Dusty Hill Cu - Co

Map 2: Claims Location and Geology

Geology Source:
Crisby-Whittle, L. V. J. (compiler): 2012: *Bedrock geology dataset for the Island of Newfoundland*. Newfoundland and Labrador Department of Natural Resources, Geological Survey, Open File NFLD/2616 version 7.0.
Mineral Occurrence Source: Mineral Occurrence Database - Geological Survey, Department of Natural Resources Website: <http://www.gov.nl.ca/mines&en/geosurvey>

Highlights:

- New discovery of Co-Cu mineralization
- Grabs up 900 ppm Co and 2500 ppm Cu
- No previous work

The **Dusty Hill Property** is located approx 20 km north of Jackson's Arm on the west side of White Bay, western Newfoundland (NTS 12I/02) (Map 1) and is linked by road to the Trans-Canada Highway. The property is easily accessed from the Jackson's Arm highway via the well-maintained Cat Arm hydroelectric site access road.

Regional Geology

The property lies within the Humber Zone of the Newfoundland Appalachians along the eastern edge of the Proterozoic Long Range Inlier.

Local Geology

The property is underlain by biotite-hornblende-garnet-bearing, granitic to granodioritic gneiss (Owen, 1987). Megacrystic biotite/hornblende granite occurs just to the NE (Map 2).

Previous Work and Mineralization

No previous recorded work has been done in the area. The present owner has discovered new mineralization in the area. **Grabs returned up to 900 ppm Co and 2500 ppm Cu from outcrop.**
