**LEGEND**

**ZONES OF AGGREGATE POTENTIAL**

- **Contains granular materials; probability of locating economic deposits is moderate to high**
- **Material of granular composition (e.g., sandy tills and colluvium) that generally contains up to 8 percent silt-clay, but could coarser granular materials**
- **Commonly till, poorly graded and of variable grain size, having a silt-clay content (> 5 and < 15 percent) and stone size**
- **Commonly silty till, silt or clay samples, having silt-clay content > 15 percent**
- **Gravel or sand, having silt-clay content < 5 percent. Deposits are commonly graded and stratified**

**ZONES OF NTS MAP AREA 13C/16**
