## Introduction

One of the goals of the Health Workforce Planning Division is to provide policy makers with information about the supply and distribution of health professionals in Newfoundland and Labrador (NL). In collaboration with the Regional Health Authorities (RHAs), the Health Workforce Planning Division conducts a bi-annual survey of health workforce vacant positions by profession, excluding physicians; this report focuses on data collected on October 1, 2013 as well as historical trending of vacant positions data. The number of vacant positions is collected as a point-in-time statistic meaning that RHAs submit only those positions that are vacant on a specified date of collection, rather than a summation of all vacant positions over the entire period.

## Methodology Changes from Previous Reports

A vacancy begins when the request to fill the vacancy (with all required approvals) is received in the Human Resources Department. In previous reports, a vacancy was created when the position was posted. As a result of this change, the vacancy period, or number of days that a position has been vacant, may be longer than in previous iterations of this report. Further information on vacancies collection, including definitions, is available in the Methodological Notes section.

In October 2013, the Health Human Resource Information System (HHRIS) was used for the first time to collect vacancy data. The results are summarized in this report in two sections: Registered Nurse Vacant Positions and Health Professional External Recruitment Postings.

Previously, there was a third component of this report: Difficult-to-Fill Vacant Positions. In previous versions of this report, there was no standard definition of "difficult-to-fill" across all health-related occupations, and RHAs indicated difficult-to-fill vacancies based on their experience recruiting for the position and whether the position was vacant for at least two months. The new HHRIS allows RHAs to accurately report the number of days that a position has been under recruitment (Report 2-A); this new indicator can be used as a more precise measure of recruitment difficulty. The number of days that a position has been vacant is now included in the two remaining sections: Registered Nurse Vacant Positions and Health Professional External Recruitment Postings. There are numerous indicators that could also determine whether a position is difficult-to-fill that are beyond the scope of this report including turnover, location, education requirements and workforce demographics.

## What do Health System Vacancies mean to Newfoundland and Labrador?

Health professional positions represent a large employment sector in NL. The RHA workforce in our province is a skilled and dedicated group of more than 20,000 individuals, representing almost 9 per cent of the entire provincial workforce of 230,000 people. These people form the
teams that provide quality healthcare services for the people of NL, from routine blood tests to complicated surgery.

Health services have created strong demand for health professionals across the province. Though not the only labour market indicator, the number of vacancies is one measure of whether a profession is facing increased demand and/or decreased supply.

## Section 1: Registered Nurse Vacant Positions

Registered Nurse (RN) vacancies include all vacant RN positions in a RHA, regardless of whether the position is being advertised to internal employees of the organization only, external to the public, or if the position has not been posted for recruitment. RN vacancies include permanent, temporary, and casual positions.

## Current Status:

In October 2013, the number of RN bargaining unit vacant positions posted external to the RHA was 115 positions. This represents 64 per cent of all RN bargaining unit vacancies. In addition, 64 RN bargaining unit vacancies were posted internal only ( 36 per cent of vacant positions). In 2012-13, there were 5,518 RNs employed in RHAs, the most ever recorded.

Acknowledging the constant internal movement of employees, policy makers are primarily concerned with the number of RN vacancies that have been posted for candidates external to the RHA. The number of external recruitment postings for RN positions declined 90 per cent between April 2009 and October 2012 (Figure 1), but the number of vacant positions has increased in the last two collection periods.

Figure 1. RN External Recruitment Postings, 2008-2013.

Recruitment incentives over the past few years, such as bursaries and signing bonuses, has increased new graduate recruitment and reduced the number of RN external recruitment postings over the past several years. Although RHAs report increases in external recruitment postings during the last two collection periods, caution is noted that, in October 2013, over half the 115

RN external recruitment postings were for casual positions, and 20 per cent were temporary positions. Only 28 per cent of vacant RN positions posted for recruitment in October 2013 were for permanent positions (Figure 2).

Figure 2. Percentage of RN External Recruitment Postings by Employment Type, October 2013.

The number of casual RNs tends to vary in each RHA. Eastern Health's requirements are influenced by its larger workforce, the nature of working in tertiary care settings, growth factors, waitlist reduction initiatives, and the need for workforce replacements. Casual employees may work significantly less than full-time hours. In 2007/08, Eastern Health asked 562 nursing employees if they wanted their positions converted from casual to permanent status; 168 accepted. The remaining RNs chose to remain part-time and casual positions.

