant positions that are being actively recruited external to the RHA. They only represent a proportion of total health system vacant positions. Internal recruitment postings represent movement in the organization, and are not included in this analysis. It is possible that a position may be vacated for a period of time due to illness / injury / other leave, and the RHA will not advertise the position externally. Rather, the RHA may choose to backfill the position with relief staff or overtime. These positions are not included in this analysis.

Positions in this section are grouped into three main occupation categories: primary occupations, ancillary-clinical occupations and ancillary-support occupations. Definitions are provided in the Methodological Notes section.

#### Current Status:

Over the past six years, there has been considerable fluctuation in the number of external recruitment postings (Figure 4). Between 2008 and 2010, external recruitment postings decreased from 528 to 191. Successful recruitment was a key contributor in this decrease. RHAs may have also chosen to discontinue selected external recruitment postings due to poor recruitment results such as lack of suitable candidates or no applicant pool. In 2011, the number of external recruitment postings increased but did not reach previously high levels. The following year, in 2012, the number of external recruitment postings decreased again, reminiscent of 2010 data. At that time, RHAs indicated that many vacant positions were not under active recruitment pending the outcomes of the HCM review as stated previously. The number of external recruitment postings increased to 574 in April 2013 but down again to 400 in October 2013.

The number of external recruitment postings in April 2014 was 853 positions, a significant increase from the previous April 2013 data collection. The 853 external recruitment positions in April 2014 was the highest number on record; previously, it was 574 in April 2013.

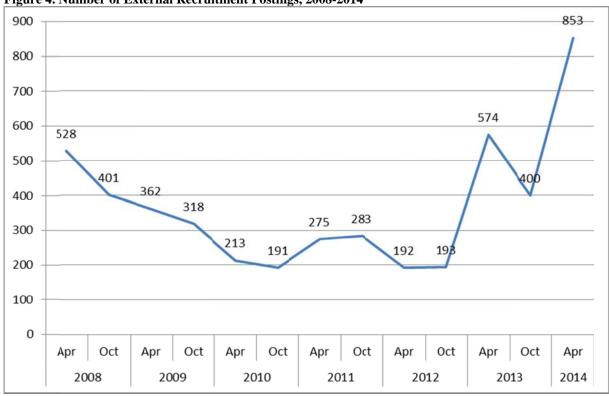

Figure 4. Number of External Recruitment Postings, 2008-2014

Eastern Health reported the highest number of external recruitment postings in April 2014 at 576, which represented 68 per cent of all external recruitment postings. Central Health reported 154 positions (18 per cent), Western Health reported 24 positions (3 per cent) and Labrador-Grenfell Health reported 99 positions (12 per cent). There was an increase in external recruitment postings in all occupation categories, including primary occupations, ancillary occupations-clinical and ancillary occupations-system. Several factors may have contributed to the increased number of external recruitment postings:

- Many temporary summer positions were posted for recruitment in March 2014. When
  data was collected in April 2014, many of these positions were still in early stages of
  competition and have since been filled.
- An increase in challenges in recruiting licensed practical nurses, personal care attendants, managers, trades workers, laboratory and diagnostic positions.
  - o Recruitment is affected by numerous variables such as availability of students and graduates; position employment type and work hours, and competition from the private sector.
- An increase in external recruitment postings from previous years given that the HCM review is complete and positions that were filled on a temporary basis and will remain in the organization may now be re-filled as permanent.

#### **Primary Occupations:**

In the primary occupations category, 299 positions were posted for external recruitment in April 2014; however, 43 per cent of these postings were temporary call-in. The remaining positions included permanent (33 per cent) and temporary (24 per cent) employment. This is consistent with the percentage distribution of positions by employment type in the previous collection period, October 2013.

RHAs indicated 127 postings for licensed practice nurse positions in April 2014, which is the highest ever recorded by RHAs during the vacancy collection process. It is worth noting the 70 per cent of the 127 licensed practical nurse postings were for temporary call-in positions, which are particularly difficult for recruitment due to the non-guaranteed work hours. Only 13 per cent of the licensed practice nurse positions were for permanent full-time positions, while 17 per cent were for temporary positions (16 per cent full-time and 1 per cent part-time). The increase in recruitment for these positions is primarily due to the need to fill positions at Eastern Health's new long-term care facility in St. John's in September 2014 and the Bonavista Protective Community Residence in October 2014.

RHAs also reported 64 postings for management positions in April 2014, which is an increase from 27 postings in October 2013. This is the highest number of management vacancies ever recorded. Over two-thirds of management vacancies were permanent full-time positions. All RHAs reported management external recruitment postings including 32 positions in Eastern Health, 14 positions in Central Health, 3 positions in Western Health and 15 positions in Labrador-Grenfell Health. Management positions are paid on the HL scale, and include both clinical and non-clinical managers. In April 2014, Eastern Health had three postings for scientists paid on the HL scale, including a clinical microbiologist, molecular geneticist, and senior radiopharmacist / radiochemist. Twelve senior management positions were also being recruited in RHAs, including a Director of Budgeting, Director of Nursing, Director for the Centre for Nursing Studies, Director of Pharmacy Services, Regional Director of Laboratory Medicine, Regional Operations Manager, Vice-President of Nursing / Chief Nurse, Vice-President of Financial and Corporate Services, and four Directors of Site Operations.

