

Labrador Projects

Projects in 2016 include the compilation and publication of research completed on uranium in the Central Mineral Belt and iron ore in the Labrador Trough. This work aims to document the various styles and settings of the important uranium and iron-ore deposits in these areas.

Newfoundland Projects

Field projects in Newfoundland during 2016 included ongoing precious-metal research, particularly on the gold mineralized Silurian rocks of the Dog Bay Line and the Bridal Veil prospect of the Gander Zone. Field work also examined Mississippi Valley-Type Zn-Pb mineralization and environments on the Northern Peninsula and west coast. Laboratory and office research continued on these and other projects.

Uranium - Greg Sparkes

Iron Ore - James Conliffe

**Gold, other - Hamish Sandeman
- Greg Sparkes**

**Base metals - James Conliffe
- John Hinchey**
