The property is located adjacent to the fishing village of Grey River (population of ~ 350 people) on the south coast of Newfoundland.

The Grey River tungsten veins are typical fluorite-rich wolframite-quartz greisen vein deposits. Most of the tungsten mineralization is wolframite with a number of small scheelite occurrences known.

The deposit contains an [Inferred Resource](#) of 1,169,000 tonnes at an average grade of 0.730% WO<sub>3</sub>. A significant potential for additional tungsten reserves exist on the property.

A Positive [Preliminary Economic Assessment](#) was announced in April of 2012.