From 2012 to 2013, RHAs were undertaking a Health Care Management (HCM) Group review process to identify inefficiencies and opportunities to improve operations. As a result, recruitment efforts respecting many vacant positions were placed on hold and some positions that were traditionally permanent were posted as temporary pending the outcome of the review. Since the HCM review completed in 2013, positions that were filled on a temporary basis and would remain in the organization are now able to be re-filled as permanent.

The 115 RN vacant positions in October 2013 included 45 in Eastern Health, 34 in Central Health, 3 in Western Health, and 33 in Labrador-Grenfell Health. These 115 postings included 11 nurse practitioner positions: 4 in Eastern Health, 1 in Central Health, 2 in Western Health and

4 in Labrador-Grenfell Health. Labrador-Grenfell Health also reported 2 vacant regional nurse positions. The average vacancy period for RNs (including nurse practitioners) was 131 days, approximately 4 months. Nurse practitioner positions take longer to recruit than all other RN position categories.

Of the 45 external recruitment postings in Eastern Health, there were 21 in city hospitals and long term care facilities including 12 at the Health Sciences Centre. There were 24 located in rural areas outside the St. John's metro area, most notably 6 positions at Carbonear General Hospital and 4 positions at the Harbour Lodge Nursing Home in Carbonear.

Central Health reported an increase in externally recruited RN positions over the past 6 months, from 2 positions in October 2012 to 34 positions in October 2013. These 34 vacant positions included 14 RN positions at James Paton Memorial Hospital in Gander of which 10 permanent full-time positions have since been filled and 4 temporary full-time positions are still vacant. Another 9 positions ( 1 temporary full-time and 8 casual) were being recruited externally at the Central Newfoundland Regional Health Centre in Grand Falls-Windsor, and 11 positions (2 temporary full-time, 1 temporary part-time and 8 casual) were located in rural communities.

Western Health reported 1 nurse practitioner vacancy in each of Ramea and Port Saunders, and 1 clinical educator vacancy in long term care. As with Eastern Health, bursaries and signing bonuses have aided the recruitment of new nursing graduates to areas of need in Western Health.

Despite being the smallest RHA in terms of workforce size, Labrador-Grenfell Health had 33 vacant RN bargaining unit positions in October 2013. Labrador-Grenfell Health reported vacancies in several of its larger facilities, including 14 at the Labrador Health Centre in Happy Valley-Goose Bay, 5 at the Charles S. Curtis Memorial Hospital in St. Anthony, and 4 at the Captain William Jackman Memorial Hospital in Labrador City. The remaining 9 vacancies were in rural and remote communities. The only permanent full-time positions noted in LabradorGrenfell Health included 8 positions in Happy Valley-Goose Bay, 1 position in Forteau, and 1 position in Natuashish. The remaining 23 vacant positions included 1 permanent part-time, 9 temporary full-time and 12 casual.

RHAs indicated that 47 per cent of postings were the result of temporary relief pool replacements and 18 per cent were the result of internal transfers. Other major contributors were: new positions ( 17 per cent), resignations ( 8 per cent), and maternity leaves ( 4 per cent). Trends over the past several years show that internal transfers is the top reason for RN external recruitment postings; however, in October 2013, RHAs reported more vacancies due to temporary relief pool replacements than have been reported in any previous year (Figure 3).

Figure 3. Reasons for RN External Recruitment Postings, 2008-2013.

International recruitment of RNs has been used to help fill nursing positions in this province. From April 2010 to April 2013, 52 internationally-educated nurses (IENs) were hired in RHAs, including 17 in Eastern Health, 12 in Central Health, and 23 in Labrador-Grenfell Health. Western Health has not been involved in IEN recruitment. Of these 52 IENs, 30 are still employed with RHAs, 14 resigned, 6 were terminated during the probationary period (due to clinical practice issues or failure to pass the Canadian Registered Nurse Examination), and 1 passed away.

Due to past nursing shortages and movement to a more interdisciplinary team environment, management positions historically filled by RNs may be offered to individuals with other health professional backgrounds and may no longer be considered only RN positions. All vacant management positions in RHAs are collected in Section 2: Health Professional Vacant Positions.