External recruitment postings for diagnostics professionals continue to be difficult-to-fill. In April 2014, there were 29 external recruitment postings for medical laboratory technologist positions; however, only 28 per cent were permanent, 7 per cent were temporary and 66 per cent were temporary call-in or casual. There were 9 positions for medical radiation technologists; however, only 22 per cent were permanent, 22 per cent were temporary and 56 percent were temporary call-in or casual. There were also external recruitment postings for 5 combined laboratory/x-ray technologist position, 2 cardiology technologists, 3 electroneurophyiology technologists, and 1 nuclear medicine technologist.

The average vacancy period for primary occupations was 156 days, approximately 5 months. Vacancies for diagnostics professionals, clinical psychologists and medical flight specialist positions have average vacancy periods of almost one year or more. Incentives have been used successfully to fill vacancies in health professional groups over the past few years such as bursaries, signing bonuses and salary continuance. It is expected that continuation of incentives will help in recruiting and retaining health professionals.

#### **Ancillary-Clinical Occupations:**

There were 221 external recruitment postings for ancillary-clinical positions in RHAs, including 160 personal care attendant positions of which 134 positions were in Eastern Health. This is the highest ever recorded by RHAs during the vacancy collection process. It is worth noting that, similar to licensed practice nurses, 69 per cent of the 160 personal care attendant postings were for temporary call-in positions, which are particularly difficult for recruitment due to the non-guaranteed work hours. 27 per cent were permanent positions (12 per cent full-time and 15 per cent part-time) and 4 per cent were temporary positions (1 per cent full-time and 3 per cent part-time). Again similar to licensed practical nurses, the increase in recruitment for personal care attendants is primarily due to the need to fill permanent and temporary call-in positions at Eastern Health's new long-term care facility in St. John's in September 2014 and the Bonavista Protective Community Residence in October 2014.

RHAs also reported 13 external recruitment postings for medical laboratory assistants, and all were temporary call-in positions. 12 paramedic positions were being actively recruited by RHAs in April 2014, and most of these positions were also temporary call-in or casual.

RHAs also reported 13 social assistance worker positions being recruited externally, down from 40 positions in October 2013. Twelve of these positions were being recruited for the new Treatment Centre for Youth with Complex Mental Health Needs in Paradise. Only two of those positions were permanent full-time, and the remaining 10 positions were temporary call-in.

The average vacancy period for ancillary-clinical occupations reduced from 92 days in October 2013 to 89 days in April 2014 (3 months). RHAs report that some occupations, such as occupational therapy support workers and paramedics, may take longer to recruit.

#### **Ancillary-Support Occupations:**

The ancillary-support category, which includes occupation groups such as administrative, dietary, facilities/skilled trades, housekeeping and laundry had the highest percentage increase in external recruitment postings between October 2013 and April 2014. The number of external recruitment postings more than doubled from 117 postings in October 2013 to 333 in April 2014. The majority of postings were for temporary call-in or casual positions in administrative, housekeeping, and dietary (food services). 75 per cent of vacancies were temporary call-in.

The number of postings for facilities / skilled trades occupations increased from 37 in October 2013 to 43 in April 2014. Almost three-quarters of facilities/skilled trades postings were permanent full-time positions.

**Table 1. Trades Worker External Recruitment Postings – April 2014** 

Occupation	<b>Number of Vacancies</b>
Electrical	7
Plumbing	7
Power Engineer	7
Maintenance Repairer	5
Mechanical	2
Painter	2
Engineering Technician	2
Millwright	1
Other	10
TOTAL	43

The average vacancy period for ancillary-support occupations reduced from 161 days in October 2013 to 133 days in April 2014 (4 months). Facilities/skilled trade positions have been posted for an average of 10 months. Recruitment of skilled trade workers may be more difficult due to increased competition from the private sector.

#### Reasons for Vacancies

The top reasons for vacancies included relief pool replacement (59 per cent), new positions (11 per cent), resignations (8 per cent), internal transfers (6 per cent) and maternity leave (4 per cent). Further analysis by reason for vacancy is provided in Table 2.

Table 2. Reason for Health Professional Vacancy – April 2014

<b>Reason for Vacancy</b>	<b>Number of Vacant Positions</b>	<b>Percentage of Vacant Positions</b>
Relief	500	59%
New Position	91	11%
Resignation	68	8%
Internal Transfer	54	6%
Maternity Leave	30	4%
Retirement	27	3%
Sick Leave	13	2%
Leave of Absence	8	1%
Termination	3	0%
Other	59	7%
<b>Grand Total</b>	853	100%

## **Tables**

Report	Classification	Description	Page
Report 2 – A	All occupations, except RN	Occupation / RHA / Employment Type / Recruitment	29
В	All occupations, except RN	Occupation / Time Series	31
С	All occupations, except RN	Top 5 Reasons for Vacancy by Occupation	33

### **Methodological Notes**

### **Definitions**

#### **Ancillary Occupations - Clinical**

These are individuals that do not fit the <u>Primary Occupations</u> category but may provide direct patient care or diagnostic services, and generally work under the direction of primary occupations. Examples include medical laboratory assistants, personal care attendants, and recreation therapy workers.