## Tables:

Further detail on RN vacant positions is given in Annex A. Reports are grouped according to classification as follows:

| Report | Classification | Description | Page |
| :--- | :--- | :--- | :---: |
| Report 1- A | Bargaining Unit | RHA / Sector / Facility / Posting Type | 13 |
| B | Bargaining Unit | RHA / Employment Type / Sector / Posting Type | 15 |
| C | Bargaining Unit | RHA / Employment Type / Facility / Posting Type | 17 |
| D | Bargaining Unit | RHA / Times Series | 20 |
| E | Bargaining Unit | RHA / Vacancy Reason / External Recruitment <br> Postings | 21 |

## Section 2: Health Professional External Recruitment Postings

External recruitment postings include only vacant positions that are being actively recruited external to the RHA. They only represent a proportion of total health system vacant positions. Internal recruitment postings represent movement in the organization, and are not included in this analysis. It is possible that a position may be vacated for a period of time due to illness / injury / other leave, and the RHA will not advertise the position externally. Rather, the RHA may choose to backfill the position with relief staff or overtime. These positions are not included in this analysis.

Positions in this section are grouped into three main occupation categories: primary occupations, ancillary-clinical occupations and ancillary-support occupations. Definitions are provided in the Methodological Notes section.

## Current Status:

Over the past six years, there has been considerable fluctuation in the number of external recruitment postings (Figure 4). Between 2008 and 2010, external recruitment postings decreased from 528 to 191 . Successful recruitment was a key contributor in this decrease. RHAs may have also chosen to discontinue selected external recruitment postings due to poor recruitment results such as lack of suitable candidates or no applicant pool. In 2011, the number of external recruitment postings increased but did not reach previously high levels. The following year, in 2012, the number of external recruitment postings decreased again, reminiscent of 2010 data. At that time, RHAs indicated that many vacant positions were not under active recruitment pending the outcomes of the HCM review as stated previously.

In 2013, the number of external recruitment postings increased, peaking at 574 in April 2013 but down again to 400 in October 2013. An increase in external recruitment postings from previous years is reasonable, given that the HCM review is complete and positions that were filled on a temporary basis and will remain in the organization may now be re-filled as permanent.

Figure 4. Number of External Recruitment Postings, 2008-2013.

## Primary Occupations:

In the primary occupations category, 169 positions were posted for external recruitment in October 2013; however, 45 per cent of these postings were temporary call-in. The remaining positions included permanent ( 33 per cent) and temporary ( 22 per cent) employment.

RHAs indicated 88 postings for licensed practice nurse positions in October 2013, which is the highest ever recorded by RHAs during the vacancy collection process. Six months prior, in April 2013, the number of licensed practical nurse postings was 59 and in the previous October the number of postings was 13 . It is worth noting the 80 per cent of the 88 licensed practical nurse postings in October 2013 were for temporary call-in positions, whereas 10 per cent were for permanent positions ( 8 per cent full-time and 2 per cent part-time) and 10 per cent were for temporary positions (full-time only).

RHA also reported 27 postings for management positions in October 2013, which is the highest number of management vacancies since October 2010. The majority of management postings ( 20 postings) were located in Eastern Health; there were 5 postings in Labrador-Grenfell Health and 2 in Western Health. Management positions are paid on the HL scale, and include both clinical and non-clinical managers. For all RHAs, in October 2013, there were five postings for scientists paid on the HL scale, including a clinical biochemist, clinical microbiologist, molecular geneticist, scientific specialist - mass spectrometry, and senior radiopharmacist / radiochemist. Five senior management positions were also being recruited in RHAs, including a Director of Quality and Risk Management, Regional Director of Laboratory Medicine, Regional

Director of Pharmacy, Vice-President of Medical Affairs and Vice-President of Financial and Corporate Services.

The average vacancy period for primary occupations was 181 days, approximately 6 months. Although there were only 2 combined laboratory and x-ray (LX) technologist positions posted in October 2013 (both in Eastern Health), it is worth noting that these positions have been under active recruitment for over 2.5 years. Similarly, 2 medical flight specialist positions have been posted for over 3 years. Incentives have been used successfully to fill vacancies in these occupation groups over the past few years such as bursaries, signing bonuses and salary continuance. It is expected that continuation of incentives will help to fill remaining vacancies.

## Ancillary-Clinical Occupations:

There were 114 external recruitment postings for ancillary-clinical positions in RHAs, including 56 personal care attendant positions. Previously, in April 2013, RHAs reported 140 personal care attendant postings; however, 100 were posted by Eastern Health due to personal care attendant conversions from temporary to permanent as a result of skill mix realignments at the Hoyles-Escasoni Complex. These 100 positions were filled almost immediately. Almost 80 per cent of the 56 personal care attendant postings in October 2013 were for temporary call-in positions; only 6 per cent were permanent positions ( 2 per cent full-time and 4 per cent parttime) and 16 per cent were temporary positions ( 2 per cent full-time and 14 per cent part-time).

In October 2013, there were 40 social assistance worker positions being recruited externally. All positions were posted by Eastern Health and 95 per cent were permanent full-time. There has been no vacancies reported for social assistance workers since October 2011; however, these 40 social assistance worker positions are being recruited for the new Treatment Centre for Youth with Complex Mental Health Needs in Paradise to be opened in 2014.

The average vacancy period for ancillary-clinical occupations was 92 days, approximately 3 months. RHAs report that some occupations, such as medical laboratory technicians and paramedics, may take longer to recruit.

## Ancillary-Support Occupations

The ancillary-support category, which includes occupation groups such as administration, dietary, facilities/skilled trades, housekeeping, laundry, and materials, had 117 postings in October 2013. The majority of postings (37) were for facilities / skilled trades occupations as shown in Table 1 below. Almost three-quarters of facilities/skilled trades postings were permanent full-time positions.

Table 1. Trades Worker External Recruitment Postings - October 2013

| Occupation | Number of Vacancies |
| :--- | :---: |
| Trades Worker II - Electrical | 9 |
| Trades Worker II - Plumbing | 7 |
| Trades Worker II - Mechanical | 6 |
| Trades Worker II - Carpentry | 4 |
| Maintenance Repairer I | 4 |
| Trades Worker - Painter | 2 |
| Trades Worker II - Power Engineer 4th Class | 2 |
| Trades Worker II | 2 |
| Engineering Technician II | 1 |
| TOTAL | $\mathbf{3 7}$ |

RHAs also reported 24 postings for administrative positions such as clerks and typists, and 23 postings for housekeeping positions. 45 per cent of administrative positions and 78 per cent of housekeeping positions were temporary call-in.

The average vacancy period for ancillary-support occupations was 161 days, approximately 5 months. Facilities/skilled trade positions have been posted for an average of 8 months. Recruitment of skilled trade workers may be more difficult due to increased competition from the private sector.

## Reasons for Vacancies

In October 2013, RHAs were asked to identify the reasons for vacant positions; previously, this information was only captured for nursing vacancies. The top 5 reasons for vacancies included relief pool replacement ( 40 per cent), new positions ( 22 per cent), internal transfers ( 11 per cent), resignations ( 10 per cent) and retirements ( 5 per cent). Further analysis by reason for vacancy is provided in Table 2 below.

Table 2. Reason for Health Professional Vacancy - October 2013

| Reason for Vacancy | Number of Vacant Positions | Percentage of Vacant Positions |
| :--- | :---: | :---: |
| Relief | 160 | $40 \%$ |
| New Position | 87 | 22 |
| Internal Transfer | 43 | 11 |
| Resignation | 39 | 10 |
| Retirement | 19 | 5 |
| Maternity Leave | 16 | 4 |
| Leave of Absence | 15 | 4 |
| Other | 8 | 2 |
| Sick Leave | 7 | 2 |
| Worker's Compensation | 4 | 1 |
| Termination | 1 | 0 |
| Training | 1 | 0 |
| Grand Total | $\mathbf{4 0 0}$ | $\mathbf{1 0 0 \%}$ |

## Tables

Further detail on external recruitment postings is given in Annex B. Reports are grouped according to classification as follows:

| Report | Classification | Description | Page |
| :--- | :--- | :--- | :---: |

| B | All occupations, <br> except RN | Occupation / Time Series | 24 |
| C | All occupations, <br> except RN | Top 5 Reasons for Vacancy by Occupation | 26 |

## Methodological Notes

## Definitions

## Ancillary Occupations - Clinical

These are individuals that do not fit the Primary Occupations category but may provide direct patient care or diagnostic services, and generally work under the direction of primary occupations. Examples include medical laboratory technicians, personal care attendants, and recreation therapy workers.

## Ancillary Occupations - Support

These are individuals that support the system. They do not fit the Primary Occupations or Ancillary Occupations - Clinical categories. Examples include laundry, dietary, housekeeping, and information systems staff.