#### **Ancillary Occupations – Support**

These are individuals that support the system. They do not fit the <u>Primary Occupations</u> or <u>Ancillary Occupations – Clinical</u> categories. Examples include laundry, dietary, housekeeping, and information systems staff.

#### **Primary Occupations**

Primary occupations provide direct patient care, diagnostic services, or manage the health system (including clinical and non-clinical managers). They also meet one or more of the following conditions: there exists a regulatory body and/or professional association, and/or their post-secondary educational background is generally in excess of a single year (i.e. technologist vs. technician). Examples include registered nurses, psychologists, medical laboratory technologists, and speech language pathologists.

#### **Temporary Unassigned Vacancy or Posting (Casual or Temporary Call-In)**

A position that has no set schedule and employees are requested to work on an as-needed basis. Casual and temporary call-in employees provide relief for other employees on various types of leave and cover short-term / unpredictable increases in workloads. There may be a limited number of casual and temporary call-in employees available due to time of year, location, and expertise area.

- Casual: In the Newfoundland and Labrador Nurses' Union (NLNU) and Association of Allied Health Professionals (AAHP) collective agreements, these employees are called "casual." These employees have no obligation to the RHA to come when they are called and the RHA has no obligation to call any one particular employee.
- Temporary call-in: In the Newfoundland and Labrador Association of Public and Private Employees (NAPE) and Canadian Union of Public Employees (CUPE) collective agreements, these employees are called "temporary call-in." Temporary call-in employees are called to work in order of seniority. They are obligated to work

when called; seniority is forfeited if a temporary employee refuses to report for work at least three times when called

#### Vacancy or Posting (Permanent, Temporary, and Float)

A position that is available to another candidate because the previous incumbent has left the position or is on leave from the position for more than thirteen (13) weeks, or it is a new position. This does not include temporary unassigned postings.

A vacancy begins when the request to fill the vacancy (with all required approvals) is received in Human Resources. In previous reports, a vacancy was created when the position was <u>posted</u>. As a result of this change, the vacancy period, or number of days that a position has been vacant, may be longer than in previous iterations of this report.

#### Point-in-Time

The number of vacant positions is collected as a point-in-time statistic meaning that RHAs submit only those positions that are vacant on a specified collection date, rather than a summation of all vacant positions over the entire period. The number of vacant positions is collected twice annually: April 1 and October 1, as well as trending of vacant positions data over time.

#### Time of Year

The number of vacancies is volatile and can change on a daily basis. Changes are due to a number of factors:

- Time of year more vacancies in spring and summer due to need for summer relief
- New government initiatives (for example, wait times)
- Skill mix changes
- Equipment changes or new equipment
- After a RHA has initiated a strategy to reduce workforce vacancies

April/May is the time of year when the majority of summer recruitment occurs, therefore the number of positions being recruited is usually higher than other times throughout the year. This is also the time when most students are finished their final exams, and although they do not graduate until May, RHAs will advertise and may hire students prior to graduation. Also, throughout fall and winter, as employees leave the organization, there is generally a small pool from which to recruit until new graduates are available in the spring.

#### Posting Type

For the purposes of this report, vacancies are classified into two categories:

- External recruitment posting
- Posted internal only

External recruitment postings are the primary interest of policy makers as a measure of the number of individuals that need to be recruited external to the organization in order to fill vacant positions. In previous versions of the Health Professional Vacant Position Report, external recruitment postings were divided into two categories: posted both internal and external, and posted external only. When an employee leaves an organization or moves to a new position, the vacant position is almost always posted for internal competition, as required by the collective agreement, before being posted for an external candidate. These vacancies were previously classified as posted both internal and external. In instances where a position is immediately advertised for an external candidate without having been posted internally, the vacancy was previously classified as posted external only. Starting in October 2010, external recruitment postings refer to all positions that were posted external to the RHA, regardless of whether they were initially posted for internal candidates.

There is, and always will be, internal movement within RHAs. Another employee may apply for and be accepted into the vacant position, causing another internal vacancy, etc. Because of the nature of internal postings, they cannot be considered explicitly as an indication of a need for additional, externally-supplied health professionals. It is also noted that vacancies may not be posted if the RHA decides not to fill a position due to budgetary constraints or program changes.

#### Notes:

- 1. Vacancy data in April 2006 for Health and Community Services St. John's Region (as included under Eastern Health) was unavailable. Therefore, vacancies for Eastern Health and the resulting health system total vacancies may be understated, and caution should be noted.
- 2. Between October 2006 and April 2013, Western Health Care Corporation (as included under Western Health) only provided data on 'difficult to fill' positions for this quarter, and estimates for non- 'difficult to fill' vacancies were derived from external advertising sources. External advertising sources only provide information on vacant positions that may be filled by applicants external to the organization, and does not indicate any positions to be filled internally. Therefore, vacancies for Western Health and the resulting health system total vacancies may be understated, and caution should be noted.