## Primary Occupations

Primary occupations provide direct patient care, diagnostic services, or manage the health system (including clinical and non-clinical managers). They also meet one or more of the following conditions: there exists a regulatory body and/or professional association, and/or their post-secondary educational background is generally in excess of a single year (i.e. technologist vs. technician). Examples include registered nurses, psychologists, medical laboratory technologists, and speech language pathologists.

## Temporary Unassigned Vacancy or Posting (Casual or Temporary Call-In)

A position that has no set schedule and employees are requested to work on an as-needed basis. Casual and temporary call-in employees provide relief for other employees on various types of leave and cover short-term / unpredictable increases in workloads. There may be a limited number of casual and temporary call-in employees available due to time of year, location, and expertise area.

- Casual: In the Newfoundland and Labrador Nurses’ Union (NLNU) and Association of Allied Health Professionals (AAHP) collective agreements, these employees are called "casual." These employees have no obligation to the RHA to come when they are called and the RHA has no obligation to call any one particular employee.
- Temporary call-in: In the Newfoundland and Labrador Association of Public and Private Employees (NAPE) and Canadian Union of Public Employees (CUPE) collective agreements, these employees are called "temporary call-in." Temporary call-in employees are called to work in order of seniority. They are obligated to work
when called; seniority is forfeited if a temporary employee refuses to report for work at least three times when called.

## Vacancy or Posting (Permanent, Temporary, and Float)

A position that is available to another candidate because the previous incumbent has left the position or is on leave from the position for more than thirteen (13) weeks, or it is a new position. This does not include temporary unassigned postings.

A vacancy begins when the request to fill the vacancy (with all required approvals) is received in Human Resources. In previous reports, a vacancy was created when the position was posted. As a result of this change, the vacancy period, or number of days that a position has been vacant, may be longer than in previous iterations of this report.

## Point-in-Time

The number of vacant positions is collected as a point-in-time statistic meaning that RHAs submit only those positions that are vacant on a specified collection date, rather than a summation of all vacant positions over the entire period. The number of vacant positions are collected twice annually: April 1 and October 1, as well as trending of vacant positions data over time.

## Time of Year

The number of vacancies is volatile and can change on a daily basis. Changes are due to a number of factors:

- Time of year - more vacancies in spring and summer due to need for summer relief
- New government initiatives (for example, wait times)
- Skill mix changes
- Equipment changes or new equipment, or
- After a RHA has initiated a strategy to reduce workforce vacancies.

April/May is the time of year when the majority of summer recruitment occurs, therefore the number of positions being recruited is usually higher than other times throughout the year. This is also the time when most students are finished their final exams, and although they do not graduate until May, RHAs will advertise and may hire students prior to graduation. Also, throughout fall and winter, as employees leave the organization, there is generally a small pool from which to recruit until new graduates are available in the spring.

## Posting Type

For the purposes of this report, vacancies are classified into two categories:

- External recruitment posting
- Posted internal only

External recruitment postings are the primary interest of policy makers as a measure of the number of individuals that need to be recruited external to the organization in order to fill vacant positions. In previous versions of the Health Professional Vacant Position Report, external recruitment postings were divided into two categories: posted both internal and external, and posted external only. When an employee leaves an organization or moves to a new position, the vacant position is almost always posted for internal competition, as required by the collective agreement, before being posted for an external candidate. These vacancies were previously classified as posted both internal and external. In instances where a position is immediately advertised for an external candidate without having been posted internally, the vacancy was previously classified as posted external only. Starting in October 2010, external recruitment postings refer to all positions that were posted external to the RHA, regardless of whether they were initially posted for internal candidates.

There is, and always will be, internal movement within RHAs. Another employee may apply for and be accepted into the vacant position, causing another internal vacancy, etc. Because of the nature of internal postings, they cannot be considered explicitly as an indication of a need for additional, externally-supplied health professionals. It is also noted that vacancies may not be posted if the RHA decides not to fill a position due to budgetary constraints or program changes.

Notes:

1. Vacancy data for Health and Community Services St. John's Region (as included under Eastern Health) was unavailable. Therefore, vacancies for Eastern Health and the resulting health system total vacancies may be understated, and caution should be noted.
2. Western Health Care Corporation (as included under Western Health) only provided data on 'difficult to fill' positions for this quarter, and estimates for non- 'difficult to fill' vacancies were derived from external advertising sources. External advertising sources only provide information on vacant positions that may be filled by applicants external to the organization, and does not indicate any positions to be filled internally. Therefore, vacancies for Western Health and the resulting health system total vacancies may be understated, and caution should be noted.
